DEPARTMENT PROVINCE OF ENERGY, MINES AND RESOURCES MANITOBA SHEET 620 DEPARTMENT OF MINES AND NATURAL RESOURCES GEOLOGICAL SURVEY OF CANADA AEROMAGNETIC SERIES 40' 98°30′ 35′ Joins Map 4198G, "Steep Rock" 55' TP26 R8 TP26 RIT MANITOBA 10' TP25 R) L 05' TP24 R9 L.A'KE TP23 RIO 60,620 98°30′ 40' 50' Joins Map 4196G, "Alonsa" 55′ 99°00′ PUBLISHED 1968 MAP 4197G The magnetic data on this map were compiled from information recorded along the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of EBB and FLOW ISOMAGNETIC LINES (absolute total field) the underlying rocks, and may be due to conditions near, or at unknown Airborne Magnetic Survey, March 1967 to October depths below the surface. High magnetic anomalies normally indicate the 1968 by Spartan Air Services Ltd. 500 gammas..... presence of basic rocks, such as diabase, gabbro, or serpentinite, which MANITOBA 100 gammas..... have a relatively high iron content, but in special instances may be due, No correction has been made for regional variation. 20 gammas..... or partly due, to concentrations of magnetic minerals. By means of the magnetic anomalies, various rock bodies or structural features, such Scale: One Inch to One Mile = $\frac{1}{63,360}$

> The planimetry for this map was obtained from topographical map sheets published by the Department of Energy, Mines and Resources, Ottawa.

Flight lines.....

Flight altitude 1000 feet above ground level

Where the survey aircraft traversed large areas of water and swamp, Doppler navigation was utilized to direct the course of the aircraft and the Doppler output was recorded on an incremental X, Y recorder for compilation purposes. compilation purposes.

as faults or folds, may be traced into, or across, areas of few or no outcrops. In many instances, however, no interpretation of particular anomalies may be possible without further geological information.
