**AIRBORNE RADIOACTIVITY MAP**  
**MONT-LAURIER**  
**QUEBEC**

POTASSIUM (137-137Mm)

The map is a contour map showing the distribution of potassium-40 in the Mont-Laurier area. The data was obtained from an aerial survey conducted in 1971. The map shows contour lines representing the concentration of potassium-40 in the soil. The concentration is highest in the central part of the map and decreases towards the edges. The map also shows the location of the Mont-Laurier Reservoir and other geographical features.
