MAP 9123G

FISHTRAP LAKE

DISTRICT OF MACKENZIE
NORTHWEST TERRITORIES

Air photographs covering this map area may be obtained through the National Air Photographic Library, Topographical Survey, Ottawa, Ontario.

COPIES OF THIS MAP MAY BE OBTAINED FROM THE DIRECTOR-GENERAL,
GEOLOGICAL SURVEY OF CANADA, OTTAWA.

Airborne magnetic survey, May 1976 to August 1977,
by Geotrex Ltd., and Northway Survey Corporation Ltd.

No correction has been made for regional variation.

The topography for this map was reproduced from
1:50,000 topographical map sheets, published by the
Department of Energy, Mines and Resources, Ottawa.

Where the survey aircraft traversed large areas of
water and ice, Doppler navigation was utilized to
direct the course of the aircraft and the Doppler output
was recorded on an incremental X, Y recorder for
compilation purposes.

The magnetic data on this map were compiled from information
recorded along the flight lines shown. The anomalies expressed by the
magnetic contours are dependent on the variable magnetic intensities of the
underlying rocks, and may be due to conditions near, or at unknown
depths below the surface. High magnetic anomalies normally indicate the
presence of basic rocks, such as diabase, gabbro, or serpentinite, which
have a relatively high iron content; but in special instances may be due,
or partly due, to concentrations of magnetic minerals. By means of the
magnetic anomalies, various rock bodies or structural features, such as
faults or folds, may be traced into, or across, areas of few or no out
crops. In many instances, however, no interpretation of particular ano
malies may be possible without further geological information.
