This map was compiled from digitally recorded high-sensitivity aeromagnetic data using an inboard cesium magnetometer which measured the total field with a resolution of 0.005 nT. Loran C was used to navigate the aircraft and recover the flight path. Flight altitude was 300 m above surface.

The aeromagnetic data, levelling and total field magnetic values interpolated on a square grid by computer processes.

Airborne survey and digital compilation was carried out by the Geophysics Division, Geological Survey of Canada. The survey operation took place during July and September 1988 using a Beechcraft Queenair B-200 aircraft C-FWZ3.

No correction has been made for regional gradient of the earth's magnetic field.

The digital data used in the compilation of this map can be purchased from the Geological Data Centre, Geological Survey of Canada, Ottawa, Ontario, Canada.

The topography for this map was reproduced from 1:250,000 topographical map sheets supplied by the United States Geological Survey.

This map was compiled from 1:250,000 topographical map sheets supplied by the United States Geological Survey.

The present map is composed of data from the 1:250,000 topographical map sheets supplied by the United States Geological Survey.
