

MAP 4319 G

# BRITANNIA CREEK

## YUKON TERRITORY

Scale: One Inch to One Mile =  $\frac{1}{63,360}$  Miles

COPIES OF THIS MAP MAY BE OBTAINED FROM THE DIRECTOR, GEOLOGICAL SURVEY OF CANADA, OTTAWA

Magnetic survey, March 1966, April 1967 by Aero Photo Inc.  
No correction has been made for regional variation

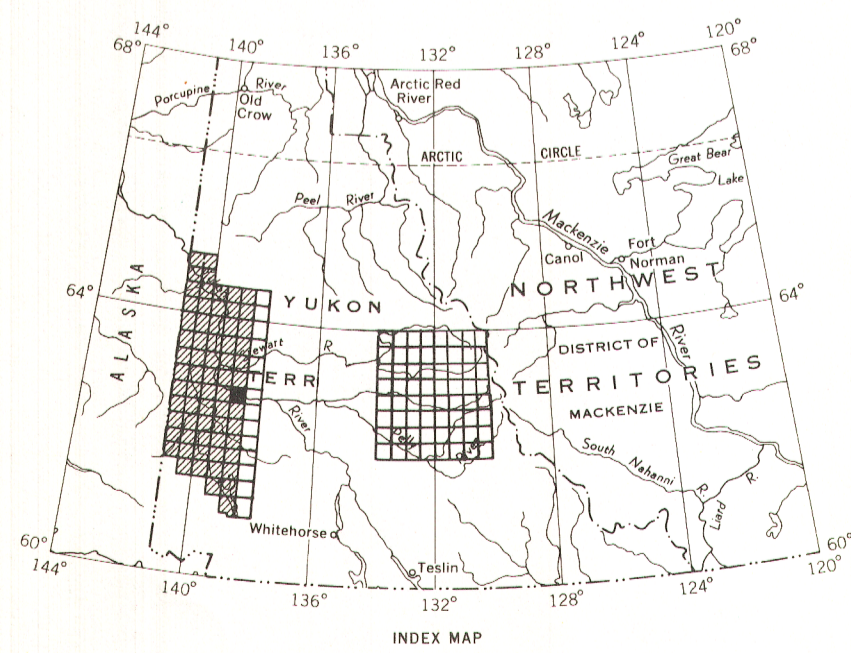

The planimetry for this map was obtained from topographical map sheets published by the Department of Energy, Mines and Resources

The magnetic data on this map were compiled from infom recorded along the flight lines shown. The anomalies expressed t magnetic contours are dependent on the variable magnetic intensit the underlying rocks, and may be due to conditions near, or at unk depths below the surface. High magnetic anomalies normally inc the presence of basic rocks, such as diabase, gabbro, or serpentine, have a relatively high iron content, but in special instances may be or partly due to concentrations of magnetic ore minerals. By mer the magnetic anomalies, various rock bodies or structural features, as faults or folds, may be traced into, or across, areas of few or n craps. In many instances, however, no interpretation of particul anomalies may be possible without further geological information.

GEOPHYSICS PAPER 4319

BRITANNIA CREEK  
YUKON TERRITORY

SHEET 115 <sup>J</sup>/<sub>15</sub>

INDEX MAP

ISOMAGNETIC LINES (absolute total field)

- 500 gammas
- 100 gammas
- 20 gammas
- 10 gammas
- Magnetic depression
- Flight lines
- Flight altitude: nominally 1000 feet above ground level where terrain permitted
