96	RESEARCHER INDEX/INDEX DES CHERCHEURS

INTRODUCTION

The present publication recording research in progress in Canada from May 1987 to April 1988 is the result of a survey conducted between January, 1988 and March, 1988.

The research projects listed in this compilation are being undertaken mainly within federal and provincial departments, and universities. A relatively complete overview of scientific research activities within Canada in the geological and allied sciences is provided for the survey period.

Using the data supplied for this compilation by the respondents, some indication as to the lines of research receiving the greatest and least attention can be formulated. At least 380 research projects have not been previously reported. The greatest increase during the 1987-88 period was in the fields of Mineral/Energy Geoscience (51), Structural Geology (37) and Geophysics (36). Research projects undertaken as graduate thesis in the universities are so specified wherever possible.

Additional details on research in the earth and related sciences underway in Canada during 1987 can be obtained through the annual reports prepared by individual university departments, research councils, and museums. Comprehensive reports on geophysical research and development, including volcanology and oceanography related research, are contained within the Canadian Geophysical Bulletin published by the Department of Energy, Mines and Resources. Summaries of progress and short research reports related to hydrology/water-related environmental research and glaciology are provided annually by the Water Resources Branch of the Department of Environment Canada and the Associate Committee on Hydrology, National Research Council. Quaternary research in Québec is reviewed annually in the "Bulletin d'information de l'Association québécoise pour l'étude de Quaternaire".

Again this year a listing is included of the 1987 awards provided for geological research within the Research Agreements program of the Department of Energy, Mines and Resources Canada. The Natural Sciences and Engineering Research Council Canada also provided a computer print-out of the operating grants actually awarded in 1987. The 1987 Ontario Research Grants, British Columbia Geological Survey Geoscience 1987-88 Research Grants and Polar Continental Shelf Project field support to non-governmental activities are also listed.

Use of the compilation

The projects are grouped under main headings that cover the majority of disciplines within the geological and allied sciences. These groupings are unchanged from last years compilation (Geological Survey of Canada, Paper 87-5, 1987).

A complete list of organizations contributing to the present survey is included. Acknowledgment is made in particular to those who assembled and forwarded the data on research projects underway in the organizations under their direction. As a convenience, an alphabetically arranged index lists each investigator and the reference number(s) of the project(s).

INTRODUCTION

La présente publication, qui fait état de la recherche réalisée au Canada de mai 1987 à avril 1988, est le fruit d'une enquête effectuée entre Janvier 1988 et mars 1988.

Les projets de recherche énumérés sont exécutés surtout par des ministères fédéraux et provinciaux, et par des universités. Un aperçu assez complet de l'activité de recherche scientifique au Canada pour la période visée dans le domaine de la géologie et des sciences connexes est cependant fourni.

À partir des renseignements donnés par les participants à l'enquête, il est possible de voir quels genres de recherche retiennent le plus et le moins l'attention. Au moins 380 projets nous ont été signalés pour la première fois. Les domaines où la recherche s'est le plus accrue durant l'année 1987-1988 sont les sciences de la Terre-Énergie/Minéraux (51), la Géologie Structurale (37) et la Géophysique (36). Les projets de recherche de 2^e cycle, dans les universités, sont également précisés, dans la mesure du possible.

On peut se procurer de plus amples détails sur la recherche réalisée en 1987 au Canada dans le domaine des sciences de la Terre et des sciences connexes en consultant les rapports annuels mis au point par les différents départements universités, conseils de recherche et musées. Le volume du Canadian Geophysical Bulletin, publié par le ministère de l'Énergie, des Mines et des Ressources, comprend des rapports complets sur les travaux de recherche et les dernières réalisations en géophysique, y compris la recherche connexe en volcanologie et en océanographie. Des résumés des progrès réalisés et de brefs rapports ayant trait à la glaciologie et à la recherche environnementale liée à l'hydrologie sont publiés annuellement par la Direction des ressources en eau d'Environnement Canada et par le Comité associé de l'hydrologie, du Conseil national de recherches du Canada. La recherche sur le Quaternaire au Québec est signalée annuellement dans le "Bulletin d'information de l'Association québécoise pour l'étude de Quaternaire".

Nous incluons à nouveau cette année une liste des prix décernés en 1987 pour la recherche géologique dans le cadre du programme d'accords de recherches du ministère de l'Énergie, des Mines et des Ressources du Canada. Le Conseil de recherches en sciences naturelles et en génie du Canada a également fourni un imprimé d'ordinateur détaillant les subventions aux travaux réellement accordées en 1987. On a signalé également dans ce rapport les subventions de recherche de la Commission Géologique de l'Ontario (Ontario Research Grants), de la Commission géologique de la Colombie-Britannique, et l'aide de l'Étude du plateau continental polaire en faveur d'activités non gouvernementales pour 1987.

Présentation

Les projets sont groupés sous des titres généraux s'appliquant à la majorité des disciplines que comprennent la géologie et les sciences connexes. Ces catégories sont les mêmes que l'année dernière (Étude 87-5, Commission géologique du Canada, 1987).

Une liste complète des organismes qui ont contribué à l'enquête a été dressée. Nous tenons à remercier particulièrement les personnes qui ont recueilli et envoyé les données concernant les projets de recherche en cours dans les organismes dont elles sont responsables. Pour vous faciliter la consultation, un répertoire alphabétique donne les noms de tous les enquêteurs et le(s) numéro(s) de référence de son(s) projet(s).

13

MIHALYNUK, M., ROUSE, G.E.,
JONATHAN, N., CURRIE, L., British
Columbia Ministry Energy, Mines, Petrol.
Res.:

Tagish (Atlin) project: Promotion of British
Columbia mineral potential, 1987-.

See:

Preliminary geology of the Tutshi Lake area,
northwestern British Columbia (104M/15);
British Columbia Ministry Energy, Mines,
Petrol. Res., Paper 1988-1, p. 217-231, 1988.

1:50 000 mapping and stream sediment
sampling program in 1987 furthered our
knowledge of the stratigraphy and structural
and metamorphic styles in 104M/15. Of many
conclusions two are outstanding: (1) rock of
the Whitehorse Trough (wL→) appear to rest
unconformably atop metamorphic rocks of the
Nisling Terrane and(?) Atline/Cache Ck.
terrane(?). (2) many lithologies within
104M/15 have anomalous background Au-
particularly near the Llewellyn fault zone. In
1988 work is planned to continue SE along the
belt of rocks adjacent the Llewellyn Fault
zone.

BARR, S.M., MACDONALD, A.S., WHITE, C.E., VAN WAGONER, N.A., THICKE, M., Acadia Univ. (Geology):

The Fourchu Group and associated granitoid rocks, southeastern Cape Breton Island, Nova Scotia, 1985-89; M.Sc. thesis (Thicke).

See:

The Fourchu Group and associated granitoid rocks of southeastern Cape Breton Island, Nova Scotia; Nova Scotia Dept. Mines and Energy, Report 87-5, p. 185-188, 1987.

This project will produce geological maps of the Fourchu Group and associated granitoid rocks (scale 1:25 000). Major goals are to compare stratigraphy, volcanic setting, and tectonic environment among five separate belts of Fourchu Group rocks in SE Cape Breton Island. In addition to mapping, the project includes petrochemistry, structure, physical volcanology, and radiometric dating.

43

BARR, S.M., WHITE, C.E., Acadia Univ. (Geology):

Field relations, petrology, age, and economic potential of metavolcanic, metasedimentary, and granitoid rocks of the Eastern Caledonian Highlands, southern New Brunswick, 1985-90.

See:

Field relations, petrology, and age of the northeastern Point Wolfe River Pluton and associated metavolcanic and metasedimentary rocks, eastern Caledonian Highlands, New Brunswick; Geol. Surv. Can., Paper 88-1B, p. 55-67, 1988.

To map (scale 1:25 000) the metavolcanic, metasedimentary, and plutonic rocks of the

Caledonian Highlands east of Saint John, New Brunswick, and to interpret the stratigraphy, petrochemistry, and age of these rocks.

Geobotany, 1985-89; M.Sc. theses (McDonald, Trepanier).

To find a link between mineral enrichment in the soil, the physical or physiological manifestation of that enrichment in the overlying vegetation and the detection of the changes, by remote sensing imagery that the vegetation exhibits. Two sites in glaciated terrain in Northern Ontario have been studied. An increase in mineralization tends to be reflected in metal concentration in the vegetation. MEIS imagery of the two sites is currently underway to correlate the areas of high metal concentration with abnormal reflectance patterns on the imagery.

Stratigraphy of the Sixteen Mile Creek Lagoon, Niagara Peninsula, and its implications for the water-level history of Lake Ontario; Can. J. Earth Sci., vol. 25, 1988.

The research has discovered that Lake Ontario water levels have fluctuated above and below the isostatically-controlled level as a result of climatically-induced variations in water supply. The oscillations have an amplitude of ± 1m, and a period of 400-600 years and correlate with world-wide climatic episodes.

Paleolimnology of Truelove Lowland, Devon Island, N.W.T., 1988-91; M.Sc. theses (Scheibli, Smith, Somr).

See:
Holocene environmental changes in Truelove Lowland, Devon Island, N.W.T.; The Canadian Arctic Islands, Canada's Missing Dimension, Nat. Mus. Natural Sci., Program and abstracts, p. 22-23, 1987.

As a result of the postglacial coastal emergence of Truelove Lowland a number of marine lagoons were progressively isolated from the sea. Today, these lakes, now primarily freshwater, cover approximately 22% of the Lowland. Sediment cores have been obtained from the three largest lakes using a modified Livingstone corer and sediment samples are being analyzed biologically, physically, chemically and mineralogically. As the lacustrine sediments represent depositional changes that have taken place within the lakes and the lake catchments during the last 10 500 years, it is hoped to use the paleoenvironmental record preserved in the sediments to reconstruct environmental changes during the Holocene.

CHAN, C., BINA, S., Ontario Geol. Surv.:

An accurate and sensitive method for the determination of mercury in geological materials by continuous-flow, cold-vapor, atomic absorption spectrophotometry, 1987-.

An accurate and sensitive method for the determination of Hg in geological materials is being developed. A LDC/Milton Roy mercury monitor is used as detector with its long path absorption cell to provide better sensitivity. The sample is digested at low heat with nitric and hydrochloric acids. The digested sample and stannous chloride solution are continuously pumped through a mixing coil and into a gas-liquid separator. The reduced mercury is separated and swept into the absorption cell and the atomic absorption at 253.7 nm is measured. The detection limit is estimated 5 ppb or lower. The Hg content of more than 40 international geological reference samples is being determined.

A regional geochemical survey in the Goudreau Lake area, Ontario, 1987-89.

See:

A regional geochemical survey in the Goudreau Lake area, District of Algoma; Ontario Geol. Surv., M.P. 137, pl. 420-422, 1987.

A regional geochemical survey in the Goudreau Lake area, situated 40 km northwest of Wawa, Ontario, was completed during the summer season, 1987.

The area is being actively prospected for gold and this survey will supply much needed

orientation data over the 500 km² area which will be combined with other geoscience data bases developed simultaneously. Sampling was carried out by using a unique coring technique which minimizes the inclusion of lake sediments which have been modified during technological time. A total of 358 sample sites were established which increased the sample density tenfold with respect to a previous reconnaissance data base established by the Canada-Ontario URP program in 1979.

FORTESCUE, J.A.C., STAHL, H., Ontario Geol. Surv.:

A regional geochemical survey in the Wart Lake area, Ontario, 1987-90.

See:

A regional geochemical survey in the Wart Lake area, District of Algoma; Ontario Geol. Surv., M.P. 137, p. 423-425, 1987.

A regional geochemical survey in the Wart Lake area, situated 74 km north of Sault Ste. Marie, Ontario, was completed during the late summer, 1987.

This survey is the first phase of a three-year project carried out as part of the Canada-Ontario Mineral Development Agreement (COMDA). Water and lake sediment core samples (392 samples) were collected from an area of 375 km². As in the Goudreau Lake area, sampling was carried out by using a unique coring technique which minimizes the inclusion of lake sediments which have been modified during technological time. This survey will provide a summary of the geochemical behaviour of elements of importance to mineral exploration in the area.

Gold grains in sonic drill core samples (1987) from the Lake Abitibi-Matheson area, District of Cochrane; Ontario Geol. Surv., Map P.3097, 1987.

Reconnaissance till sampling program, Matheson-Lake Abitibi area, District of Cochrane; Ontario Geol. Surv., M.P. 137, p. 415-419, 1987.

The fourth year of a reconnaissance till sampling project, which is being carried out in cooperation with the Engineering and Terrain Geology Section of the Ontario Geological Survey, and forms part of the Black River-Matheson (BRIM) Program, continued through the winter of 1987/88.

The sampling, largely completed by deep rotasonic drilling, is of particular value in the area due to the paucity of outcrop. Both regional Quaternary (glacial) stratigraphy and a till geochemistry data base are being established from the results. Thus far, the presence of two glacial packages under the Matheson till have been indicated from the detailed stratigraphic record preserved in unconsolidated cores recovered by drilling. Clastic sections of the core are subjected to heavy mineral separation so that independent gold grains may be counted and examined for their size and shape to help in determining their provenience.

