

CANADA
DEPARTMENT OF MINES
GEOLOGICAL SURVEY BRANCH

HON. W. TEMPLEMAN, MINISTER; A. P. LOW, DEPUTY MINISTER;
R. W. BROCK, ACTING DIRECTOR.

1908

- EXPLANATION OF SIGNS
- Glacial striae
 - Streams worked for gold
 - Gold ore
 - Silver "
 - Copper "
 - Molybdenite
 - Arsenic
 - Gold-silver-copper-sulphur
 - Gold-copper-sulphur
 - Silver-copper-sulphur
 - Argentiferous galena
 - Gold-silver-lead-sulphur
 - Gold-silver-lead-copper-sulphur
 - Serpentine
 - Limestone quarries
 - Glaciers
 - Roads
 - Park trails
 - Altitudes in feet above sea level
 - Soundings in feet

NOTE

The mineral signs represent diverse mineralized rather than individual occurrences. While they are usually placed in or near areas where mining operations are being carried on, they do not signify that the points indicated are the only ones in the neighborhood in which mineral occurrence of economic importance are to be found. For example, the Roman numeral between Silver and Arsenic, where it occurs, has been merely mineralized throughout the entire area and therefore its economic value are too numerous to receive individual representation.
