Compiled by K. E. Ricker and L. McLennan
Drawn by G. R. Dumas

First Edition: March, 1975

LEGEND & NOTES

Trackline on which cores were taken. Bracketed number is the line reference code; the open numerals on the line refer to the number of core sites on that section, of which there are samples stored at the Geological Survey of Canada offices in Vancouver. Of the remaining samples stored or consumed elsewhere brief sediment description have been catalogued.

Trackline on which cores were taken but there is neither a trackline number nor a sample at the G.S.C. offices. Not shown are a few isolated samples for which there is also no sample for examination. The same geographic region as well as adjacent waterways have also been extensively sampled and briefly described by the Fisheries Research Board of Canada in past years. However, the number of samples available for study are very few; hence, their locations are not shown on this map.
