INTRODUCTION

For many years the Geological Survey issued subject indexes to the wide variety of publications produced by the branch. The first covered the period 1863-1884; this was followed by other indexes for the periods 1885-1906, 1907-1909, 1910-1926 and 1927-1950. The expansion of the Geological Survey that followed the Second World War resulted in a great increase in the number of reports published and it proved too time consuming to continue the preparation and production of subject indexes using the then available techniques. However a listing of all publications issued between 1845 and 1958 was published in 1959. Subsequently listings covering varying periods have been made and from time to time these have been combined, the last compilation being the Index to Publications 1959-1974. Annual listings for 1975 and 1976 are also available.

For some years the Geological Survey has participated in the Canadian Index to Geoscience Data, a computer-based system, and during 1977 current input was completed. The input includes subject content as well as publication listing, author, NTS map-area, province or territory, and geological time period. Using this computer based system it is again feasible to produce a comprehensive index to our publications. The assistance given by members of the staff of the Canadian Centre for Geoscience Data is gratefully acknowledged.

This index is to some extent constrained by the overall requirements of the Canadian Index to Geoscience Data. Documents are indexed in the language of publication thus it is not possible directly to produce a bilingual index from the computer output. Prices are not included and to enable this publication to serve as a sales catalogue a separate price list has been added. At present the system does not permit the use of upper and lower case type. However to improve the appearance of the publication various type styles and weights have been used. Some of the concepts used in the subject index are subject to revision; some are too broad others too specific and some concepts that should be included were not included in the thesaurus used by the indexers. These are minor problems compared with the advantage to be gained by providing a general subject index.

A complete subject index in microfiche form will be found at the back of this report. The general subject index is printed with the main report. A limited number of printed copies of the complete subject index (200 pages) are available from the Geological Survey of Canada Publication Distribution Office, Ottawa, Price \$12.50.

Many interim reports are issued as Open File items. A catalogue of all Open Files releases until December 1977 is available. Price \$2.00.

This publication does not include geophysical series maps. Maps indexes that correspond to the 1:1 000 000 National Topographic System are available without charge from all Geological Survey Information Offices.

INTRODUCTION

Depuis de nombreuses années, la Commission géologique publie des index par sujet du vaste éventail de ses publications. Le premier index couvre les publications parues entre 1863 et 1884; les suivants, les périodes 1885-1906, 1907-1909, 1910-1926 et 1927-1950. L'importance accrue que prend la Commission géologique après la Seconde guerre mondiale se traduit par augmentation considérable du nombre de rapports publiés; on constate alors que la préparation et la publication d'index par sujet à l'aide des techniques disponibles prend trop de temps. Toutefois, une liste des publications parues entre les années 1945 et 1958 est publiée en 1959. On dresse, par la suite, d'autres listes couvrant diverses périodes qui sont parfois fusionnées, la dernière compilation étant l'index des publications des années 1969 à 1974. On peut également se procurer une liste des publications pour chacune des années 75 et 76.

La Commission géologique participe, depuis quelques années, à l'index du Centre canadien des données géoscientifiques, système informatisé. Au cours de l'année 1977, sont introduites dans l'ordinateur toutes les données notamment, les sujets, une liste des publications, les auteurs, les cartes du système national de référence topographique, les provinces ou les territoires et les périodes géologiques. Ce système informatique permet également de dresser un index complet de nos publications.

L'établissement de cet index dépend, dans une certaine mesure, des exigences globales de l'index du Centre canadien des données scientifiques. Les documents sont indexés selon la langue de publication; il est donc impossible de dresser un index bilingue à partir de l'imprimé donné par l'ordinateur. Les prix ne sont pas inscrits; une liste de prix a donc été annexée pour que cette publication puisse servir de catalogue de ventes. À l'heure actuelle, ce système ne permet pas l'utilisation de caractères de haut et de bas de casse. Toutefois, on se sert de divers caractères et de diverses couleurs pour améliorer la présentation de ces documents. Certains sujets ne sont pas définitifs; quelques-uns sont trop généraux, d'autres trop précis, et certains sujets, qu'il serait utile d'ajouter, ne figurent pas dans le recueil dont se sont servi les personnes qui ont dressé l'index. Ces problèmes sont toutefois de faible importance par rapport à l'utilité de cet index général.

À l'endos de ce rapport, se trouve un index complet par sujet, sous forme de micro-fiches. L'index général est imprimé avec le rapport principal. On peut se procurer, auprès de la Commission géologique du Canada, des exemplaires, en quantité limitée, de cet index (de 200 pages); il coûte \$12.50.

De nombreux rapports provisoires sont publiés à titre d'articles de dossiers ouverts. On peut se procurer, à un coût de \$2.00, un catalogue de tous les dossiers ouverts publiés jusqu'au mois de décembre 1977.

Cette publication ne comprend pas les cartes de la série géophysique. Les index des cartes du Système national de référence topographique, à échelle de 1/1 000 000, sont disponibles gratuitement à tous les bureaux d'information de la Commission géologique.
