20 gammes	
10 gammes	
Dépression magnétique	
Magnetic depression	
Lignes de vol	
Flight lines	
Altitude du vol: 300 mètres au-dessus du niveau du sol	121.00
Flight altitude: 300 metres above ground level	

ON PEUT OBTENIR DES EXEMPLAIRES DE CETTE CARTE
INTITULÉE "CARTE - MAP 8625 G" CHEZ LE MINISTÈRE
DES RICHESSES NATURELLES, À QUÉBEC, OU
À LA COMMISSION GÉOLOGIQUE DU CANADA, À OTTAWA,
COMME AU BUREAU DE LA PUBLICATION, DE LA
PUBLICATIONS DIVISION OF THE QUEBEC DEPARTMENT
OF NATURAL RESOURCES, QUÉBEC CITY, OU FROM THE
GEOLOGICAL SURVEY OF CANADA, OTTAWA.

La présente carte est fondée sur l'enregistrement numérique des données
recueillies par un survol aérien effectué par le ministère des Ressources naturelles
total avec une précision de 1 gamma. Le tracé des lignes de vol a été établi sur
photographies aériennes à partir des informations des films de 35 mm, reporté
sur une grille de 0,3219 cm². Les lignes de vol sont tracées de manière transparente.
Après l'édition des données, les coordonnées des intersections de toutes les
traverses et de toutes les lignes de contrôles ont été utilisées dans la procédure manuelle de l'élevage.
Les lignes de vol ont été interpolées aux noeuds d'une grille de maille de 0,3219 cm² à
l'échelle de la carte. Les cartes aéromagnétiques ont été produites sur le tracé
magnétique obtenu par interpolation.

On peut se procurer les données sous forme digitale au ministère des
Ressources naturelles du Québec, et au ministère fédéral de l'Énergie, Mines et
Ressources, Ottawa, pour un coût de 10 \$ le kilomètre carré. Ces données
sont disponibles seulement au ministère des Ressources naturelles du Québec.
Le survol aériomagnétique effectué par Photofit Inc. et Geoterrex Limitee entre

juin 1973 et septembre 1975.
Aucune correction n'a été apportée pour compenser la variation régionale.
Carte de base provenant de cartes publiées par la Direction des Levés de

This map was compiled from digitally-recorded aeromagnetic survey data
obtained by the Ministry of Natural Resources, Quebec, measured with a resolution of 1 gamma.
The flight path of the survey aircraft was recovered from 35 mm track film onto aerial photographs transferred to a topographical map.
After editing the survey data, the coordinates of the intersections of traverses and control lines and differences in their magnetic values were printed out for use in the manual plotting of the survey data.

The total field values were generated on a 0.3219 cm square grid at the
published map scale using Geoterrex Limited computer programs; the final aeromagnetic maps were contoured using the computer and digital plotting facilities
of Photofit Inc.

The data used in compiling this map are available in digital form from the
Quebec Department of Natural Resources, for a cost of retrieval and copying. The analog records are
available from the Quebec Department of Natural Resources.