The identification of archaeological pottery from southwestern Cyprus using instrument neutron activation analysis, 1983-90.

See:

Western Cyprus: The palaeoenvironment; Studies in Mediterranean Archaeology, vol. LXXVII, p. 7-17, 1987.

An investigation of the geographical origins of pottery from southwestern Cyprus and the source of materials used in their manufacture; *ibid.*, p. 215-226, 1987.

Provenance of clay material used in the manufacture of archaeological pottery from Cyprus; *J. Applied Clay Sci.*, vol. 2, no. 3, p. 199-213, 1987.

An initial sample set of 129 pottery samples of different ages and from a number of archaeological sites in southwestern Cyprus has been expanded to a total of 275 samples, including a number of sample sets of specific pottery type, design and known origin. A multivariate statistical analysis of 33 macro, trace and rare earth elements determined by instrument neutron activation analysis for each of the samples is presently underway with a comparison being made between samples of known type and origin and which constitute reference sets and a group of

samples of unknown type and origin. In addition, the pottery samples are being compositionally compared with a set of clay samples which may have served as raw materials in the manufacture of the pottery. The major object of this project is the construction of a series of compositional typologies for the pottery samples and ceramic raw materials in southwestern Cyprus which could be used to identify ancient pottery manufacturing centres and trade patterns.

238

KYSER, T.K., CADRIN, T., JELICOE, B.L., CHIPLEY, D., REES, M., KOTZER, T., WHITTAKER, S.J., WILSON, M., Univ. Saskatchewan (Geological Sciences):

Fluid history and evolution of the Athabasca basin (Proterozoic) and the Elk Point basin (Paleozoic), 1987-95; M.Sc. theses (Cadrin, Jellicoe, Chipley, Rees, Kotzer), Ph.D. theses (Whittaker, Wilson).

The effects of diagenesis and tectonic evolution on the sediments in two basins are traced using stable and radiogenic isotope systematics. Within the Proterozoic Athabasca basin, in which occur hydrothermal Pt and the world's major unconformity-type uranium deposits, fluid events can be correlated throughout the entire basin. Isotopic compositions of sediments in the Paleozoic Elk Point basin reveal a complex fluid history and variable source terranes for this basin.

239

LIGHTFOOT, P.C., Ontario Geol. Surv.:

Geochemistry of continental flood basalts, with special reference to the Nipissing diabase, 1987-88.

See:

Petrologic, chemical, isotopic, and economic-potential studies of the Nipissing Diabase; *Ontario Geol. Surv., Misc. Paper 136*, p. 4-26, 1987.

Geochemical variations within Nipissing intrusions suggest that assimilation of Huronian sediments by a uniform tholeiitic parent magma is partially coupled to the fractional crystallization of the magma, where

the latent heat of crystallization is responsible for melting of sediments in the roof zones of the intrusions. It is suggested that partial melts of the crust pond at the roof of the intrusion, and are only assimilated into the magma after the break-down of a double-diffusion interface between the basic and aplitic magmas.

WESTGATE, J., PREECE, S., Univ. Toronto (Geology):

Geochemistry of distal tephra beds in the Pleistocene Gold Hill Loess, Fairbanks, Alaska, 1988-90; M.Sc. thesis (Preece):

All tephra beds in the Pleistocene Gold Hill loess of central Alaska must relate to large-magnitude eruptions from volcanoes in the Aleutians or Wrangell Mountains. Their petrographic and geochemical characterization will provide criteria for identification and hence correlation across Alaska and the Yukon Territory.

256

ANDREW, A., ARMSTRONG, R.L., Univ. British Columbia (Geological Sciences): Vancouver Island - LITHOPROBE Pb-Sr-Nd isotopes, petrochemistry, 1977-.

Isotopic and chemical characterization of all the different magmatic suites of Vancouver Island. Pb and Sr largely completed. Nd in progress under a LITHOPROBE grant.

257

ANDREW, A., ARMSTRONG, R.L., GODWIN, C., Univ. British Columbia (Geological Sciences):

Nd-Sm and Pb-Pb character of major components of Vancouver Island, British Columbia, 1987-89.

Further characterization of major rock suites on Vancouver Island within LITHOPROBE framework.

258

ARCHIBALD, D.A., FARRAR, E., Queen's Univ. (Geological Sciences):

Tectonothermal history of the southern Kootenay Arc and Purcell Anticlinorium, southeastern British Columbia, 1976-.

$^{40}\text{Ar}/^{39}\text{Ar}$ and fission track studies of mid-Cretaceous plutons (e.g. White Creek and Bugaboo batholiths) are in progress. In addition, the Precambrian thermal history of rocks in the Purcell Anticlinorium is being investigated in an $^{40}\text{Ar}/^{39}\text{Ar}$ study of the Hellroaring Creek area and Moyie (and younger) mafic intrusions.

259

ARCHIBALD, D.A., FARRAR, E., Queen's Univ. (Geological Sciences):

An isotopic study of granitoid rocks associated with W-Skarn, Selwyn Mountains, Yukon and Northwest Territories, 1985-.

Most micas and amphiboles yield K-Ar dates of ~95 Ma, however, a few exceptions have been found. In this preliminary investigation, coexisting K-feldspar and apatite will be used ($^{40}\text{Ar}/^{39}\text{Ar}$ and fission track) to study the low temperature thermal history of these plutons.

260

ARCHIBALD, D.A., FARRAR, E., CARMICHAEL, D.M., JOURNEAY, J.M., Queen's Univ. (Geological Sciences):

An isotopic study of the west flank of Frenchmans Cap dome, southeastern British Columbia, 1983-.

Whereas all K-Ar mica dates fall between 45 and 55 Ma, amphiboles yield conventional dates as great as 120 Ma. $^{40}\text{Ar}/^{39}\text{Ar}$ experiments reveal a component of excess Ar and a complex, pre-Eocene, thermal history.

261

ARCHIBALD, D.A., FARRAR, E., CLARK, A.H., SEAL, R., Queen's Univ. (Geological Sciences), Univ. Michigan (Geological Sciences):

A K-Ar and $^{40}\text{Ar}/^{39}\text{Ar}$ study of the Lake George antimony deposit, southern New Brunswick, 1983-88; M.Sc. thesis (Seal).

K-Ar dates suggest a Late Silurian age for mineralization. $^{40}\text{Ar}/^{39}\text{Ar}$ step-heating experiments are in progress.

262

ARCHIBALD, D.A., FARRAR, E., HANES, J.A., Queen's Univ. (Geological Sciences):

An $^{40}\text{Ar}/^{39}\text{Ar}$ study of the Kapuskasing structural zone, northern Ontario, 1979-.

An isotopic study of the sheared eastern margin of the KSZ is in progress. A regional-scale, isotopic transect of the KSZ and neighbouring regions has been initiated as part of LITHOPROBE.

263

ARCHIBALD, D.A., FARRAR, E., HELMSTAEDT, H., HALL, D., SCHULZE, D., Queen's Univ. (Geological Sciences):

An $^{40}\text{Ar}/^{39}\text{Ar}$ investigation of the age of kimberlites and the thermal history of their xenoliths, southeastern British Columbia, 1985-.

264

ARCHIBALD, D.A., FARRAR, E., IRVING, E., WOODSWORTH, G.J., Queen's Univ. (Geological Sciences), Geol. Surv. Can.:

$^{40}\text{Ar}/^{39}\text{Ar}$ thermal and paleomagnetic studies of the Smith Island Gabbro, British Columbia, 1985-87.

This pluton has been sampled extensively for paleomagnetic studies. $^{40}\text{Ar}/^{39}\text{Ar}$ step-heating experiment on amphibole should yield the age of emplacement and, the time and magnitude of any later thermal disturbance.

265

ARCHIBALD, D.A., FARRAR, E., MOUNTJOY, E., Queen's Univ. (Geological Sciences), McGill Univ. (Geology):

A K-Ar and $^{40}\text{Ar}/^{39}\text{Ar}$ study of metamorphic rocks near the Purcell thrust, southeastern British Columbia, 1983-.

Biotite-muscovite pairs show a marked reversal of the normal discordance of K-Ar dates. $^{40}\text{Ar}/^{39}\text{Ar}$ step-heating experiments will be done in order to assess the tectonothermal history of these samples.

266

ARCHIBALD, D.A., TAYLOR, R., FARRAR, E., Queen's Univ. (Geological Sciences), Carleton Univ. (Geology):

$^{40}\text{Ar}/^{39}\text{Ar}$ study of the Mt. Pleasant area, New Brunswick, 1985-.

The results of step-heating experiments suggest that mineralization occurred in Late Devonian time and that the area experienced a low-temperature re-heating event in Jurassic time.

267

ARMSTRONG, R.L., Univ. British Columbia (Geological Sciences):

Southern Cordilleran Transect geochron, radiogenic isotopes, and tectonics, 1975-.

A field guide and geochron-tectonics syntheses are being prepared for a transect centered about $49^{\circ}30'N$.

268

ARMSTRONG, R.L., VAN DER HEYDEN, P., Univ. British Columbia (Geological Sciences):

Southern Coast Plutonic Complex - ages and isotopic composition, 1975-.

Special projects and theses will continue to focus on the southern portion of the Coast Mountains, especially sites near the LITHOPROBE transect.

269

271

DOIG, R., McGill Univ. (Geological Sciences):

History of the Cape Smith fold belt and adjacent gneissic terrain, Ungava Peninsula, Québec, 1982-87.

See:

Rb-Sr geochronology and metamorphic history of Proterozoic to early Archean rocks north of the Cape Smith fold belt, Québec; Can. J. Earth Sci., vol. 24, p. 813-825, 1987.

The Proterozoic Cape Smith volcanic fold belt is bounded to the north by Archean gneisses, reworked during the deformation of the Cape Smith belt. An exotic terrain north of the Archean gneisses at Sugluk yields ages of 3.2 to possibly 3.8 Ga. A continental collision in the Proterozoic between this early Archean continent and a 2.9 Ga continental margin containing the Proterozoic volcanic belt may have produced the structural and age relationships we observe now.

272

DOIG, R., McGill Univ. (Geological Sciences):

The metamorphic history of the Grenville Province of western Québec, 1987-89.

The metamorphic history (timing) of the Grenville Province is more frequently assumed than demonstrated. Several hundred samples have been collected along the Montreal-Val d'Or and Lac St. Jean-Chibougamma sections to outline the extent and intensity of Grenvillian and earlier metamorphic events. The methods to be used (some imperfect) are: Rb-Sr mineral and "thin-slab" isochrons, Sm-Nd garnet-whole rock pairs, and U-Pb dates of sphene, monazite, and metamorphic zircons.

273

DUNNING, G.R., SWINDEN, H.S., COLMAN-SADD, S.P., KEAN, B.F., O'BRIEN, S.J., O'BRIEN, B.H., JENNER, G.A., PEDERSEN, R.B., Newfoundland Dept.

Mines and Energy, Memorial Univ. (Earth Sciences), Univ. Bergen:

Geochemistry and geochronology of Appalachian-Caledonian ophiolites U/Pb geochronology in the Appalachian-Caledonian orogen, 1980-

See:

Geology of the Annieopsquotch Complex, southwest Newfoundland; *Can. J. Earth Sci.*, vol. 24, p. 1162-1174, 1987.

Geochronology of the Buchans, Roberts Arm and Victoria Lake Groups, and Mansfield Cove Complex, Newfoundland; *ibid.*, p. 1175-1184, 1987.

U/Pb ages of ophiolites and arc-related plutons of the Norwegian Caledonides: implications for the development of Iapetus; *Contrib. Mineralogy and Petrology*, vol. 98, p. 13-23, 1988.

To establish an accurate and precise geochronologic data base for major units within the Appalachian-Caledonian Orogen. This will permit the age resolution of tectonic events in the development of the mountain belt. Ages of ophiolites as well as arc-related plutonic and volcanic rocks from the Dunnage Zone are enabling us to decipher the magmatic-tectonic development of the Iapetus Ocean.

274

EASTON, R.M., Ontario Geol. Surv.: Isotopic age compilation map of Ontario, 1983.

Initial compilation has been completed and published. Compilation work is continuing, and updated maps and database will be released in 1988-1989.

275

FARRAR, E., ARCHIBALD, D.A., CLARK, A.H., Queen's Univ. (Geological Sciences): The timing of tungsten and tin mineralization, Korea, 1979-88.

An $^{40}\text{Ar}/^{39}\text{Ar}$ and K-Ar study of the Sang Dong and Okbang camps is in progress. K-Ar dates range from 80 to 1850 Ma and $^{40}\text{Ar}/^{39}\text{Ar}$ age spectra suggest complex thermal histories for these areas.

British Columbia Ministry Energy, Mines, Petrol. Res., Paper 1988-1, p.101-104, 1988.
The registration of the double derivative contours on the principal geological features of the Bridge River mining camp appears to be very good. For example, the strong northwest-trending fabric delineated by the zero contour across the Bridge River sheet (92I/16) and the easterly part of the Tyaughton sheet (92J/15) conforms with the direction of the Yalakom and Marshall Creek faults and the front of the Coast intrusions. Also conforming well with this pattern is the young (Tertiary age) Mission Ridge pluton.

