SASKATCHEWAN

Scale 1:50 000 - Échelle 1/50 000 © Crown copyrights reserved © Droits de la Couronne réservés Airborne magnetic survey, Aug 1968 to Oct 1969, by Aero Photo Inc.

No correction has been made for regional variation. The planimetry for this map was obtained from

Energy, Mines and Resources

the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of the underlying rocks, and may be due to conditions near, or at unknown depths below the surface. High magnetic anomalies normally indicate the presence of basic rocks, such as diabase, gabbro, or serpentinite, which have a relatively high iron content; but in special instances may be due, or partly due, to concentrations of magnetic minerals. By means of the magnetic anomalies, various rock bodies or structural features, such as faults or folds, may be traced into, or across, areas of few or no outcrops. In many instances, advance information supplied by the Department of however, no interpretation of particular anomalies may be possible without further

geological information. GEOPHYSICS PAPER 4585 PELICAN NARROWS SASKATCHEWAN SHEET 63 M
