CHART 10

GEOLOGICAL PROFILES 22-26

from the Cape Breton Shelf, northwest Grand Banks, and Laurentian Channel between Cape Breton Island and Newfoundland. Profile locations are shown in Fig. 1. The geologic interpretation was made from high resolution seismic reflection records and indicates the attitude of the Pennsylvanian beds, the degree to which they are faulted, and their relationship to the pre-Pennsylvanian unit. Vertical exaggeration is approximately 30 times.