BURKE, K.B.S., BIDISCOMBE, P., COMEAU, R., SLAUENWHITE, S., Univ. New Brunswick (Geology):
Historical seismicity of the Passamaquoddy Bay region of New Brunswick, 1986-89.
The historical seismicity record for the Passamaquoddy Bay region during the period 1811 to 1961 has been investigated under two contracts with the Geophysics Division of the Geological Survey of Canada. Newspapers and other historical documents have been

scanned for references to earthquakes and related phenomena in southwestern New Brunswick. Ten previously unlisted seismic events from the Passamaquoddy Bay region were found in this way.

Felt earthquakes occurred in the Passamaquoddy Bay region in every decade of the period covered, 1811 to 1961, except for the 1840s, supporting the idea of this being an area of enhanced seismicity. Three earthquakes with felt area magnitude estimates of 4½ to 5, 5.7 and 5.9 occurred in 1817, 1869 and 1904 respectively, with some evidence of an increase in the numbers of earthquakes in the decades preceding the 1869 and 1904 events. Evidence was also found for changes to present listings of earthquakes, locations, times and magnitudes in the Canadian Earthquake Epicentre File (CEEF).

CAMERON, B., MUTUNGA, E., MacLEAN, B.C., Acadia Univ. (Geology): Seismic stratigraphy of part of the upper Nova Scotian Continental Slope, 1987-88.

See:
Seismic stratigraphy of part of the upper Nova Scotian continental slope: a progress report; Scotia Dept. Mines, Rept. Activities 1987, pt. B, 1988.

Fifteen seismic profiles, totalling 355 kms are being used to study the late Mesozoic and Cenozoic seismic stratigraphy of part of the upper continental slope off central Nova Scotia. This area, covering an area of about 1400 square kms has one exploratory well.

Five major sequences defined by five seismic unconformities reveal a general basinward shift and progradation of the paleoslope environment. At the base of the study interval, a major unconformity separates Upper Jurassic and Lower Cretaceous carbonates from dominantly clastic sediments above. The sequence above terminates at the Cretaceous-Tertiary unconformity. The next overlying sequence exhibits a variety of seismic facies that may relate to Vail's (1987) 'low stand systems tract.' This is unconformably overlain by an 'high stand systems tract', which in turn is followed by another seismic unconformity and a 'low stand systems tract.' The fifth seismic unconformity above is covered by a wedge-shaped sequence of Quaternary clastics.

SEGUIN, M.K., AZZARIA, L., Université Laval (Géologie): Études géophysiques et géochimiques pour fin de prédiction des tremblements de Terre de la région de La Malbaie, Québec, 1985-90.

L'objectif des recherches géophysiques et géochimiques est l'établissement de critères qui soient valables et essentiels à la prédiction des tremblements de Terre de la région de La Malbaie. On fait appel aux variations de la concentration de certains éléments chimiques dans l'eau de trous profonds, à des levés gravimétriques et magnétiques sur des structures failonnées actives et enfin des paramètres mesurés de la sismicité et à la variation de l'accélération terrestre en fonction du temps.

Caractérisation du gisement stratiforme de plomb de Yava, Nouvelle-Ecosse à l'aide de mesures géophysiques en forage, 1986-88.

Cette étude vise à établir le lien entre la minéralisation et différentes mesures géophysiques prélevées dans des trous de forages (diagraphies) dans un gisement stratiforme de plomb. On cherchera à déterminer quelle méthode ou quelle combinaison la méthode offre la meilleure réponse à minéralisation. On étudiera également la possibilité d'utiliser ces informations afin de prédire les teneurs le long des trous de forages.

469

SZOKE, S., Ontario Geol. Surv.:

Aggregate resources inventory program, 1979-.

Information is included in planning strategies and official plans, and forms the basis for discussion of those areas best suited for extraction and for protection for future use. Each report contains a comprehensive assessment of the aggregate resources in the municipality. The best deposits are selected and are delineated on maps showing sand and gravel and bedrock resources. Special projects have also been undertaken in response to particular concerns. The aggregate resources inventory in the Sudbury area is an example of this type of project. Alkali-reactive aggregate from the Sudbury area has caused deterioration in some portland cement structures. An assessment of the area west of Sudbury was undertaken to locate sources of nonreactive aggregate, and a number of close-to-market sources were located.

BERARD, J., DURAND, B., École Polytechnique (Génie minéral):

Le rôle des additifs minéraux sur la réactivité alcalis-granulat dans les bétons, 1985-88; thèse de doctorat (Durand).

Voir:

Use of gel composition as a criterion for diagnosis of Alkalis-aggregate reactivity in concrete; Rilem, Matériaux et construction, vol. 20, p. 39-43, 1987.

Certains ajouts minéraux ont la propriété de réduire l'expansion du béton lorsque celui-ci contient des granulats réactifs. Nous connaissons quels sont les additifs efficaces et nous étudions les produits de réaction chimique responsable de la réduction des expansions.

590

BUTEAU, P., Ministère de l'Énergie et des Ressources du Québec:

Inventaire des tourbières de la Montérégie, Québec, 1987-90.

Les travaux de l'été 1987 constituent la première étape d'un programme de trois ans visant à cartographier les tourbières du Sud du Québec à l'échelle de 1:50 000. En 1987, les tourbières cartographiées sont celles du Sud de Montréal et du bassin versant de la rivière Richelieu. Le territoire couvre les feuillets SNRC 31G/1, 31H/3, 31H/4, 31H/5, 31H/6 et 31H/11.

591

BUTEAU, P., LE GROUPE DRYADE LTÉE: Ministère de l'Énergie et des Ressources du Québec:

Inventaire des tourbières de Matagami, Québec, 1987-88.

Début d'un programme d'inventaire systématique des tourbières du Québec septentrional à partir d'une méthode basée sur la télédétection. Le territoire visité en 87 correspond aux feuillets SNRC 32E/9, 32E/10, 32E/11, 32E/14, 32E/15 et 32E/16.

Ce travail fait état de nombreuses mesures géochimiques, pétrographiques et minéralogiques. Il comporte une interprétation géostatistique de la minéralisation. Les principales conclusions: 1) le gîte est "volcanogène"; minéralisation vraisemblablement eu peu endessous du fond océanique; 2) la minéralisation a précédé le métamorphisme (faciès schistes verts supérieurs); et 3) le principal sulfure minéral est la pyrrhatine; les autres sont chalcopyrite et apatite. La magnétite est localement importante et plusieurs minéraux sont aussi présents: machinawite, argents penttandite, violarite, hedlezite.

To place constraints upon the nature and derivation of the fluids (i.e. magmatic versus meteoric versus connate-metamorphic) from which ore deposition and hydrothermal alteration took place. In so doing, it will help delineate those environments, on a local scale, that are most likely to host economic metal deposits within the larger zones of alteration that are a common nature of the apices of high-level "fertile" granites, such as the Burnthill pluton.

See:
Geology and geochemistry of the Rio deposit, Creighton, Saskatchewan; *Geol. Assoc. Can. - Mineral Assoc. Can.*, Program with abstracts, vol. 12, p. 79, 1987.
Major and trace/ore element data for rocks samples taken on surface and in underground workings were interpreted using correspondence analysis. The results show that gold mineralization (with some tungsten values) was introduced at the same time as pyrite was precipitated in host rocks. A separate hydrothermal event affected the same location and resulted in some potassic alteration and weak Cu mineralization.

METHOT, Y., PERRAULT, G., TRUDEL, P., École Polytechnique (Génie minéral): Géologie de la mine Eldrich, Québec, 1986-87; M.Sc.A. (Methot).
L'or est le seul élément de 30 éléments mesurés (dont As et Sb), enrichi dans le minerai de la mine Eldrich. Il y a dispersion de l'or autour du gîte; le halo de gîte fait 50 m de largeur et titre 1000 à 3000 ppb Au. La dispersion de l'or se fait essentiellement via le réseau de fractures: à 1 m d'une fracture minéralisée, la teneur en Au de la roche encaissante (sans veine) est de 0.8 ppb Au, soit la teneur première.

PETER, J.M., SCOTT, S.D., Univ. Toronto (Geology):

Origin of the Windy Craggy, British Columbia, "Besshi-type" massive sulfide deposit, 1987-90; Ph.D. thesis (Peter).

Detailed surface and underground mapping and sampling of the Windy Craggy massive sulfide deposit of northwestern British Columbia are providing a basis of comparison with the active seafloor vent field of Guaymas Basin, Gulf of California.

751

QUIRT, D., Saskatchewan Research Council (Mineral Res.):

Metallogenesis of Beaverlodge, Saskatchewan uranium mineralization, 1984-.

The relationship between the widespread Na-K metasomatism and uranium mineralization in the Beaverlodge area is being investigated. Deposits in the Uranium City area as well as the Gunnar deposit are under study.

752

QUIRT, D., Saskatchewan Research Council (Mineral Res.):

Characterization of intrusives in the greater Waddy Lake area, Saskatchewan, 1987-89.

Mapping and sampling of selected intrusive bodies in the greater Waddy Lake area is being carried out in order to characterize these rocks with respect to lithochemistry, mineralogy/petrology and structure with the objective of determining relationships of the intrusive rocks to the gold mineralization in the region.

753

QUIRT, D., Saskatchewan Research Council (Mineral Res.):

REE mineralization of the Lyle Lake nepheline syenite, Saskatchewan, 1988-89.

Involves an investigation of the nepheline syenites and magnetite-bearing syenites of the Lyle Lake, Saskatchewan area with respect to REE/fluorite mineralization, and U-Pb and/or Rb-Sr age-dating of the alkaline intrusive.

754

QUIRT, D., MELLINGER, M., Saskatchewan Research Council (Mineral Res.):

Athabasca unconformity-type uranium deposits along the northern rim of the basin, Saskatchewan, 1986-88.

Involves petrological and lithochemical studies on a number of uranium deposits and prospects along the northern rim of the Athabasca basin. The general character of these deposits is somewhat different than the more extensively studied eastern rim deposits with respect to basement lithostructural setting as well as to the form of the uranium mineralization.

755

QUIRT, D., MELLINGER, M., Saskatchewan Research Council (Mineral Res.):

Stratigraphic study of the basal Aphebian sequences of the Wollaston Group, Saskatchewan, 1988-.

To characterize the basal Aphebian metasedimentary rocks of the Wollaston Group through stratigraphy, petrology, lithochemistry. Emphasis will be on the comparison and correlation of those sequences in the immediate vicinity of known uranium

mineralization. Control will be provided by study of a complete section distal from mineralization.

756

QUIRT, D., REES, M., Saskatchewan Research Council (Mineral Res.), Univ. Saskatchewan (Geological Sciences): Goldfields area, Saskatchewan: Gold and the 'Mine Granites', 1984-89; M.Sc. thesis (Rees).
See:
Current research in mineral deposits at the Saskatchewan Research Council; Saskatchewan Geol. Surv., Misc. Rept. 87-4, p. 160-163, 1987.

An assessment of the metasomatic character of the 'mine granites' is being carried out using petrology, XRD mineralogy, litho-geochemistry and fluid inclusion and stable isotope analysis. Gold mineralization is intimately related to this metasomatic process. To date, all of the 'mine granites' (Frontier, Box, Athona) are interpreted as being metasomatic in origin, however, there are substantial differences between them due to differences in host rock.

Crystal structure and cation ordering of synthetic amphiboles and pyroxenes by rietveld method, 1982-89.

See:
Characterization of synthetic pargasitic amphiboles ($\text{NaCa}_2\text{Mg}_4\text{M}^3\text{Si}_6\text{Al}_2\text{O}_{22}(\text{OH},\text{F})_2$; $\text{M}^3 = \text{Al, Cr, Ga, Sc, In}$) by infrared spectroscopy, Rietveld structure refinement, and $27\text{Al } 29\text{Si}$ and 19F magic angle spinning NMR; Amer. Mineral., vol. 72, p. 580-593, 1987.

Characterization of cation ordering in synthetic Scandium-fluor-eckermannite, Indium-fluor-eckermannite, and Scandium-fluor-nyboite by Rietveld structure refinement; *ibid.*, p. 959-964, 1987.

Preliminary tests show that it will be possible to do Rietveld structural refinements on the two pyroxenes of a solvus pair in the fine-grained mixture of experimental synthesis.

794
SMITH, D.G.W., Univ. Alberta (Geology):
The mineralogy and chemistry of the Innisfree brecciated LL5 chondrite, 1979-89.
Innisfree appears to be an example of a regolith breccia. New polished sections of one individual from this fall reveal unusual clasts and evidence of what appears to be extraterrestrial oxidation of Fe, Ni)-phases. Microprobe and possibly other studies of these clasts will be undertaken.

795
SMITH, D.G.W., Univ. Alberta (Geology):
The mineralogy and mineral chemistry of the Skiff meteorite, 1980-88.
The Skiff meteorite was found by W.L. Nemeth on his farm near Skiff, Alberta. It is believed to be an H group chondrite but awaits full investigation and proper classification.

