

Cut along this line for use in stereoscope

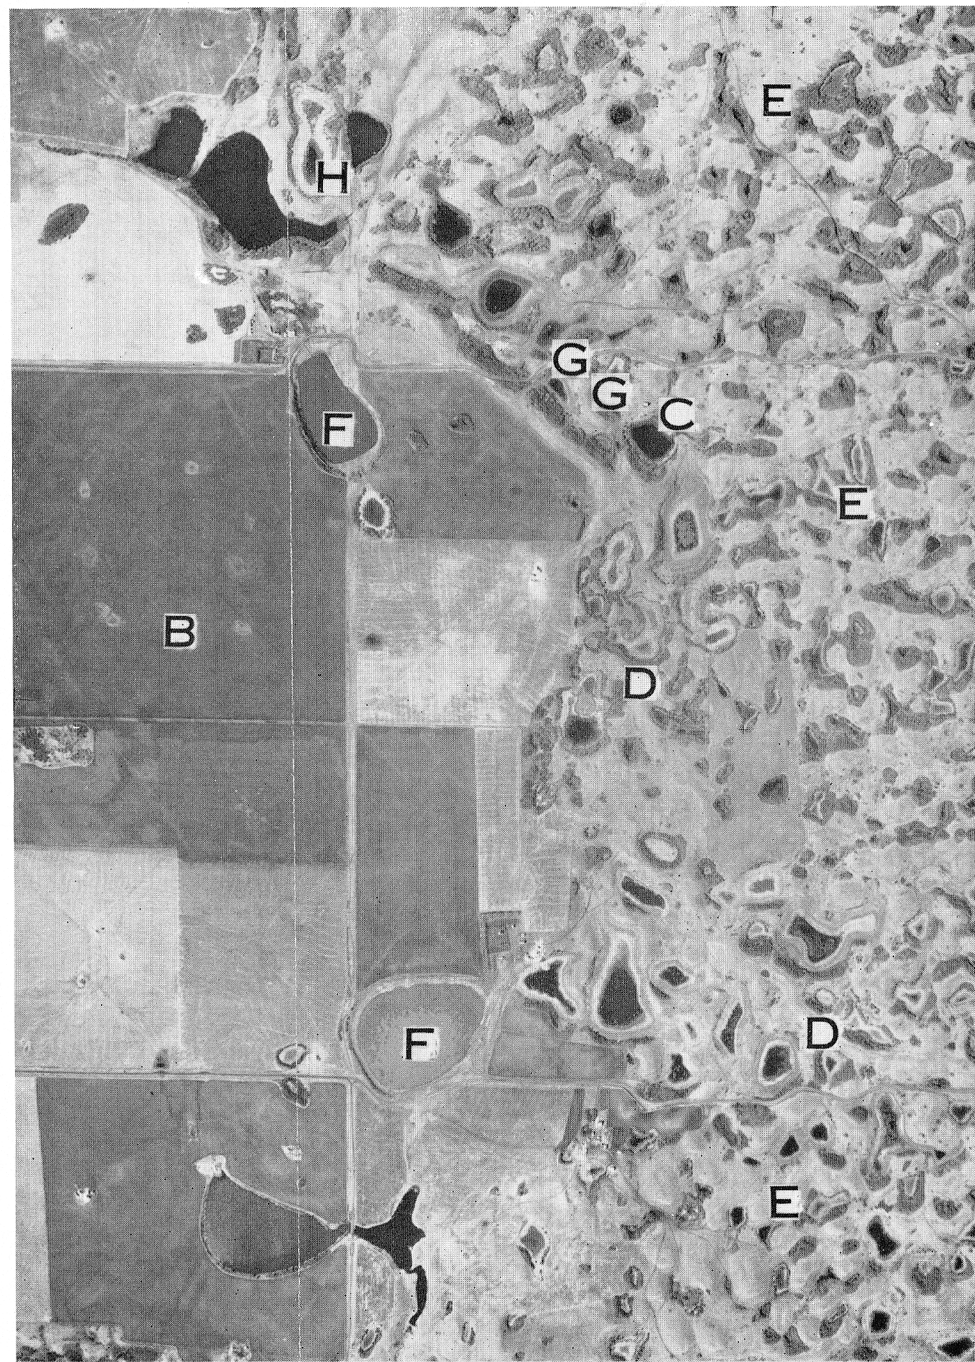

Plate XII. Stereoscopic pair. Fifty-foot-high moraine plateau in well-developed hummocky moraine (E). Notice rim ridge (A) sloping gently towards clay and silt of central part of the plateau (B) and steeply towards the dead-ice hollows (C) bordering the plateau; a 60-foot-high till moraine ridge (D), which is partly a continuation of the rim ridge (A), crosses the hummocky moraine. Notice the kettle ponds (F) on the plateau surface, the incipient rim ridge (G) running parallel to the main rim ridge (A); and moraine ridge encircling dead-ice hollow (H). Tp. 35, rge. 20, W.4th mer.
