

- LEGEND
- MIDDLE ORDOVICIAN?
- 6 Meta-dabase, meta-gabbro
- TETAGOUCHE GROUP
- 5 Quartz-sericite schist, meta-phyllite, sericite-chlorite schist, magnetite, minor quartz-feldspar augen schist
- 4 Greenstone; meta-andesite, and meta-basalt
- 3a Iron-formation: 3a, magnetite-hematite-chert, minor chlorite-magnetite schist, and chlorite schist; 3b, chlorite schist, chlorite-magnetite schist, minor chlorite-carbonate schist, and magnetite-hematite-chert
- 2 Augen schist: quartz-feldspar augen schist, quartz augen schist, minor meta-phyllite, quartz-chlorite-sericite schist, and quartz-sericite schist
- 1 Metasedimentary rocks: subgreywacke, phyllite, minor graphitic schist
- Massive sulphides: pyrite, pyrrhotite, sphalerite, galena and chalcopyrite
- Disseminated sulphides: mainly pyrite and pyrrhotite, minor sphalerite and galena
- Rock outcrop
- Float
- Geological boundary (approximate)
- Bedding and banding in iron formation
- Schistosity (inclined, vertical)
- Fault (defined, approximate, assumed)
- Joint (inclined, vertical)
- Anticline (trace of axial plane)
- Syncline (trace of axial plane)
- Glacial striae
- Drag fold (plunge indicated)
- Dump
- Open cut
- Geology by R. W. Boyle and J. L. Davies, 1958-1961 and from Geological Files, Brunswick Mining and Smelting Corp., Ltd.
- Road
- Building
- Power transmission line
- Stream
- Outline of cleared area
- Contours (interval 25 feet)

Cartography by the Geological Survey of Canada, 1963

Base-map cartography by the Geological Survey of Canada from map compiled by the Brunswick Mining and Smelting Corp., Ltd.

MAP 39-1963
TO ACCOMPANY PAPER 63-24
GEOLOGY

AUSTIN BROOK AND BRUNSWICK NO. 6 SULPHIDE DEPOSITS