796
SMITH, D.G.W., DE ST. JORRE, L., REED, S.J.B., LONG, J.V.P., Univ. Alberta (Geology), Cambridge Univ.:
Nature and origin of zonal metamictization of Zr-silicates from the Thor Lake rare metals deposits, Northwest Territories, 1985-89; M.Sc. thesis (de St. Jorre).

Zr-silicates occurring in the T-zone of the Thor Lake rare metals deposit show sharply zoned metamictization. The composition of the different zones in the Zr-silicate is being investigated by a combination of ion and electron microprobe techniques, with a view to understanding the mechanism of formation and assessing the possible implications for the use of such material is dating work.

797
SMITH, D.G.W., LAUNSPACH, S., Univ.

Alberta (Geology), California Instit. Technology: The nature and composition of metal particles in the Bruderheim (L6) ordinary chondrite, 1986-88.

Detailed analytical and imaging work on metal particles show that, notwithstanding conventional wisdom, they have not formed in situ during the thermal metamorphism which effected such chondrites. Rather they must have formed in an environment that predated accretion and that individual grains have subsequently been subjected to only minor compositional changes.

798
SMITH, D.G.W., LEBOVITZ, D.P., Univ. Alberta (Geology):
MINIDENT-PC: A microcomputer based version of the MinIdent data base and mineral identification software, 1981-.

MINIDENT is an interactive mineral identification and mineral data base management program, written in FORTRAN 77. Data have been stored for about 4000 mineral groups, species and varieties. These data include composition, optical properties in transmitted and reflected light, symmetry, unit cell dimensions, densities, Vickers and Mohs hardness, d-values and relative intensities of the 5 strongest X-ray powder diffraction lines, JCPDS numbers, any polymorphs, occurrences, localities, year first described and sources of the data. However, not all minerals yet have data stored for all of these fields.

Advantage is now being taken of the developments in micro-computer hardware to design a version that can be truly available in any lab. Rather than being a trimmed down version of the mainframe program and data base, it will offer more facilities and conveniences in the microcomputer form.

799
SMITH, D.G.W., MUIRA, Y., LAUNSPACH, S., University of Alberta (Geology); Yamaguchi Univ. (Geology), Japan:
Compositional variation and origin of metal phases in chondritic meteorites, 1979-.
The patterns of variation of the Fe, Ni and Co contents of metal phases in chondritic meteorites are being investigated by electron microprobe techniques. It is believed that this will shed light on their origin, manner of aggregation and thermal histories.

800
SMITH, D.G.W., NOREM, D., GOLD, C., Univ. Alberta (Geology):
Chemical mineralogy of clays, 1980-.
Compositional data obtained with electron microprobes and by other techniques are being used in conjunction with an extensive compositional data base for clay minerals to determine both the extent of solid solutions between clay mineral species (e.g., the smectites) and the proportions of the different clay mineral species in clays and soils.

801
UENO, T., SCOTT, S.D., Univ. Toronto (Geology), Fukuoka Univ., Japan:

Experimental determination of the solubility of Gallium in Zinc Sulfide, 1987-88.

Sphalerite is a major repository of Gallium in sulfide ores and in some meteorites. There are no systematic data on the solubility of Ga in sphalerite for interpreting the empirical observations.

858

ANDREWS, S.M., CARROLL, R.L., Royal Scottish Museum, Redpath Museum:

Anatomy and phylogenetic position of adelogyrinid amphibians (Paleozoic lepospondyls), 1987-.

Preliminary work shows that adelogyrinids lack limbs, but have a massive hyoid

apparatus. They show no specific affinities with any other groups of Paleozoic amphibians.

859

BRINKMAN, D., EBERTH, D.A., Tyrrell Museum of Palaeontology:

Microvertebrate assemblages from the Judith River Formation of Dinosaur Provincial Park, Alberta, 1985-.

To further our understanding of the diversity and paleoecology of vertebrate in the Judith River Formation by surveying microvertebrate assemblages in Dinosaur Provincial Park.

860

CARROLL, R.L., Redpath Museum:

Agiolosours and the problem of establishing evolutionary rates between major adaptive types, 1984-.

Major transitions may be based on relatively few skeletal changes. More extensive changes may occur within lineages that have previously undergone a major adaptive shift.

861

CARROLL, R.L., Redpath Museum:

Developmental aspects of holospondylous vertebrae in Paleozoic amphibians, 1986-.

See:

Developmental aspects of holospondylous vertebrae in Paleozoic tetrapods; 47th Ann. Meeting Soc. Vertebrate Paleontol., Abstracts, p. 13B, 1987.

Centra of Paleozoic lepospondyls and early amniotes probably developed by direct ossification of perichordal sheath, in contrast with the arch centra of labyrinthodonts.

862

CARROLL, R.L., Redpath Museum:

Large scale patterns and processes of vertebrate evolution, 1987-.

See:

Vertebrate paleontology and evolution; W.H. Freeman and Company, 1987.

Large scale patterns of vertebrate evolution - the origins of major new structures, physiological patterns and ways of life - can be explained by the same evolutionary processes as those that govern evolution at the level of populations and species.

863

CARROLL, R.L., CURRIE, P.J., Redpath Museum, Tyrrell Museum of Paleontology:

Problems of phylogenetic analysis, 1980-.

Convergence is a very common factor in the evolution of vertebrates. It is very important to establish the homology of structures before they can be used to establish sister group relationships. Establishment of putative ancestor-descendant relationships is necessary in order to determine the polarity of character morphoclines.

864

DE BRAGA, M., Redpath Museum:

Functional morphology of aigialosaurs and the origin of aquatic locomotion in mosasaurs, 1987-; M.Sc. thesis.

Preliminary work shows that aigialosaurs

retain most of the skeletal features of their terrestrial varanoid relatives, although the nature of the quadrate and the shape of the tail indicate that they were habitually aquatic. Their cranial anatomy confirms previous assumptions that aigialosaurs are close to the ancestry of mosasaurs.

865

DINELEY, D.L., LOEFFLER, E.J., Univ. Bristol (Geology):

Early vertebrates from the Late Silurian/Early Devonian of Somerset and Prince of Wales Islands, Northwest Territories, Canada, 1964-.

 ZODROW, E.L., Univ. College of Cape Breton
 (Geology):
 Pecopterids of Sydney Coalfield, Nova Scotia,
 1980-.
 To-date many type and figured specimens of
 the cyatheoid group have been examined by
 me and large-scale oversplitting noted. On
 balance it appears that the group only has 4-5
 well-defined, biostratigraphic efficient species
 (*Pecopteris arborescens*, *P. hemitelioides*, *P.*
cyathea, *P. paleacea*, plus some varieties).
 These have the biostratigraphic potential for
 locating boundary planes in the Upper
 Carboniferous of the world.

 Cape Breton (Geology), Nature Conservancy
 Council, England:
Neuropteris ovata frond studies, 1985-.
 See:
 The structure of the Carboniferous
 pteridosperm frond *Neuropteris ovata*
 Hoffmann; Palaeontographica, Abt. B, vol.
 208, p. 105-124, 1988.

Pteridosperm frond structure is an
 important taxonomic element for its natural
 classification, steering away from the form
 genus. This paper reconstructs the frond and
 suggest evolutionary lines from *N. obliqua* -
N. ovata - *Odontopteris*, all of which have
 biostratigraphic utility in the Upper
 Carboniferous.

PETROLOGY/PÉTROLOGIE

EXPERIMENTAL/EXPÉRIMENTAL

919
 CHENG, W., GREENWOOD, H.J., Univ.
 British Columbia (Geological Sciences):
 Equilibrium among diopside, hydrogrossular
 spinel, chlorite and H₂O, 1987-89.
 Equilibria in the CMASH system have been
 reversed at the invariant point involving
 zoisite, diopside, anorthite, grossular, spinel,
 and chlorite. The invariant point is close to 2.8
 kb, 600°C.

 Partitioning of Hf, Lu, Ti and Mn between
 olivine, clinopyroxene and basaltic liquid;
 Contrib. Mineral. Petrol., vol. 96, p. 476-484,
 1987.

Experiments and analytical work have
 been completed on Sc, Ti, V, Y, Zr, Nb, Lu, Hf,
 Ta partitioning between diopside cpx and iron
 free melt. Experiments on a melt with Mg #
 = 0.5 are in progress.

922
 DUNN, T., MARINON, A., Univ. New
 Brunswick (Geology):
 Partitioning of REE between pyroxene and
 silicate melts: Mg # effects, 1987-; M.Sc. thesis
 (Marinon).
 To determine the effect of changing Mg# on
 crystal/melt partitioning of the REE.

923
 ROEDER, P.W., SCOWER, P., REYNOLDS,
 I., Queen's Univ. (Geological Sciences):
 Solubility of chromium in basaltic melts and
 reequilibration of chromite with melt, 1984-;
 M.Sc. thesis (Scower).
 The solubility of chromium has been
 determined for basaltic melts at 1300°C over
 a large oxygen fugacity range (log fO₂ = -0.7 to
 -13). The chromite composition for these
 experiments has also been measured. An
 associated research project involved analyzing
 chromite from the Kilauea Iki Lava Lake to
 determine how chromite reequilibrates with
 basaltic liquid on decreasing temperature.

IGNEOUS/ROCHES IGNÉES

924
 ALEMAYEHU, T., BELL, K., MOORE, J.M.,
 Carleton Univ. (Ottawa-Carleton Geoscience
 Centre):
 Petrology and geochemistry of plutonic rocks,
 Gore-Gambela area, Ethiopia, 1983-88; Ph.D.
 thesis (Alemayehu).
 See:
 Magmatic arc intrusive complexes in the
 Birbir Domain, western Ethiopia; Current
 Res. in African Earth Sci., p. 113-116, 1987.

Geology of the Gore-Gambela Geotraverse,
 western Ethiopia; *ibid.*, p. 109-112, 1987.
 Major, minor and trace element (incl. REE)
 data permit division of the plutonic suite into
 (1) prekinematic intrusive complex (variably
 deformed, mainly gabbro to quartz diorite); (2)
 late to post-kinematic potassic granite; and (3)
 peraluminous leucogranite. Group (1) reflects
 subduction-related magmatism, from oceanic

(low k) to continental margin (medium k).
 Group (2) relates to post-collisional uplift of
 the ore; group (3) to partial fusion of a
 thickened continental margin.

Duck Lake intrusive sheet; Geol. Assoc. Can., Field Guide - Yellowknife Mining District, Mineral Deposits Section, 1987.

Discusses the geology of a layered mafic-ultramafic intrusion and its potential for platinum group element potential.

951

GREENOUGH, J.D., DOSTAL, J., FRYER, B.J., MOSSMAN, D.J., Mount Allison Univ. (Geology):

Physical and chemical processes affecting differentiation of early Mesozoic volcanic rocks of Atlantic Canada, 1984-91.

See:

The petrology of North Mountain basalts from the wildcat oil well Mobile Gulf Chinampas N-37, Bay of Fundy, Canada; Can. J. Earth Sciences, vol. 24, p. 1255-1260, 1987.

North Mountain basalt from Digby, Nova Scotia: models for a fissure eruption from stratigraphy and petrochemistry; *ibid.*, vol. 25, p. 74-83, 1988.

There are various aspects to the project. 1) Rhythmically layered rhyolitic bands have (1-2 cm) been identified in thick flows of the North Mountain basalts. Although it is not certain how these formed as yet it would appear that they formed through silicate liquid immiscibility. 2) The rhyolitic bands have high Rb/Sr ratios and have allowed dating of the basalts by Rb-Sr methods. 3) As part of a project on Pt group element concentrations in basalts, the effects of crustal assimilation, crystal fractionation, and silicate liquid immiscibility on PGE concentrations are being evaluated. 4) Several of the early Mesozoic dykes are over 100 km long. An attempt is being made to evaluate injection directions in these rocks by analyzing petrofabrics in the dykes.

953

JAMES, R.S., Laurentian Univ. (Geology): Petrology of the host rocks to the Cu-Ni-P.G.M. mineralization, Kanichee Intrusion, Temagami, Ontario, 1984-. An unmineralized border zone suite of rocks with a chilled marginal facies encloses the mineralized peridotite of the south-east plunging ore zone. A weighted average composition for the border zone has MgO equal to 15-21 wt%.

954

JAMES, R.S., BRONS, D., Laurentian Univ. (Geology): Stratigraphy and geochemistry of the metavolcanic rocks in the Arsenic Lake region, northeastern portion of the Temagami Greenstone Belt, Ontario, 1985-; M.Sc. thesis (Brons). The volcanic stratigraphy in this region has been subdivided into two units both of which dip steeply to the south. Several subunits of each are recognized. Tholeiitic rocks predominate in the earliest unit while both tholeiites and calc-alkaline rocks are present in the upper unit. Major element chemistry permits distinction of the two volcanic suites in the upper unit using standard chemical variation diagrams.

955

JAMES, R.S., JOHNSTON, M., Laurentian Univ. (Geology): Stratigraphic and geochemistry of metavolcanic rocks in southeastern portion of the Temagami Greenstone Belt, Ontario, 1985-87; M.Sc. thesis (Johnston). Stratigraphic and petrological data indicate that a 3.8 km thick section of this volcanic belt consists of a bimodal suite of mafic tholeiitic flows and pyroclastic rocks, and a calc-alkaline suite of pyroclastics and Qz-Fp-porphry flows, sills and dykes. The felsic rocks have the geochemical characteristics of a trondhjemitic suite whose origin is considered to be due to partial melting of a small portion of a qtz. thol. source.

