

AIRBORNE RADIOACTIVITY MAP
MONT - LAURIER
QUEBEC

URANIUM POTASSIUM RATIO

The gamma radiation counter shown on the map is a portable unit which is used to measure the gamma radiation from the ground which is caused by the presence of uranium and potassium in the soil. The counter is a type of Geiger-Muller counter which is used to measure the radioactivity of the soil. The counter is used to measure the radioactivity of the soil in a grid pattern. The counter is used to measure the radioactivity of the soil in a grid pattern. The counter is used to measure the radioactivity of the soil in a grid pattern.

Scale 1:50,000
 1 cm = 500 m
 1 inch = 12500 feet
