This map was compiled from digitally-recorded aeromagnetic survey data obtained by a proton precession magnetometer which measured the total field with a resolution of 1 gamma. The flight path of the survey aircraft was recovered from 35 mm track film onto aerial photographs, transferred to a topographic map, reproduced on stable material, and digitized.

Après l'édition des données, les coordonnées des intersections et les différences entre les valeurs magnétiques des traversées et des lignes de contrôle ont été utilisées dans la procédure manuelle de nivellement.

After editing the survey data, the coordinates of the intersections of traverses and control lines and differences in their magnetic values were printed out for use in the manual leveling analysis.

The total field values were generated on a 0.3219 cm square grid at the published map scale using Geotrex Limited computer programs. The analog records are available from the Quebec Department of Natural Resources only.

Autonne magnetic survey carried out by Photocor Inc. and Geotrex Limited between June, 1973 and September, 1975.

No correction has been made for regional variation.