BROWN, Y., STEA, R.R., Nova Scotia Dept. Mines and Energy: Quaternary map of Nova Scotia, 1987-89. Compilation map of surficial geology of the province of Nova Scotia. Will be published at a scale of 1:50 000 and will incorporate all available information on surficial geology of the province.

1018

CAMERON, B., JONES, J.R., Acadia Univ. (Geology): Modern coastal back-barrier island environments are analogs for carbonaceous shales, not coals, 1987-88. See:

Surface distribution of Foraminifera in a New England salt marsh: Plum Island, Massachusetts; Maritime Sediments and Atlantic Geol., vol. 23, no. 3, p. 131-140, 1987.

Coastal back-barrier salt-marsh environments are evaluated as possible modern analogs for some coal-forming basins. Analysis of the amount of organic matter in

Holocene salt-march peats from 158 core samples at Plum Island, Massachusetts, indicates that the organic matter content is too low to ultimately produce a coal. C-14 dates indicate depositional rates of 1 mm/yr. Both the high and low salt-march peat facies would probably diagenetically alter to a carbonaceous shale. A review of the organic content reported from other nondeltaic back-barrier and coastal salt-marsh environments indicates that they often have too much detrital material to classify as coal precursors. Barrier-island systems, being affected by sea-level changes and subject to landward migrations, also lack long-term stability needed for coal formation. These data suggest that modern back-barrier environments are not good analogs for coal-forming basins.

1019

CAMERON, B., JONES, J.R., Acadia Univ. (Geology): Paleoenvironmental and stratigraphic implications of a newly discovered Holocene freshwater peat deposit along the coast of Plum Island, Massachusetts, 1986-89. Early Holocene freshwater peat and underlying blue clay were temporarily exposed in 1986 in the intertidal zone along the oceanward side of Plum Island, Massachusetts. These deposits are the oldest dated Holocene sediments on Plum Island. They were mapped and sampled for sediment analyses, plant megafossils, pollen, and ¹⁴C dating because of their significance to our understanding of late-glacial to Holocene New England geology, the development of the Plum Island barrier island system, and Recent New England sea-level history. The peat is well-preserved, contains about 90% organic matter, and is dominated by cattails, *Sphagnum*, and sedges which indicate a freshwater-bog paleoenvironment. The surface yielded ¹⁴C dates of 2975 and 3055 years B.P. The pollen

assemblages indicate an age of 7000-9000 years for the base and local paleoclimatic changes from cool-moist to warm-dry conditions. The blue clay resembles mainland, possibly late-glacial, blue clays found from eastern Massachusetts to Maine. It cannot be accurately dated. Lacking marine fossils, we suggest a late Wisconsin to early Holocene age and a lacustrine origin. These peat and clay deposits probably developed in a sheltered lake-bog environment between drumlins to which the southern end of the island is anchored today. The bog must have been terminated by eustatic sea level rise about 3000 years ago.

SOIL SCIENCE/PÉDOLOGIE

Soil samples, ranging in age from 2,300 to
9,700 years BP, were collected from twenty-
four raised beaches in Truelove Lowland,
Devon Island. A suite of multivariate
statistical techniques have been applied to the
soil chemical data to isolate individual
pedogenic factors influencing soil development
in these deposits. Soils have been isolated
which reflect development through time with
minimal influences from variations in
vegetation, relief, parent material and
climate.

Ph.D. thesis (Bleeker).
Based on observations in the Thompson Open
Pit, a structural-metamorphic model has been
proposed for the Thompson Nickel Belt. This
model has been tested throughout the Belt and
successfully combines all presently available
data. Further aims are more detailed P.T.
data for various localities and a detailed 3D
reconstruction of the Thompson Mine
environment.

NEW BRUNSWICK/
NOUVEAU-BRUNSWICK

1313

BURKE, K.B.S., STRINGER, P., Univ. New Brunswick (Geology):

Investigation of neotectonic features in southwestern New Brunswick, 1987-89.

Magnetometer and magnetic gradiometer traverses have been completed over known or projected positions of a southwest trending Lower Jurassic dyke in the northern Passamaquoddy Bay region of southwestern New Brunswick and southeastern Maine. Interpretation of the magnetic data shows that the dyke is offset by northwest trending sinistral faults on Orrs Head and in Mill Cove; however, the dyke is not offset by the major northwest trending Oak Bay Fault. Dextral offset of a few metres has been mapped in a coastal exposure of the dyke on the eastern side of Holts Point.

Known locations of glacial striae along coastal outcrops around northern Passamaquoddy Bay have been checked for post-glacial displacements, but none found. Structures observed in glacial deposits in some quarries in the region are not apparently related to bedrock structure. Exposures mapped so far of northwest trending faults lack overburden in which postglacial displacements could be detected. Therefore, the association of faults with recent seismicity remains to be demonstrated.

Volcanic assemblages of the Elzevir Terrane, Grenville Province, southeastern Ontario, 1984-; M.Sc. thesis (Bartlett).

Major and trace element geochemical data, stratigraphy and criteria of eruptive style and environment have been compiled for the Tudor/Mazinaw Lake, Kashwakamak, Shovel Lake, Turriff and Belmont Lake metavolcanic rocks. These vary from relatively thick (>4km), uniform submarine low-K tholeiitic basalts and andesitic basalts (Tudor, Turriff, Belmont) through bimodal tholeiitic andesite-rhyolite (Mazinaw), to true calc-alkaline basalt-andesite-dacite-rhyolite (Kashwakamak, Shovel Lake, Turriff, Belmont). The low-K tholeiites are the most widespread and the earliest eruptions (ca. 1290Ma); their base has not been discovered. They were succeeded in places by more differentiated tholeiites, by volcanogenic and carbonate sedimentary rocks, and abruptly by thick calc-alkaline accumulations of more central type, that were initially subaqueous and dominated by flows but built pyroclastic/epiclastic edifices that were at least locally emergent. Thick shallow-water, carbonate-dominated sedimentary facies accompanied and succeeded the calc-alkaline rocks; sulphide-rich exhalites and vein deposits at this stage testify to submarine geothermal activity. The calc-alkaline rocks belong -at least in part- to a distinctly younger suite, extruded ca. 1250Ma, in approximate concurrence with the emplacement of tonalite-granodiorite batholiths and a variety of smaller, more heterogeneous intrusive bodies, some of which were emplaced at high level.

Although these diverse volcanic associations cannot be entirely reconciled using existing data, their stratigraphy and

chemistry suggest that: 1) there is no evidence of silic basement to the tholeiites; 2) the main variations in the basalts are consistent with different amounts of partial melting, combined with inhomogeneity of the source; and 3) the calc-alkaline suites cannot have been derived from the basalts, and are the earliest members of the succession bearing the imprint of subjacent silic crust. A plausible, albeit unproven, genetic model is that of a magmatic arc (and back-arc?) complex that began its evolution on oceanic crust and subsequently was accreted to a continental margin. These episodes in the history of the Central Metasedimentary Belt constitute the "Elzevirian Orogeny".

BRITISH COLUMBIA	<u>University of Victoria</u>	Chatterton, B.D.E. (Geology)
<u>University of British Columbia</u>	Tunncliffe, V. (Biology)	Conodont biostratigraphy and paleoecology of the Famennian Palliser Formation and subsurface equivalents, Alberta and British Columbia, \$3,000.00.
Bovis, M.J. (Geography)	Time-lapse camera measurements of sulphide accumulation at hydrothermal vents, \$2,500.00.	Cruden, D.M. (Geology)
Rockslope deformation in the southern Coast Mountains, British Columbia, \$7,800.00.	Van der Flier-Kell, E. (Geography)	Geotechnical characterization of materials in slope movements in the Cordillera, \$8,000.00.
Calvert, S.E. (Oceanography)	Platinum potential of the Tulameen coal deposit, southwestern British Columbia, \$8,000.00.	ALBERTA
Geochemistry of oceanic ferromanganese deposits, \$7,000.00.	<u>University of Alberta</u>	England, J. (Geography)
Clowes, R.M. (Geophysics and Astronomy)	Baadsgaard, H. (Geology)	Mapping of surficial geology and reconstruction of Late Quaternary history, Phillips Inlet/Wootton Peninsula, northwest Ellesmere Island, \$8,000.00.
Endeavour segment of Juan de Fuca Ridge: crustal structure from seismic refraction studies, \$10,000.00.	Geochronology and petrogenesis of the Archean Kamisak Lake Alkaline Intrusion and the surrounding country rock, \$5,500.00.	Lerbekmo, J.F. (Geology)
Ellis, R.M. (Geophysics and Astronomy)	Burwash, R.A. (Geology)	Upper Cretaceous - Paleocene magnetostratigraphic and geochemical correlations, \$4,000.00.
Analysis and interpretation of Kapuskasing Structural Zone refraction data, \$9,000.00.	Western Canada Basin heat generation data base, \$6,000.00.	Nesbitt, B.E. (Geology)
<u>Simon Fraser University</u>		Evaluation of the origin of mesothermal gold-quartz veins of the Canadian Cordillera, \$7,600.00.
Huntley, D.J. (Physics)		
Laser dating of sediments, \$6,000.00.		

76 List of grant awards in the earth sciences for 1987-88/
Liste des subventions attribuées aux sciences de la Terre en 1987-88

Univeristy of Calgary

Cook, F.A. (Geology and Geophysics)
Enhanced interpretation of Lithoprobe southern Canadian Cordillera reflection data, \$10,000.00.

Hills, L.V. (Geology and Geophysics)
Charophyta of Canada, \$4,000.00.

Hutcheon, I. (Geology and Geophysics)
Mass transport in the Fort St. John Group, \$8,000.00.

Simony, P.S. (Geology and Geophysics)
Tectonics and Metamorphism in North Thompson Area, British Columbia, \$12,500.00.

Alberta Research Council

Edwards, D. (Mineral Resources)
Construction aggregate survey and projection study, \$7,000.00.

Hamilton, W.N. (Geological Survey)
Evaluation of mineral requirements for major industries and availability in Alberta and adjacent regions, \$7,000.00.

SASKATCHEWAN

University of Saskatchewan

Gendzwill, D. (Geological Sciences)
Natural and induced seismicity in Saskatchewan, \$15,000.00.

Hajnal, Z. (Geological Sciences)
Processing and analysis of 1986 Great Lakes seismic data, \$8,000.00.

Paulson, K.V. (Physics)
Application of magnetotellurics to mineral and hydrocarbon exploration: I. Canonical decomposition and maximum entropy inversion, \$5,000.00.

ONTARIO

Brock University

Brand, U. (Geological Sciences)
Cathode petrography and geochemistry of the Onodaga Formation, Southern Ontario and western New York, \$3,000.00.

Cheel, R.J. (Geological Sciences)
A study of the sedimentology of the Cypress Hills Formation (Oligocene), southeastern Alberta and southwestern Saskatchewan, \$4,000.00.

Carleton University

Brown, R.L. (Geology)
The Monashee decollement and its structural relationship to the Valhalla Complex of southeastern British Columbia, \$10,500.00.

Csorgo, M. (Mathematics and Statistics)
Weighted empirical and quantile processes and their applications to the study of random sequences, \$5,000.00.

Taylor, R.P. (Geology)
Rubidium-strontium and samarium-neodymium isotope systematics of fluorites from the Mount Pleasant Tungsten-Molybdeum-Tin deposit, New Brunswick, \$4,000.00.

Yole, R.W. (Geology)
Stratigraphy, petrography and environmental analysis of Late Paleogene sediments, Mackenzie Delta - Beaufort Shelf area, N.W.T., \$8,780.00.

Yole, R.W. (Geology)
Stratigraphy, petrography, diagenesis and reservoir properties of Upper Jurassic sandstones, Grand Banks, Offshore Eastern Canada, \$8,280.00.

Lakehead University

Roddy, D. (Electrical Engineering)
Subsurface data analysis, \$6,390.00.

Laurentian University

Rubin, G.A. (Physics)
Weakening and fragmentation of hardrock by high-power sonic or ultrasonic resonance, \$10,000.00.

McMaster University

Clifford, P.M. (Geology)
Structural, chemical and isotopic study of a Proterozoic hydrothermal centre, near Killarney, Ontario, \$5,000.00.

Crocket, J.H. (Geology)
Precious metals in volcanic exhalates from the Juan de Fuca Plate, \$8,100.00.

Heidebrecht, A.C. (Civil Engineering)
Site-specific earthquake ground motion records and related design base shears for Canadian cities, \$7,000.00.

Middleton, G.V. (Geology)
Hydrodynamics and sedimentary processes at small tidal inlets, Prince Edward Island, \$9,500.00.

Schwarcz, H.P. (Geology)
Electron spin resonance dating of mollusc shells from Pleistocene of Arctic Canada, \$6,000.00.

