

MAP 803G

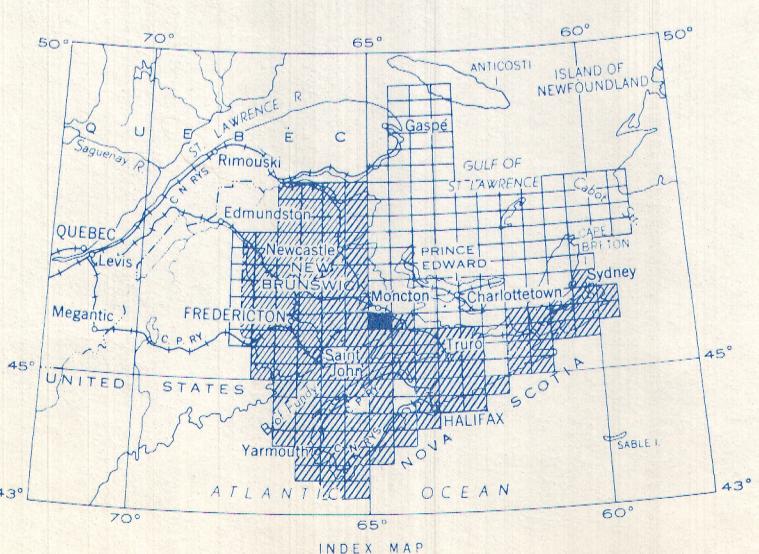

HILLSBOROUGH

ALBERT AND WESTMORLAND COUNTIES

NEW BRUNSWICK

Scale: One Inch to One Mile = $\frac{1}{63,360}$
Miles

Flight altitude: 1000 feet above ground level

Air photographs covering this map - area may be obtained
through the National Air Photographic Library, Topographical
Survey, Ottawa, Ontario.

ISOMAGNETIC LINES (total field)

100 gammas
20 gammas
10 gammas
Magnetic depression
Flight line

Magnetic Survey, May, 1958, by Geophysics Division,
Geological Survey of Canada, Department of Mines and
Technical Surveys.

No correction has been made for regional variation;
this increases at the rate of 4.3 gammas per mile from
east to west and 5.1 gammas per mile from south to
north.

The magnetic data on this map were compiled from information recorded
along the flight lines shown. The anomalies expressed by the magnetic
contours are dependent on the variable magnetic intensities of the under-
lying rocks, and may be due to conditions near, or at unknown depths
below, the surface. High magnetic anomalies normally indicate the presence
of basic rocks, such as diabase, gabbro, or serpentine, which have a rela-
tively high iron content; but in special instances may be due, or partly due,
to concentrations of magnetic ore minerals. By means of the magnetic
anomalies, various rock bodies or structural features, such as faults or
folds, may be traced into, or across, areas of few or no outcrops. In
many instances, however, no interpretation of particular anomalies may
be possible.
