DEPARTMENT OF ENERGY, MINES AND RESOURCES

AEROMAGNETIC SERIES

SHEET 12 H  
1

PUBLISHED 1969

ISOMAGNETIC LINES (absolute total field)

- 500 gammas .....
- 100 gammas .....
- 20 gammas .....
- 10 gammas .....
- Magnetic depression .....
- Flight lines .....
- Flight altitude 1000 feet above ground level

MAP 4470G

GULL POND

NEWFOUNDLAND

Scale: One Inch to One Mile =  $\frac{1}{63,360}$

MILE MILES

COPIES OF THIS MAP MAY BE OBTAINED FROM THE  
DIRECTOR, GEOLOGICAL SURVEY OF CANADA, OTTAWA.

Airborne magnetic survey, February 1966 to August  
1967 by Spartan Air Services Limited.

No correction has been made for regional variation.

The topography for this map was reproduced from  
1:50,000 topographical map sheets, published by the  
Department of Energy, Mines and Resources, Ottawa.

The magnetic data on this map were compiled from information  
recorded along the flight lines shown. The anomalies expressed by the  
magnetic contours are dependent on the variable magnetic intensities of  
the underlying rocks, and may be due to conditions near, or at unknown  
depths below the surface. High magnetic anomalies normally indicate the  
presence of basic rocks, such as diabase, gabbro, or serpentinite, which  
have a relatively high iron content, but in special instances may be due,  
or partly due, to concentrations of magnetic minerals. By means of  
the magnetic anomalies, various rock bodies or structural features, such  
as faults or folds, may be traced into, or across, areas of few or no out-  
crops. In many instances, however, no interpretation of particular anomalies  
may be possible without further geological information.
