This map was compiled from digitally-recorded aeromagnetic survey data obtained by the Geological Survey of Canada, using a 0.3219 cm square grid total with a resolution of 1 gamma. The trace of the survey aircraft was recovered from 35 mm track film onto aerial photographs, transferred to a topographic map, reproduced and contoured.

After editing the survey data, the coordinates of the intersections and the differences between the values magnetic traverses and the lines of control were utilized in the procedure manual of niveling.

The total field values were generated on a 0.3219 cm square grid at the scale of the map. The aeromagnetic values were printed out for the total field map scale.

The data used in compiling this map are available in digital form from the Quebec Department of Natural Resources, Energy, Mines and Resources, for the cost of retrieval and copying. The analog records are available from the Quebec Department of Natural Resources only.

Air aeromagnétique effectué par Photour Inc. et Geotekrex Limited entre juin 1973 et septembre 1974.

Aucune correction n'a été apportée pour compenser la variation régionale.
