

**LEGEND**

**PROTEROZOIC**

13 Diabase, gabbro

**POST-TIMISKAMING**

12 Hornblende granite

11 Quartz-feldspar porphyry; 11a, feldspar porphyry, some quartz-feldspar porphyry

**KEEWATIN AND TIMISKAMING**

6 Iron formation

5 Conglomerate

**ARCHAEO**

4 Greywacke, minor amphibolitic phases; 4d, biotite schist; 4f, greywacke, rhyolite tuffs, and andesite, partly to almost completely amphibolitized, some garnetiferous amphibolite

**KEEWATIN**

3 Agglomerate and some tuff; 3b, (some as 3) may include porphyritic andesite and intermediate lava; 3c, (some as 3) partly amphibolitized

2 2b, porphyritic andesite breccia; 2f, intermediate lavas and breccias partly amphibolitized and/or recrystallized

1a, 1a, line to coarse amphibolite, minor diorite, includes some partly recrystallized andesite and other volcanic rocks, 1f, andesite and other volcanic rocks partly amphibolitized

**MINERAL OCCURRENCES**

Pyrite zone

Gold (flat quartz vein in feldspar porphyry) Au

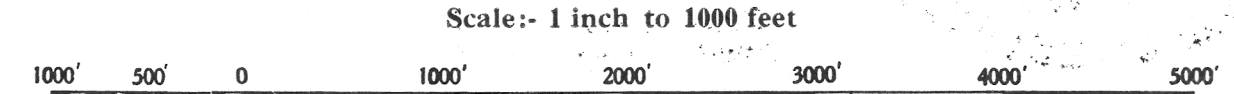

Geology by G. W. H. Norman and H. C. Norman, 1946.

NOTE: The rocks in Vauquelin, Pershing, and Haig townships have been subdivided into 16 map-units, which will not all occur on any one township. Only some of these map-units are equivalent to those of adjoining townships to the west, others are either similar or are quite different.
