The following items are being placed on Open File by the Geological Survey of Canada for inspection at its libraries at: 601 Booth Street, Ottawa, K1A 0E8; Institute of Sedimentary and Petroleum Geology, 3303-33rd Street, Calgary T2L 2A7; British Columbia Office, 6th Floor, Sun Building, 100 West Pender Street, Vancouver 3; at the Geological Services Office, Department of Natural Resources, 1620 Blvd. de l'Entente, Quebec 6, P.Q.

02 ... During the 1971-72 Fiscal Year, the Department of Regional Expansion and Economics funded a joint Geological Survey of Canada-Quebec Department of Mines project designed to study geoscientific aspects of a 500 sq. mi. area centred on the new Montreal airport at Ste-Scholastique. "Le Manuel de l'Utilisateur," by Miss M. Kugler is part of the G.S.C. contribution to the project. The report describes how the information on physical properties of unconsolidated deposits was collected in the field and the method of storing it in a data bank. Nature of information and type of computer output (maps and listings) are explained and illustrated. Twenty-two computer maps for the Ste-Thérèse area (1:25,000) illustrate the nature of the information, the versatility of the system and how N.M.I.A.P. planners can request information from the data bank.

This report is available in French only.