Queen's University

Archibald, D.A. (Geological Sciences)
Argon 40-Argon 39 study of Cretaceous igneous rocks, Taseko Lakes area (920), British Columbia, \$2,000.00.

Schulze, D.J. (Geological Sciences)
An investigation of the petrology and tectonic setting and significance of diatreme breccias and their mantle and basement xenoliths, southeast British Columbia, \$5,900.00.

Smol, J.P. (Biology)
Fossil cladoceran assemblages in lake sediment stratigraphies from the Canadian High Arctic, \$5,000.00.

Royal Ontario Museum

Dunning, G.R. (Mineralogy and Geology)
Uranium-Lead geochronology of metamorphic complexes, Newfoundland Appalachians, \$5,000.00.

Wicks, F.J. (Mineralogy and Geology)
The mineralogy and geochemistry of the serpentinized ultramafic bodies of the Manitoba Nickel Belt, \$8,500.00.

University of Toronto

Bailey, R.C. (Geology and Physics)
Interpretation method for magnetotelluric data contaminated by surface distortion effects, \$7,000.00.

Davis, D.W. (Geology)
Precise U-Pb age constraints on the tectonic evolution of the western Wabigoon Subprovince, Superior Province, Ontario, \$7,000.00.

Dunlop, D.J. (Geophysics)
Chemical magnetization and remagnetization of sedimentary and metamorphic rocks, \$7,000.00.

Naldrett, A.J. (Geology)
Behaviour of PGE during fractional crystallization and mantle melting and their use as an exploration guide, \$10,500.00.

Norris, G. (Geology)
Miocene palynostratigraphy of ODP Leg 105, Site 645 (Baffin Bay) and Paleogene palynostratigraphy of ODP Leg 105, Site 647 (Labrador Sea), \$8,000.00.

Rucklidge, J.C. (Geology)
Feasibility study for the measurement of iodine isotope 129 for the potential dating of hydrocarbon reservoirs, \$4,000.00.

Scott, S.D. (Geology)
Gold in volcanogenic massive sulphide deposits, \$6,500.00.

University of Waterloo

Franklin, J.A. (Earth Sciences)
Digital photoanalysis of rock jointing, \$15,000.00.

Frape, S.K. (Earth Sciences)
An evaluation of the proposed mantle-crustal component to oil and gas accumulations in sedimentary basins of Southwest Ontario, \$5,000.00.

University of Western Ontario

MacRae, N.D. (Geology)
Rare earth elements in whole rocks and selective minerals of Topsails Igneous Terrane, Newfoundland, \$3,000.00.

Mansinha, L. (Geophysics)
Resolution in Mise-a-la-Masse Electrical Exploration, \$5,000.00.

Mereu, R.F. (Geophysics)
Interpretation of data from the 1986 Great Lakes Seismic Experiment, \$9,000.00.

Palmer, H.C. (Geophysics)
Paleomagnetism applied to the tectonic development of the Stikine Terrane, \$9,500.00.

Plint, A.G. (Geology)
Upper Cretaceous Event-Stratigraphy: A case study in the Muskiki and Bad Heart formations, Alberta and B.C., \$5,000.00.

University of Windsor

Simpson, F. (Geology)
Cross-formational flow of groundwater related to solution-generated collapse (SGC) structures, \$5,000.00.

QUÉBEC

INRS Rimouski

Boczar-Karakiewicz, B. (Oceanology)
Formation of sand ridges on the Continental Shelf by progressive surface waves (with applications to the Scotian Shelf Sable Island Bank), \$6,500.00.

Koutitonsky, V.G. (Océanologie)
Étude du cône deltaïque de la rivière Natashquan: Hydrodynamique et transport de sédiments, \$8,500.00.

INRS Sainte-Foy

Schrijver, K. (Géoressources)
Indices de grès plombifères des Appalaches du Québec: géologie et importance métallogénique, \$7,000.00.

Université Laval

Allard, M. (Centre d'études nordiques)
Étude en suivi du perégélisol côtier, détroit de Manitousuk, Québec, \$8,300.00.

Filion, L. (Géographie)
Analyse dendrochronologique des glissements de terrain de la vallée de la rivière du Gouffre, Charlevoix, Québec, \$7,800.00.

McGill University

Doig, R. (Geological Sciences)
A paleoseismic method based on abnormal silting in lake sediments, \$4,000.00.

Doig, R. (Geological Sciences)
Geochronology of granite rocks of the southern Quebec Appalachians, \$4,000.00.

Francis, D. (Geological Sciences)
The marginal rocks of the Muskox Intrusion, N.W.T., \$8,000.00.

Granberg, H.B. (Geography)
Schefferville permafrost research, \$5,000.00.

Hesse, R. (Geological Sciences)
Mid-Ocean channel processes, Labrador Sea, \$4,600.00.

Hynes, A. (Geological Sciences)
Tectonic evolution of the Labrador Trough at 58°W, \$8,000.00.

Jensen, O.G. (Geological Sciences)
Geological mapping in tropical terranes by transient AEM (Airborne Electromagnetic) systems, \$5,000.00.

Mountjoy, E.W. (Geological Sciences)
Tectonothermal evolution of Miette Group strata, northern Park Ranges, eastern British Columbia (parts of 83 D/7, 8, 9, 10 and 15), \$10,500.00.

Université de Montréal

Gray, J.T. (Geography)
Quaternary studies in the Cap de la Nouvelle-France sector of northern Ungava, \$9,000.00.

Hubert, C. (Géologie)
Étude structurale des gisements aurifères de Bousquet Dumagami, du district de Malartic, de Kiena-Callahan de Moberum-Yvan Vézina (Destor) de la propriété Vior, et de Golden Pond East-Agnico Eagle, et leur intégration dans un contexte de tectonique globale de la ceinture de l'Abitibi, \$11,500.00.

Mamet, B. (Geology)
Carboniferous foraminifers and algae, Saskatchewan, Alberta and Districts of Mackenzie and Franklin, \$6,000.00.

Martignole, J. (Géologie)
Evolution tectonique de l'anorthosite de Bouchette, province de Grenville, \$6,000.00.

Trzcinski, W.E. (Geology)
Evaluation of the economic potential and the geologic setting of chromite and platinum group metals in the Québec Ultramafic Belt, \$13,000.00.

Université du Québec à Chicoutimi

Sawyer, E.W. (Earth Sciences)
Vein formation in quartz-free rocks, \$4,500.00.

Université du Québec à Montréal

de Vernal, A. (Géochimie)
Micropaléontologie et géochimie isotopique des sédiments récents de milieux de transition (golfe du Saint-Laurent, baie d'Hudson), \$5,400.00.

Gariépy, C. (Sciences de la Terre)
Géochimie des isotopes stables dans les filons post-oroviciens de Grenville et des basses-terres (Québec et Ontario), \$2,000.00.

Mareschal, J.-C. (Earth Sciences)
Determination of the crustal structure of the northern Labrador Trough by gravity measurements, \$7,000.00.

NEW BRUNSWICK

University of New Brunswick

Burke, K.B.S. (Geology)
Investigation of neotectonic features in southwestern New Brunswick, \$5,750.00.

Derenyi, E.E. (Surveying Engineering)
Utility of remote sensing imagery for mapping, \$4,000.00.

Kleusberg, A. (Surveying Engineering)
GPS for airborne gravimetry, \$5,750.00.

Langley, R.B. (Surveying Engineering)
Performance and analysis of VLBI observations in Canada for the NASA Crustal Dynamics Project, \$4,500.00.

NOVA SCOTIA

Acadia University

Van Wagoner, N.A. (Geology)
The volcanism and geochemistry of parts of the Endeavor and Explorer Ridges: Juan de Fuca Ridge System, \$7,000.00.

Dalhousie University

Boyd, R. (Geology)
Marine sedimentology of the Scotian Shelf, \$5,500.00.

Huntley, D.A. (Oceanography)
Waves, currents and turbulence in shelf boundary layers, \$9,000.00.

Louden, K.E. (Oceanography)
Seismic refraction observations in the Labrador Sea, \$12,500.00.

Louden, K.E. (Oceanography)
Arctic heat flow, \$7,500.00.

NEWFOUNDLAND

Memorial University

Aksu, A.E. (Earth Sciences)
Late Quaternary biostratigraphy and sedimentology of the West Coast of Newfoundland (Bonne Bay, Bay of Islands and St. Georges Bay), \$9,000.00.

78 List of grant awards in the earth sciences for 1987-88/
Liste des subventions attribuées aux sciences de la Terre en 1987-88

- Hiscott, R.N. (Earth Sciences)
Identification of source terranes for Lower Paleozoic sandstones of West Newfoundland, \$6,000.00.
- Hodych, J.P. (Earth Sciences)
Paleomagnetism of the Cambrian volcanics of the Avalon Peninsula of Newfoundland, \$4,000.00.
- Macpherson, J. (Geography)
Late glacial and Holocene marine and terrestrial palynostratigraphy, Newfoundland, \$5,500.00.
- Murthy, G.S. (Earth Sciences)
Paleomagnetic investigation of Paleozoic (and Precambrian) rock formations from the Island of Newfoundland and interpretation of results in terms of tectonics, \$5,000.00.
- Rogerson, R.J. (Geography)
Glacial geology of the Nachvak Fiord area, Northern Labrador, \$2,000.00.
- Westrop, S.R. (Earth Sciences)
Trilobite biostratigraphy of the Sullivan and Lyell formations (Upper Cambrian), Southern Canadian Rocky Mountains, Alberta, \$5,000.00.
- Williams, H. (Geology)
Early Paleozoic tectonic-stratigraphic terranes of the Newfoundland Dunnage Zone, \$9,000.00.
- Wright, J.A. (Earth Sciences)
Seismic measurements across terrane boundaries in Newfoundland, \$7,000.00.

Department of Energy, Mines and Resources Contracts Awarded to Canadian Universities 1987-88/
Contracts accordés aux universités canadiennes par le ministère de l'Énergie, des Mines et des Ressources, 1987-88

BRITISH COLUMBIA

University of British Columbia

- Barnes, M. (Geological Sciences)
Organic diagenesis in modern, older and ancient environments, \$19,994.00.
- Barnes, W.C. (Geological Sciences)
Sedimentological studies in the Queen Charlotte Islands, \$14,303.00.
- Bustin, M. (Geological Sciences)
Document lateral and stratigraphic variation of organic maturity in the Queen Charlotte Islands (Part of the program of the Federal Panel on Energy R&D - PERD), \$14,880.00.
- Ellis, R.M. (Geophysics and Astronomy)
Study of crustal structure in the Peace River Arch area - phase III, \$21,000.00.
- Ellis, R.M. (Geophysics and Astronomy)
Seismic data collection at selected sites on the west coast of B.C., \$10,500.00.

Finn, W.D.L. (Civil Engineering)
MOLIKPAQ geotechnical study, \$61,380.00.

Greenwood, H.J. (Geological Sciences)
Metamorphism in the northwestern portion of the Shuswap complex and surrounding rocks, Clearwater Lake area, British Columbia, \$10,054.00.

MacKay, R.J. (Geography)
Study of the development of permafrost and ground ice - western Arctic Coast region - phase III, \$54,966.00.

Ross, J.V. (Geological Sciences)
Structural studies in the Queen Charlotte Islands, \$15,371.00.

ALBERTA

University of Alberta

- Jones, F. W. (Physics)
Investigation of the terrestrial heat flow of the Sverdrup Basin, Canadian Arctic Islands and its relation to hydrocarbon maturation and migration, \$29,696.00.
- Lerbekmo, J.F. (Geology)
Magnetostratigraphic correlations in Upper Cretaceous strata between the plains and foothills of southern Alberta, \$3,018.00.
- Majorowicz, J.A. (Physics)
Study of the sub-permafrost deep terrestrial heat flux in the areas of natural occurrence of gas hydrates in the Canadian North, \$30,000.00.

Peterson, A.E. (Civil Engineering)
Nahanni rock slide - digital model, \$1,500.00.

Rutter, N.W. (Geology)
Determination of amino acid ratios of fossil wood from the Timmins area of northern Ontario, \$2,600.00.

Sego, D.C. (Civil Engineering)
Study of sample preparation of sand containing a gas hydrate - phase IV, \$27,338.00.

University of Calgary

Butler, R. (Engineering)
Feasibility study of the soluble-vapour, gravity assisted recovery technique for heavy crudes and bitumen, \$200,000.00.

Cook, F.A. (Geology and Geophysics)
Acquisition, processing and interpretation of marine or onshore deep seismic reflection data from the southern Beaufort Sea margin, \$24,559.00.

Lawton, D.C. (Geology and Geophysics)

Technological and methodological development to improve seismic acquisition and processing of high resolution shallow digital seismic reflection data, \$24,001.00.

Schwarz, K.P. (Geology and Geophysics)
The GEOID in northern British Columbia, \$11,993.00.

Simony, P. (Geology and Geophysics)
Stratigraphy and structure of Windermere Supergroup adjacent to southern Rocky Mountain Trench, British Columbia, \$14,978.00.

Spratt, D. (Geology and Geophysics)
Study and report on structural style related to thickness changes, Mesozoic lithofacies, foothills and front ranges, southern Alberta, \$15,000.00.

