Cut along this line for use in stereoscope

Plate XIII. Stereoscopic pairs. Medium-sized, flat-topped moraine plateaux, 40 to 70 feet high, in hummocky moraine. The equally high lineated hills between the larger plateaux are flat-topped, and are thought to be smaller moraine plateaux. The lineation probably reflects the direction of the last ice movement. Tp. 35, rge. 20, W.4th mer.
