The following report is available for inspection in the libraries of the Geological Survey of Canada, 601 Booth Street, Ottawa, Ontario. K1A 0E8, and the Institute of Sedimentary and Petroleum Geology, 3303 - 33rd Street, Calgary 44, Alberta.

Lower Cretaceous Bullhead Group between Bullmoose Mountain and Tetsa River, Rocky Mountain Foothills, Northeastern British Columbia, by D.F. Stott.

Unedited report consisting of 153 pages of text, 20 figures, 3 tables, 15 plates and on appendix containing 35 measured sections. The report gives a detailed stratigraphic description of the Bullhead Group including brief summaries of (a) clay mineralogy of the Gething Formation, by A.E. Foscolos; and (b) the microfauna, mainly Foraminifera, of the Gething Formation, by T.P. Chamney.

Copies of the report will be supplied at the user's expense by application to Orhan's Reproductions and Photomapping Limited, 718-8th Avenue S.W., Calgary, Alberta.
