CARTE - MAP

8629 G

ÎLE HENDRY  
QUÉBEC

This map was compiled from digitally-recorded aeromagnetic survey data obtained by a proton-precession magnetometer which measured the total field with a resolution of 1 gamma. The trace of the lines of vol to a 1:60,000 scale were recovered from 35 mm track film onto aerial photographs, transferred to a topographical map, reproduced and contoured.

After editing the survey data, the coordinates of the intersections of traverses and control lines and differences in their magnetic values were printed out for use in the manual leveling.

The total field values were generated on a 0.3219 cm square grid at the published map scale using Geoterrex Limited computer programs; the final aeromagnetic values were contoured using a computer program developed by Phototrac Inc.

The data used to compile this map are available in digital form from the Quebec Department of Natural Resources and the Canadian Department of Energy, Mines and Resources, for the cost of retrieval and copying. The analog records are available from the Quebec Department of Natural Resources only.

Levee aéromagnétique effectué par Phototrac Inc. et Geoterrex Limited entre juin 1973 et septembre 1975.

Aucune correction n'a été apportée pour compenser la variation régionale.

Carte de base provenant de cartes publiées par la Direction des Levées et de la Cartographie, ministère de l'Énergie, Mines et Ressources Ottawa.

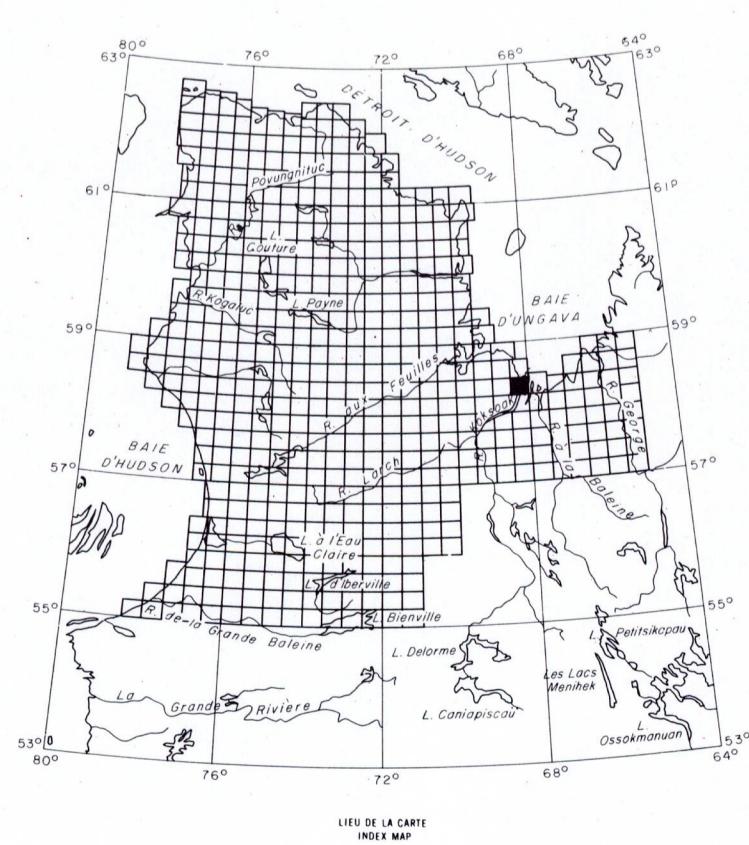

Base map from maps published by the Surveys and Mapping Branch, Department of Energy, Mines and Resources, Ottawa.