SASKATCHEWAN

University of Regina

Potter, J. (Geology)
Study of the original petrology of Paleozoic and Mesozoic source rocks in Saskatchewan - phase I. (Part of the program of the Federal Panel on Energy R&D - PERD), \$12,000.00.

Watters, B. (Geology)
Investigation of the mafic-ultramafic bodies in the Bassett Lake - Dead Lake area of northern Saskatchewan, \$17,068.00.

University of Saskatchewan

Caldwell, W.G.E. (Geological Sciences)
Silurian biostratigraphy and rhyconellid brachiopod faunas of the Beaverfoot and Nonda formations, British Columbia, \$10,860.00.

Hajnal, Z.H. (Geological Sciences)
Interpretation of crustal structure in the
Peace River Arch area - phase II, \$7,000.00.

Kyser, T.K. (Geological Sciences)
Isotopic analyses of rock and mineral
samples from Careen Lake, \$6,000.00.

Langford, F.F. (Geological Sciences)
Salt anomaly prediction - phase I -
improved understanding and predictability
of salt anomalies in potash mines,
\$30,000.00.

MANITOBA

University of Manitoba

Halden, N.M. (Earth Sciences)
Characterization of the geochemical
variability of the Falcon Lake Igneous
Complex, southeastern Manitoba,
\$9,000.00.

Moon, W. (Earth Sciences)
Study of the mineralization in Lynn Lake,
northern Manitoba - phase II, \$11,000.00.

ONTARIO

Brock University

Arkani-Hamed, J. (Geophysics and
Astronomy)
Geophysical interpretation of marine
magnetic anomalies of Labrador Sea and
Orphan Basin, \$24,100.00.

Carleton University

Bell, K. (Geology)
Continued development and application of
methods for using the Sm/Nd isotopic
system to determine the age of gold
mineralization in the Canadian Shield,
\$62,405.00.

Blenkinsop, J. (Geology)
Lead isotope analyses of galena or
comparable Pb-rich samples and of pyrite,
comparable low-Pb sulphides or seafloor
sedimentary material, \$9,651.00.

Donaldson, J.A. (Geology)
Diagenesis of middle Proterozoic basins,
Churchill and Bear Provinces, \$10,000.00.

Michel, F.A. (Earth Sciences)
Isotope and salinity analysis and
interpretation of subsea permafrost
samples, \$10,501.00.

Smith, M.W. (Earth Sciences)
A detailed study of the physical and
thermal properties of Norman Wells-Zama
Pipeline core specimens, \$14,041.00.

Watkinson, D.H.,

Dahl, R. (Earth Sciences)
Compilation, microprobe analysis and
scientific writing for Geological Survey of
Canada paper "Bay of Islands Ophiolite
Complex: Mantle Processes and
Metallogeny", \$7,500.00.

University of Ottawa

Fowler, A.D. (Geology)
Continuation of the study of the mineral
resource potential of the Dyke and Howse
Lakes, Labrador, \$18,300.00.

Queen's University

Dixon, J.M. (Geological Sciences)
Study of stratigraphy and structure along
the eastern boundary of the main ranges in
the southern Kananaskis map area, British
Columbia, \$6,008.00.

Dyke, L. (Geological Sciences)
Mechanics of bedrock frost heaving in
permafrost, \$26,738.00.

Young, R.P. (Geological Sciences)
Seismic characterization of discontinuities
and anomalous rock quality within mine
surface crown pillars using attenuation
and velocity imaging techniques,
\$289,768.00.

University of Toronto

Kieser, W.E. (Isotrace Laboratory)
Radiocarbon dating of shell and wood
samples by the technique of accelerator
mass spectrometry, \$9,680.00.

Kieser, W.E. (Isotrace Laboratory)
Radiocarbon dating of shell and organic
matter samples by the technique of
accelerator mass spectrometry, \$6,960.00.

Kieser, W.E. (Isotrace Laboratory)
Isotopic analyses of organic samples,
\$5,000.00.

Kaiser, W.E. (Physics)
Radiocarbon dating of planktonic
Foraminifera sample, \$1,080.00.

Naldrett, A.J. (Geology)
Study of the behaviour of noble metals in
the Lac des Isles complex, northwestern
Ontario, \$19,917.00.

University of Waterloo

Konrad, J.M. (Earth Sciences)
Ice formations in saline soils, \$65,098.00.

Patton, M.E. (Geological Sciences)
Hydrogen isotope analysis (sd), \$2,537.00.

University of Western Ontario

Lo, K.Y. (Engineering Science)
Reviewer evaluation of molipaq
geotechnical study, \$46,737.00.

McIntyre, N.S. (Surface Science)
Ion probe microanalysis of gold in common
sulphide minerals and implications for
enhanced recovery from refractory gold
ores, \$154,582.00.

QUÉBEC

École Polytechnique

Ladanyi, B. (Civil Engineering)
Determination of creep properties of frozen
soils by means of the borehole dilatometer
relaxation text, \$119,955.00.

Laval University

Chagnon, J.-Y. (Geophysics)
Operation of the seismography station at
Quebec City, Quebec from April 1, 1988 to
March 31, 1989, \$2,900.00.

McGill University

Francis, D.M. (Geological Sciences)
X-ray fluorescent analysis of major and
trace elements, \$3,990.00.

Mountjoy, E.W. (Geological Sciences)
Regional strain analysis in the Mountain
Park, Miette and Cadomin areas, eastern
Rocky Mountains, Alberta, \$25,006.00.

University of Montréal

Mamet, B.L. (Geology)
Manuscript on microfacies analysis of
upper Carboniferous and Permian
carbonate rocks of Ellesmere Island. (Part
of the Program of the Federal Panel on
Energy R&D - PERD), \$15,133.00.

Peloquin, S. (Geology)
Impact of geology on the decline of maple
forests in the Eastern Townships of Quebec,
\$32,328.00.

Richard, P. (Geography)
Pollen analysis of sediment cores from
Timmins, Ontario area, \$15,000.00.

St-Jean-De-Brébeuf College

Gouin, Father P.
Historical seismicity of Quebec - phase II,
\$4,000.00.

Université du Québec à Montréal

Gauthier, M. (Earth Sciences)
Gold metallogeny in southwest Grenville
County, \$29,000.00.

Lamoth, M. (Geology)
Geology of the Quaternary and
geochemistry of the tills of New Brunswick,
\$39,369.00.

Université du Québec à Québec

Achab, A. (Sciences de la terre)
Assessment of alteration indices and
optical reflectance characteristics of core
and outcrop samples from northern Yukon
and western Northwest Territories,
\$16,063.00.

Schrijver, K. (Géoresources INRS)
Metallogeny of the St. Fabien region,
\$38,000.00.

80 List of grant awards in the earth sciences for 1987-88/
Liste des subventions attribuées aux sciences de la Terre en 1987-88

NEW BRUNSWICK

University of New Brunswick

Noble, J.P.A. (Geology)

Study of the sedimentology and diagenesis of the Albert Formation, eastern New Brunswick, \$33,000.00.

Rawlence, D. (Biology)

Diatom analysis of lake sediment core from Cape Breton Island, New Brunswick, \$3,500.00.

Vanicek, P. (Surveying Engineering)

Development of a map of vertical crustal movements in Canada, \$66,504.00.

Williams, P.,

Ruixiang, G. (Geology)

Microstructural study of late Paleozoic faults in northern Nova Scotia, \$30,000.00.

NOVA SCOTIA

Acadia University

Barr, S.M. (Geology)

The Fourchu Group and associated granitoid rocks of southeastern Cape Breton Island, Nova Scotia, \$49,803.00.

Barr, S.M. (Geology)

Geological field mapping, eastern Caledonian Highlands, New Brunswick, \$12,940.00.

Van Wagoner, N.A. (Geology)

Volcanic stratigraphy, structure, geochemistry and mineralization of the lower Eastport Formation of New Brunswick, \$21,142.00.

Dalhousie University

Boyd, R. (Geology)

Rates of subsidence and restored sedimentation Celtic, Lusitanian, Jeanne D'Arc and Labrador Basins, \$2,640.00.

Culshaw, N.G. (Geology)

Georgian Bay geological synthesis, Phase I, \$58,280.00.

Gibling, M. (Geology)

High resolution stratigraphy, spectral analysis and burial history of Lower Cretaceous drill sites, \$8,819.00.

Grant, J. (Oceanography)

Studies of animal-seabed relationships in order to evaluate their effects on sediment thresholds for erosion and rates of seabed erosion in a variety of seabed sites, \$30,938.00.

Mayer, L. (Oceanography)

Analytical service for a research sediment velocimeter and related measurements and interpretation, \$17,463.00.

Ryall, P. (Geology)

Technical support for operation of the Bedford-Dalhousie electric diamond drill on board the CGV John P. Tully, \$27,995.00.

Ryall, P. (Geology)

Geodynamics of sedimentary basins and rifted margins - Grand Banks region, \$8,000.00.

Scott, D. (Geology)

Stable isotope analysis of Foraminifera from Core 85027-57 in Hudson Strait, \$1,782.00.

Scott, D. (Geology)

Stratigraphic study of eastern Lake Erie, \$15,000.00.

Technical University of Nova Scotia

Cole, C. (Minerals Engineering)

Preparation and analysis of rock samples from Yava lead deposit, Nova Scotia, \$1,750.00.

NEWFOUNDLAND

Memorial University

Botsford, J. (Earth Sciences)

Geochemistry and petrology of Lower Paleozoic Platform - equivalent shales, western Newfoundland, \$40,409.00.

Calon, T.,

Malpas, J. (Earth Sciences)

Determination of the geological structure and deformation history of selected areas containing chromite deposits in the Bay of Islands ophiolite complex, Newfoundland - Phase III, \$23,000.00.

Fryer, B.J. (Earth Resource Research)

High precision and rare earth element analyses of volcanic rocks from the Roberts Arm Group, central Newfoundland, \$17,437.00.

Fryer, B.J. (Earth Sciences)

Geochemical analyses, \$4,500.00.

Gale, J.,

Welhan, J. (Geology)

Continuation of a study of the groundwater in the area of Daniel's Harbour Mine, Newfoundland, \$29,928.00.

Guigne, J.Y. (C-Core)

Correlation of acoustic and geotechnical properties of uniform saturated silica sands using the acoustic subseabed interrogator technology, \$27,000.00.

Lever, J. (Cold Ocean Resources Engineering)

Dynamics interpretation of iceberg scour, \$22,970.00.

MacPherson, J. (Geography)

Palynological study for Avalon Sea level change, \$1,653.00.

Morin, P. (Engineering)

Stress history and strength of sediments from the Narwal sites, \$5,991.00.

Rivers, T.,

Calon, T. (Earth Sciences)

Continuation of the structural studies in the Grenville Front Tectonic zone near Wabush, Labrador, \$13,000.00.

Williams, H. (Earth Sciences)

Study on the geology of the Appalachian Orogen in Canada and the Phanerozoic of East Greenland, \$84,750.00.

Wilton, D. (Earth Sciences)

Study of metallogeny of central Labrador mineral belt - phase II. (Part of the Bioenergy Development Program), \$76,065.00.

Woodworth-Lynas, C. (C-Core)

Sediment deformation by ice scour, \$33,031.00.

Polar Continental Shelf Project Field Support Non-Governmental Activities 1987-88/
Plateau continental polaire en faveur d'activités non gouvernementales pour 1987-88

BRITISH COLUMBIA

University of British Columbia

Bowen, C.R.
Geomorphology, Mackenzie Delta, District of Mackenzie.

Jung, A.
Geology-stratigraphy, Ellesmere Island, District of Franklin.

ALBERTA

University of Alberta

Chatterton, B.D.E.
Geology-paleontology, Arctic Islands.

England, J.
Geology-Quaternary glaciation, northern Ellesmere Island, District of Franklin.

Kerr, D.E.
Geology-stratigraphy, Tuk, Paulatuk, Coppermine, Bathurst Inlet.

Smith, D.G.W.
Geology-meteorites, Devon Ice Cap, Barnes Ice Cap.

Tyrrell Museum

Johnston, P.A.
Geology-paleontology, Melville Island, Prince Patrick Island, District of Franklin.

SASKATCHEWAN

University of Saskatchewan

Basinger, J.F.
Geology-paleontology, Axel Heiberg Island, District of Franklin.

MANITOBA

University of Manitoba

Lehn, W.H.
Geophysics-refraction, Resolute, Cornwallis Island, District of Franklin.

University of Winnipeg

Krawetz, M.T.
Geology-sediments, east-central Ellesmere Island, District of Franklin.

ONTARIO

Carleton University

Michel, F.A.
Geology-ground ice, Mackenzie Delta, Herschel Island.

University of Guelph

Martini, I.P.
Geology-geomorphology, Foxe Basin islands, District of Franklin.

Laurentian University

Dewing, K.
Geology-stratigraphy, Southampton Island, District of Keewatin.

McMaster University

Woo, M.
Hydrology, Resolute, Cornwallis Island, District of Franklin.

University of Ottawa

Bennett, L.P.
Geology-permafrost, Rae Point.

Dixon, O.A.
Geology-sedimentology, stratigraphy, southwest Devon Island, District of Franklin.

