**GEOLOGICAL MAP
OF
DOWDELL PENINSULA
GREAT BEAR LAKE
NORTHWEST TERRITORIES**

SCALE 400 feet = 1 inch

LEGEND

- INTRUSIVE ROCKS**
- KEWEENAWAN**
- 16 Coarse, greenish grey quartz diabase; commonly
 - 15 Fine to coarse, brownish grey diabase; locally amygdaloidal
 - 14 Foliated trap dykes, with feldspar phenocrysts and calcite amygdaloids
 - 13 Dowdell Point granite and related apfites
- PRE-KEWEENAWAN**
- 12 "Quartz-eye" porphyry dykes, probably related to 11
 - 11 Granodiorite-diorite complex; generally coarser and darker than 10
 - 10 Quartz monzonite; local granitic facies
- PROTEROZOIC**
- 9 Apatite; some quartz monzonite porphyry; probably border facies of 10; related dykes
- CAMERON BAY GROUP**
- 8 Medium-grained andesite porphyry; probably flows
 - 7 Fine to coarse conglomerate, with ferruginous matrix; some calcareous and argillite
- UPPER ECHO BAY SUBGROUP**
- 6 Massive and stratified tuff and breccia; some banded argillite and conglomerate separate many of the andesite flows (5)
 - 5A, 5B Mostly coarsely porphyritic andesites, representing lower parts of andesite flows; 5A, amygdaloidal andesites; some flow breccia; representing upper parts of andesite flows 5A; include some conglomerate with andesite fragments
 - 4 Dark, altered, fine-grained intrusive porphyries
- LOWER ECHO BAY SUBGROUP**
- 3 Tuff, dark tuffaceous sedimentary rocks; some breccia and conglomerate
 - 2 Fine to medium-grained porphyritic flows, including amygdaloidal parts
 - 1 Cherty banded argillites, (3) chert, quartzite; minor conglomerates; thin silt beds (L3) near base of exposed section
- Quartz veins, stockworks ——— □
- Gossan ——— □
- Bedding (inclined, vertical) ——— □
- Faults ——— vvv
- Shear, possible faulting, in granodiorite ——— |||||
- Schistosity ——— >>>
- Geological boundary ——— - - - - -
- Drift boundary ——— - - - - -
- Glacial strike ——— - - - - -
- Test pit, shaft, adit, building ——— □
- Pitchblende occurrence ——— U
