

LEGEND

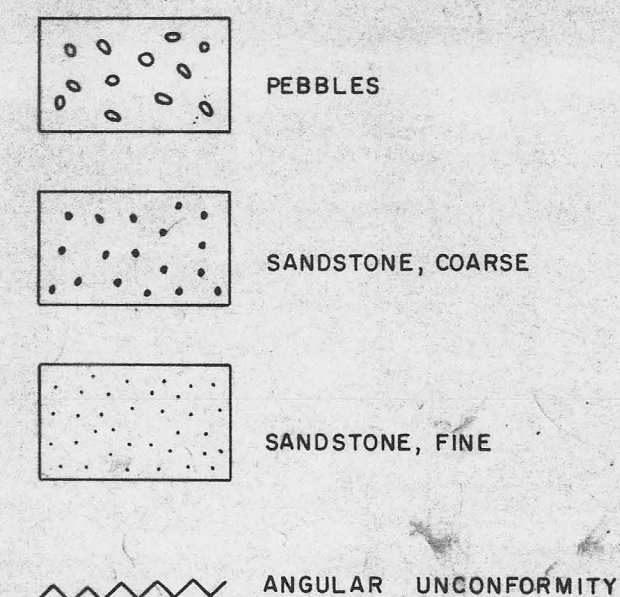

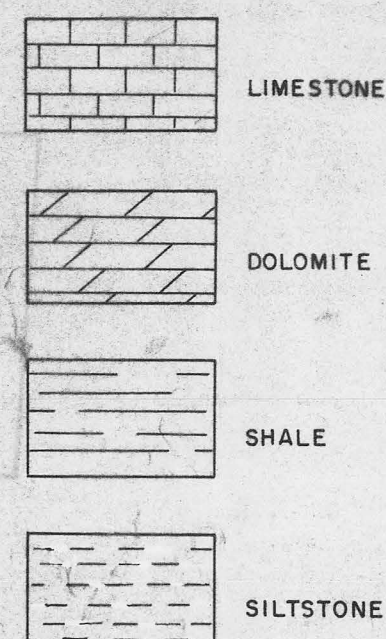

Figure 4. Restored stratigraphic cross-section of Ordovician to Upper Devonian rocks in northeast parts of the Bathurst Island group. On Helena Island the Belcher Channel Formation is Section 10, and older rocks are Sections 12. Members of the Griper Bay formation are shown in Sections 12 and 29. Until mid-Early Devonian time the entire region was part of the miogeosyncline; after that time the eastern parts became transformed into the Cornwallis Fold Belt.
