GEOLOGY
SHERRIDON AREA
MANITOBA
SCALE 1:25 000

LEGEND

- 12 Pegmatite
- 11 Granodiorite
- 10 Pyroxenite
- 9 Gabbro
- SHERRIDON GROUP**
- 8 Massive amphibolite (metamorphosed flows)
- 7 Layered amphibolite with fragments (f) (metamorphosed volcaniclastic rock)
- 6 Impure marble and calc-silicate rocks
- 5 Calc-silicate rocks
- *** Cordierite-anthophyllite rocks
- 4 Pelitic schist
- 3 Biotite-garnet schist
- 2 Quartz-rich gneisses
- NOKOMIS GROUP**
- 1 Quartzofeldspathic gneisses (1a), migmatites (1b), and granitoid gneisses (1c)

- Geological boundary (approximate, assumed) - - - - -
- Foliation (inclined, vertical) - - - - -
- Lineation (inclined) - - - - -
- Fault (defined) - - - - -
- Sulphide orebody - - - - -
- Sulphide mineralization x S
- Stratigraphic horizon locally mineralized

Geology by E. Froese and P.A. Goetz, 1975-1976.
