

ISOMAGNETIC LINES (absolute total field)

- 250 gammas .....
- 50 gammas .....
- 10 gammas .....
- 2 gammas .....
- Magnetic depression .....
- Flight lines .....
- Flight altitude: 2700 m above sea level
- (1 gamma = 1 nanotesla in SI units)

MAP 9178G  
**CAMBRIDGE CREEK**

BRITISH COLUMBIA

SCALE 1:50,000

PUBLICATION 1978  
This map is based on digitally-recorded high-sensitivity aeromagnetic data obtained with a Sander NPM-5 proton precession magnetometer which measured the total magnetic field to a resolution of .05 gamma. The average flight line spacing was 1.6 km and control lines were flown at an average spacing of 9.6 km. The data was edited, compiled, levelled and gamma values for contouring interpolated on a square grid (2.54 mm grid spacing at the published map scale) by automatic computer processes. Control line magnetic data was corrected for changes in the earth's magnetic field with time using various ground stations. Contouring was done on a base map supplied by the British Columbia Ministry of Mines and Petroleum Resources and the Department of Energy, Mines and Resources. Copies of this map may be obtained from the Mineral Resources Branch, British Columbia Ministry of Mines and Petroleum Resources, Victoria, or from the Geological Survey of Canada, Ottawa. The data represented by these maps is available in digital form from the Geological Survey of Canada at the cost of retrieval and copying.