French, H.M.
Geology-geomorphology, permafrost, Banks Island and Yukon Territory.

University of Toronto

Lewkowicz, A.G.
Geology-ground ice, Fosheim Peninsula.

Ritchie, J.C.
Geology-lake sediments, Tuktoyaktuk, District of Mackenzie.

Trent University

Adams, W.P.
Glaciology, White Glacier, Axel Heiberg Island, District of Franklin.

Bednarski, J.
Geology-Quaternary paleogeography, Nansen Sound.

University of Western Ontario

King, R.H.
Geomorphology, Truelove Lowlands.

Lenz, A.C.
Geology-paleontology, Cornwallis Island, District of Franklin.

Mallano, M.
Geology-reefs, Ellesmere Island, District of Franklin.

Pearce, C.M.
Geomorphology, Mackenzie Delta, District of Mackenzie.

Rainbird, R.R.
Geology-stratigraphy, sedimentology, Victoria Island.

NOVA SCOTIA

Dalhousie University

Louden, K.E.
Geophysics-geothermal, Arctic Ocean (Ice Island).

Muecke, G.K.
Geology-volcanics, Ellesmere and Axel Heiberg islands, District of Franklin.

NEWFOUNDLAND

Memorial University of Newfoundland

Burden, E.
Geology-biostratigraphy, Bylot Island, northern Baffin Island.

Macko, S.A. and Aksu, A.E.
Chemical oceanography, sediments, Arctic Ocean (Ice Island).

Pollard, W.H.
Geology-geomorphology, Beaufort Sea coast.

U.S.A.

University of Alaska

Jefferies, M.
Glaciology, northwestern Ellesmere Island, Resolute, Mould Bay, Ice Island.

Carnegie Museum

Dawson, M.
Geology-stratigraphy, Ellesmere, Axel Heiberg and Devon islands, District of Franklin.

University of Cincinnati

Vestal, J.R.
Geology-paleontology, Eureka.

John Hopkins University

De Paor, D.
Geology-structural, Ellesmere Island, District of Franklin.

University of Iowa

Swett, K.
Geology-sedimentology, Aston Bay, Somerset Island.

University of Massachusetts

Bradley, R.S. and Retelle, M.
Geology-sediments, northern Ellesmere Island, District of Franklin.

82 List of grant awards in the earth sciences for 1987-88/
Liste des subventions attribuées aux sciences de la Terre en 1987-88

University of Miami

Plane, J. and Zika, R.
Chemical oceanography, Arctic Ocean (Ice Island).

Purdue University

Zinsmeister, W.J.
Geology-paleontology, Strathcona Fiord, Fosheim Peninsula.

University of Washington

Waddington, E.D.
Glaciology, Ellesmere Island, District of Franklin.

Washburn, A.L.

Geology-periglacial processes, Cornwallis Island, District of Franklin.

GERMANY

U. Justus Liebig

King, L.
Glaciology, Hare Fiord, Expedition Fiord, Oobloyah Bay.

JAPAN

Hokkaido University

Fujino, K.
Ice coring, paleoclimatology, Tuktoyaktuk, District of Mackenzie.

Ontario Geological Survey, Geoscience Research Grants, 1987-88/
Commission géologique de l'Ontario subventions de recherche en sciences de la terre pour 1987-88

Brock University

Haynes, S.J.
Gypsum deposits of southern Ontario, \$16,480.00.

Carleton University

Taylor, R.R., Watkinson, D.H.
Geological, fluid inclusion, and isotopic studies of gold-bearing vein systems in the Cameron Lake and Monte Cristo Shear Zones, northwestern Ontario, \$20,200.00.

University of Guelph

Campbell, J.L.
Software development for Micro-PIXE Analyses of mineralogical specimens, \$21,720.00.

Lakehead University

Fralick, P.U., Burton, J.P.,
Placer formation in braided river systems, \$5,197.00.

Kissin, S.A.

The genesis of silver vein deposits in the Thunder Bay area, \$5,500.00.

Laurentian University

Whitehead, R.E., Beswick, T.
Remote sensing and geobotany as an aid to mineral exploration in northern terrains, \$55,000.00.

McMaster University

Crockett, J.H., Dickin, A.P.
A lead isotope study of gold mineralization in the Dome Mine quartz-fuchsite vein environment, \$18,320.00.

University of Ottawa

Hattori, K.
Study of gold mineralization and alteration at the Lake Shore Mine, Kirkland Lake, \$25,720.00.

Queen's University

Mason, R.
Geological setting of gold deposits in the Timmins Mining Camp, \$31,880.00.

Nichol, I., Shaw, J.

Quaternary geology and geochemical exploration in the Matheson area, \$23,900.00.

Smith, L.

Karst episodes and permeability development, Silurian reef reservoirs, southwestern Ontario, \$13,189.00.

University of Toronto

Bailey, R.C.
Improved computer interpretation of gravity and magnetic dating, \$15,100.00.

Gorton, M.P.

Physical and chemical processes of Archean subaqueous pyroclastic rocks, \$14,224.00.

Schwerdtner, W.M.

Deformation of the Sudbury structure and its footwall, \$21,360.00.

Spoooner, E.T.C.

Controls on unusual gneissic tonalite/trondhjemite hosted gold mineralization, Renabie Mine, Missanabie, \$20,248.00.

University of Waterloo

Frape, S.K., McNutt, R.H., Fritz, P., Macqueen, R.W., Coniglio, M.
Geochemical studies of formation waters, Paleozoic strata, southwestern Ontario, \$18,810.00.

Karrow, P.F., Greenhouse, J.P., Dusseault, M.B.

Subsurface Quaternary stratigraphy using borehole geophysics, \$31,307.00.

Warner, B.G., Nobec, D.C.

Application of surface radar sounding techniques in peatland inventories, southern Ontario, \$14,250.00.

University of Western Ontario

Edgar, A.D.

The geochemical origin and economic potential of platinum group element (PGE) bearing rocks of the Lac des Iles Intrusion, \$11,165.00.

Fleet, M.

Metamorphic petrology of the White River gold prospect, Hemlo area, \$25,010.00.

Fyfe, W.S.

Metal accumulation in microorganisms with emphasis on uranium, gold, silver, copper, zinc and iron, \$33,720.00.

Hicock, S.

Light minerals and specialty sand in southern Ontario, \$19,380.00.

British Columbia Geological Survey, Geoscience Research Grants, 1987-88/
Commission géologique de la Colombie-Britannique subventions de recherche en sciences de la terre pour 1987-88

BRITISH COLUMBIA

University of British Columbia

Bradford, J.
Genesis of the Silver Creek carbonate -
hosted deposit Midway area, \$2,000.00.

Broatch, J.
Palynological zonation and correlation of
the Peace River coalfield (Minnes
Formation, Jurassic-Cretaceous),
\$6,500.00.

Fletcher, W.K.
Geochemical exploration methods for gold
in stream sediment, \$6,000.00.

Godwin, C.
Pb isotope analyses to guide exploration,
\$5,000.00.

Leitch, C.
Bralorne - Pioneer gold vein system,
\$2,000.00.

Mader, U.
Aley carbonatite, northern Rocky
Mountains, \$5,000.00

Orchard, M.J.
Conodont studies, Kechiko Trough,
\$5,000.00.

Payne, D.
Warner Pass petrology, \$3,000.00.

Reddy, D.
Geology of the Indian River/Britannia
volcanic belt, \$10,500.00.

University of Victoria

Van der Flier-Keller, E.
Nanaimo-Comox coal deposits, \$3,000.00.

ALBERTA

University of Alberta

Nesbitt, B.
Sulphur isotopes, \$1,000.00.

Persaud, E.
Slocan Group mapping and geochemistry,
\$5,000.00.

Plint, H.
Horseshoe Range, north-central British
Columbia, \$3,500.00.

ONTARIO

Carleton University

Johnson, B.
Sicamous area, regional mapping,
\$4,000.00.

Melling, D.
Q.R. gold deposit geological setting,
\$5,000.00.

Ruble, J.
Tulameen Ultramafic Complex,
south-central British Columbia, \$6,000.00.

Queen's University

Ijewliw, O.
Golden ultramafic diatremes, southeastern
British Columbia, \$5,000.00.

University of Western Ontario

MacDonald, D.
Silbak-Premier ore minerals, \$2,000.00.

QUEBEC

McGill University

Bellefontaine, K.
Ingenika Range, Swannell River -
Johansen Lake area, north-central British
Columbia, \$3,500.00.

U.S.A.

Colorado School of Mines

Garrioch, N.
Lead isotopes, Nelson area, southeastern
British Columbia, \$5,000.00.

Natural Sciences and Engineering Research Council Canada Strategic Grants 1987-88/
Subvention thématiques données par le Conseil de recherches en sciences naturelles et en génie du Canada 1987-88

BRITISH COLUMBIA

University of British Columbia

Isaacson, M. (Civil Engineering)
Combined wave-current effects on
structures, \$114,000.00.

Pond, G.S. (Oceanography), Farmer, D.M.
(Fisheries and Oceans), Dunbar, D.
(Seaconsult Marine Research Ltd.)
Numerical modeling and measurements of
the circulation of British Columbia fiords,
\$83,570.00.

ALBERTA

University of Alberta

Toth, J. (Geology)
Development of a hydrogeological approach
to petroleum exploration, \$75,200.00.

SASKATCHEWAN

University of Saskatchewan

De Jong, J., Acton, D.F. (Soil Science)
Soil erosion in Saskatchewan: Rates,
impacts and amelioration, \$65,000.00.

ONTARIO

University of Lakehead

Puttagunta, V.R. (Chemical Engineering)
Development of a correlation to predict
viscosity of Canadian bitumens/heavy oils
at in situ process conditions, \$34,600.00.

University of McMaster

Crocket, J.H. (Geology)
Potential of uraniumiferous conglomerates at
Elliot Lake, Ontario, for by-product
platinum group minerals recovery,
\$15,000.00.

Dickin, A.P., Crocket, J.H., McNutt, R.H.
(Geology)

Re-Os dating of platinum group elements
and gold deposits, \$32,750.00.

Kershaw, K.A., Rouse, W.R., Woo, M.K.
(Biology)

Modelling the impacts of impoundment on
the coastal marshes of western James Bay,
\$55,000.00.

Walker, R.G. (Geology)

Origin of reservoir sandstones and
conglomerates, Alberta \$53,050.00.

University of Queen's

Kamphuis, J.W. (Civil Engineering)
Hydraulic model research on the physics of
sediment transport by waves, \$54,560.00.

84 List of grant awards in the earth sciences for 1987-88/
Liste des subventions attribuées aux sciences de la Terre en 1987-88

Young, R.P., Hutchins, D.A. (Geological Sciences)
Rock burst investigations using concurrent tomographic imaging and acoustic emission techniques, \$60,000.00.

University of Toronto

Edwards, R.N. (Physics)
The development of sea floor electromagnetic mapping methods, \$31,500.00.

Greenwood, B. (Geology/Geography), Bower, A.J. (Dalhousie, Geology)
Nearshore sediment transport, \$94,620.00.

Mackay, D. (Environmental Studies)
A study of hydrocarbon partitioning in the marine environment, \$39,500.00.

Scott, S.D. (Geology), Chase, R.L. (British Columbia, Geological Sciences)
Tectonics, sulphides and robots in the Canadian Pacific, \$130,000.00.

Spooner, E.T.C. (Geology)
Archean gold-quartz vein ore deposits; testing a complete genetic solution and exploration litho geochemistry, \$75,000.00.

University of Waterloo

Dusseault, M.B., Rothenburg, L. (Earth Sciences)
Salt rock geomechanics, \$80,000.00.

Fritz, P., Frape, S.K. (Earth Sciences), Macko, S.A., Welhan, J.A. (Memorial, Earth Sciences).
Isotope geochemistry of hydrocarbons in crystalline rocks, \$41,250.00.

Warner, B.G., Fritz, P. (Earth Sciences)
Paleobiological and environmental isotope investigation of peat deposits in Ontario, \$40,000.00.

NEW BRUNSWICK

University of New Brunswick

Landva, A.O., Valsangkar, A.J., Law, K.T. (Civil Engineering)
Progressive failure in soft soils, \$237,600.00.

NOVA SCOTIA

University of Dalhousie

Beaumont, C., Reynolds, P.H., Zentilli, M. (Oceanography, Geology)
Geodynamics and thermal evolution of rifted margins and their flanks, \$74,220.00.

Louden, K.E. (Oceanography)
Arctic heat flow, \$74,500.00.

Scott, D.B., Mediolli, F.S., Mayer, L.A. (Centre Marine Geology)
Quaternary studies of North Atlantic ODP sites, \$88,000.00.

NEWFOUNDLAND

Memorial University of Newfoundland

Guigne, J.Y., Clark, J.I., Nadreau, J.P. (C-Core)
An integrated investigation into the processes ice keel/soil interaction, \$100,000.00.

Jordaan, I.J., Muggeridge, D.B., Nadreau, J.P., Frederking, R.M.W., Jones, S.J., Swamidas, A.S.J. (Ocean Engineering)
Ice-induced vibrations in structures, \$78,120.00.
