

ECHIMAMISH

(EAST SHEET)

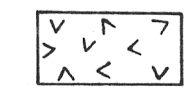

MANITOBA

ADVANCE COPY
SUBJECT TO REVISION

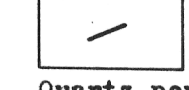

ARCHEAN
(Early Precambrian)

INTRUSIVES

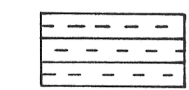

Granite, granite-gneiss and related rocks

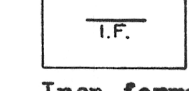

Quartz porphyry dykes and felsitized zones

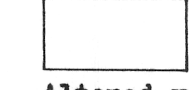

HAYES RIVER GROUP

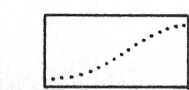

Sediments and derived schists, paragneisses

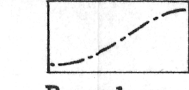

Iron formation

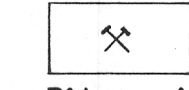

Altered volcanic rocks with intercalated sediments including iron formation, and minor intrusives undifferentiated

Geological boundary, approximate

Boundary of unexplored area

Pit or other workings

LOCALITY NUMBERS REFERRED TO IN REPORT

- 1, 11.....Rust stained schist
- 2.....Quartz vein carrying visible gold
- 3, 4, 5, 6, 7, 8, 12, 13, 14, 15, 16, 17, 18, 19, 22, 23, 25.....Sulphide-bearing felsitized zones and siliceous replacement bodies
- 8, 9, 10, 21.....Quartz vein carrying sulphides
- 20.....Sulphide-bearing felsitized zone with local concentration of zinc blende, galena, chalcoprite, jamesonite and freibergite
- 24.....Quartz replacement bodies carrying disseminated pyrite
