

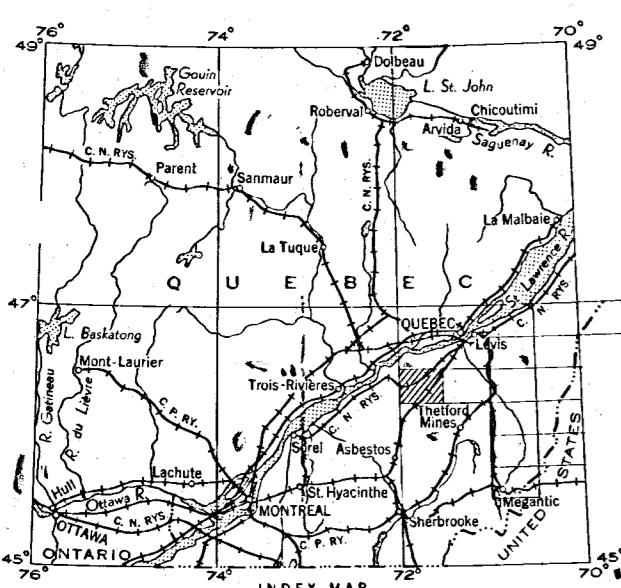

MAP 158 G

## LYSTER

LOTBINIERE, MEGANTIC, NICOLET  
AND ARTHABASKA COUNTIES

QUEBEC

Scale: One Inch to One Mile =  $\frac{1}{63,360}$   
Miles

- Isomagnetic lines (total field)
- 500 gammas.....
- 100 gammas.....
- 20 gammas.....
- 10 gammas.....
- Magnetic depression contour.....
- Flight line.....

Flight altitude: 500 feet above ground level

Magnetic Survey, November 1951 and April 1952,  
by Geophysics Section, Geological Survey of Canada,  
Department of Mines and Technical Surveys.

No correction has been made for regional variation.

Air photographs covering this map-area may be obtained  
through the National Air Photographic Library, Topographical  
Survey, Ottawa, Ontario.

The magnetic data on this map were compiled from information recorded  
along the flight lines shown. The anomalies expressed by the magnetic contours  
are dependent on the variable magnetic intensities of the underlying rocks, and  
may be due to conditions near or at unknown depths below the surface. High  
magnetic anomalies normally indicate the presence of basic rocks, such as diabase,  
gabbro or serpentine, which have a relatively high iron content; but in special  
instances may be due, or partly due, to concentrations of magnetic minerals.  
By means of the magnetic anomalies, various rock bodies or structural features,  
such as faults or folds, may be traced by the geologist into, or across, areas  
of few or no outcrops. In many instances, however, no interpretation of particular  
anomalies may be possible without further geological information.
