

### **CGDI Starter Kits**

The "Starter Kits" of the Canadian Geospatial Data Infrastructure (CGDI) are curated bundles of geospatial data delivered as a service. These kits are the result of a user needs assessment commissioned by Natural Resources Canada (NRCan), with a primary focus on addressing the specific requirements of Indigenous, Inuit, and Métis Peoples. Within these kits, you'll discover an extensive collection of over 71,000 datasets falling under the "Nature and Environment" category sourced from CGDI's Federal and Provincial/Territorial partners.

These Starter Kits have been thoughtfully crafted to spotlight the potential of the CGDI with four distinct kits created to showcase its capabilities:

- a) British Columbia
- b) Northwest Territories
- c) Climate Change across Canada
- d) Water Resources across Canada.

Each of these kits represents diverse areas and data categories, offering new users a compact, comprehensive, and user-friendly gateway to explore a wide array of information provided by the CGDI.
