SUDBURY TIMMINS ALGOMA MINERAL PROGRAM

PROJECT 1

MINERAL INVENTORY OF THE SUDBURY-TIMMINS- SAULT STE. MARIE REGION, ONTARIO

D.G. Rose

1985

\$20.00

SUDBURY, TIMMINS, ALGOMA MINERALS PROGRAM (STAMP)

The Sudbury, Timmins, Algoma Minerals Program was announced in Sudbury September 17, 1983, with the objective of stimulating mineral exploration and economic development in the region. It was initiated by the Department of Energy, Mines and Resources and supported by Employment and Immigration Canada. The program was designed and implemented by the Geological Survey of Canada in collaboration with Mineral Policy Sector. The individual projects were managed by the Department of Geology, Laurentian University, Sudbury, under the Chairman, Dr. A.E. Beswick. Field operations began in early October and continued into December. Following an eight-week extension, the Program terminated on May 25, 1984.

The Program comprised four projects with the following objectives:

Project 1 - Mineral Data Base (CANMINDEX)

- to collect, code and enter basic information on mineral occurrences in north-central Ontario into the Geological Survey of Canada data bank (CANMINDEX file); to provide information on these occurrences to the Ontario Geological Survey in their file format, and update information for the EMR (Mineral Policy Sector) National Mineral Inventory System; and to compile available rock geochemical data.

Project 2 - Swayze Belt Overburden Geochemistry

- to identify target areas for mineral exploration by geochemical sampling and analyses of overburden materials (eskers) in the Chapleau-Foyleyet-Gogama area.

Project 3 - Huronian Supergroup Geochemistry

- to define target areas with anomalous metal concentrations in Huronian sedimentary rocks in the Sault Ste. Marie-Sudbury region.

Project 4 - Rock Chemical Mineral Exploration Criteria

- 4A: to identify lithogeochemical criteria useful for mineral exploration in the Onaping Formation of the Sudbury Basin.
- 4B: to determine variations in rock geochemistry of major units of the Temagami Greenstone Belt and their relationships with mineralization.

The numbers and titles of the Geological Survey of Canada Open Files reporting results of these projects are listed on the back cover of this report. A description of the STAMP program, which includes overall co-ordination and administrative support, was published in Current Research, Part A, GSC Paper 85-1A, pages 723-725.

ACKNOWLEDGEMENTS

D. Rose acted as overall project leader and chief editor in the field, while D. Garson was responsible for final editing, computer operations and preparation for publication in Ottawa.

For their support and dedication, the editor wishes to thank the individuals who acted as supervisors and primary editors: Karl Jansons and Craig McConnell in Sudbury, Barbara Maine and Tracy Hope in Timmins and Brian Stagg in Sault Ste. Marie. Dave Garson of the Geological Survey of Canada, Andy Sozanski and Valerie Fell of the E.M.R.'s National Mineral Inventory Group, Hank Groen and Grant Troop of the Ontario Geological Survey all provided the project with copies of existing mineral occurrences data from the various files they manage.

The editor acknowledges with gratitude the invaluable assistance given by members of the Ontario Ministry of Natural Resources. For providing advice, space in which to work and free access to their voluminous files, I am indebted especially to P. Giblin and V. Miller in Sudbury, W. Mackasey and L. Luhta in Timmins and G. Bennett in Sault Ste. Marie.

Computer processing of the data was handled by Karl Jansons and Helga Humphries at Laurentian University and Dave Garson and Jennifer Shaw at the GSC in Ottawa. Many thanks to Verna Matson for her help in organizing, proofreading and keypunching much of the data during the six months after the project officially ended.

Finally, I wish to make particular mention of the contribution made by Maria Bozzo, employment officer with the Canada Employment and Immigration Commission in Sudbury. Her competence, coupled with unfailing good humour and patience under very trying conditions, ensured that the project could move forward in the critical early weeks.

OBJECTIVE

To compile data on mineral deposits and occurrences in the Sudbury-Timmins-Algoma area and in the process, update the files of Energy, Mines and Resources (EMR) and the Ontario Geological Survey (OGS).

CANMINDEX

CANMINDEX is a system for making available to the geologists of the Geological Survey of Canada, a reliable, uniform format, permanent, on-going index-level file on mineral occurrences to which could be attached specialized information relating to any given scientific project (i.e. radiometric age data, geochemical data, etc.). Operational since 1975, data acquisition has been based on project requirements of the Economic Geology and Mineralogy Division. The reader is referred to GSC Paper 78-8 for further explanation.

METHODS

Data was collected by coders stationed at the Ontario Geological Survey's Resident Geologist's offices in Timmins, Sault Ste. Marie and Sudbury. A total of 29 people were employed between October 1983 and May 1984. The inventory covered approximately 1300 townships in the Resident Geologist areas for Sudbury, Timmins (to 50° north latitude) and Sault Ste. Marie as shown in Figure 1.

At each centre a team of coders collated and encoded the available mineral occurrences information. Each team had one or more "editors" who ensured that coding procedures were complete and consistent. As the first step in the project, existing mineral inventory data (computerized and manual) for the area were gathered from Ontario Geological Survey, Geological Survey of Canada and Mineral Policy Sector (EMR). Using data available in the Ontario Ministry of Natural Resources' (OMNR) assessment files as well as OGS and GSC publications, the information on existing records was updated and new records were added.

1113 existing CANMINDEX records were updated and 1147 records were added to the file during the course of the project. The majority of the existing CANMINDEX records for this area were compiled as part of a project by W.N. Pearson and J.J. Carrière - Copper Metallogeny of the North Shore of Lake Huron (in press as GSC Paper 83-28). The new records were entered onto diskettes using using DBASE II on APPLE IIE microcomputers and then transferred to EMR'S mainframe computer in Ottawa where CANMINDEX is maintained. During the twelve months following the official termination of the project, updates to existing CANMINDEX records were merged, the entire dataset was examined for consistency and the data were prepared for publication.

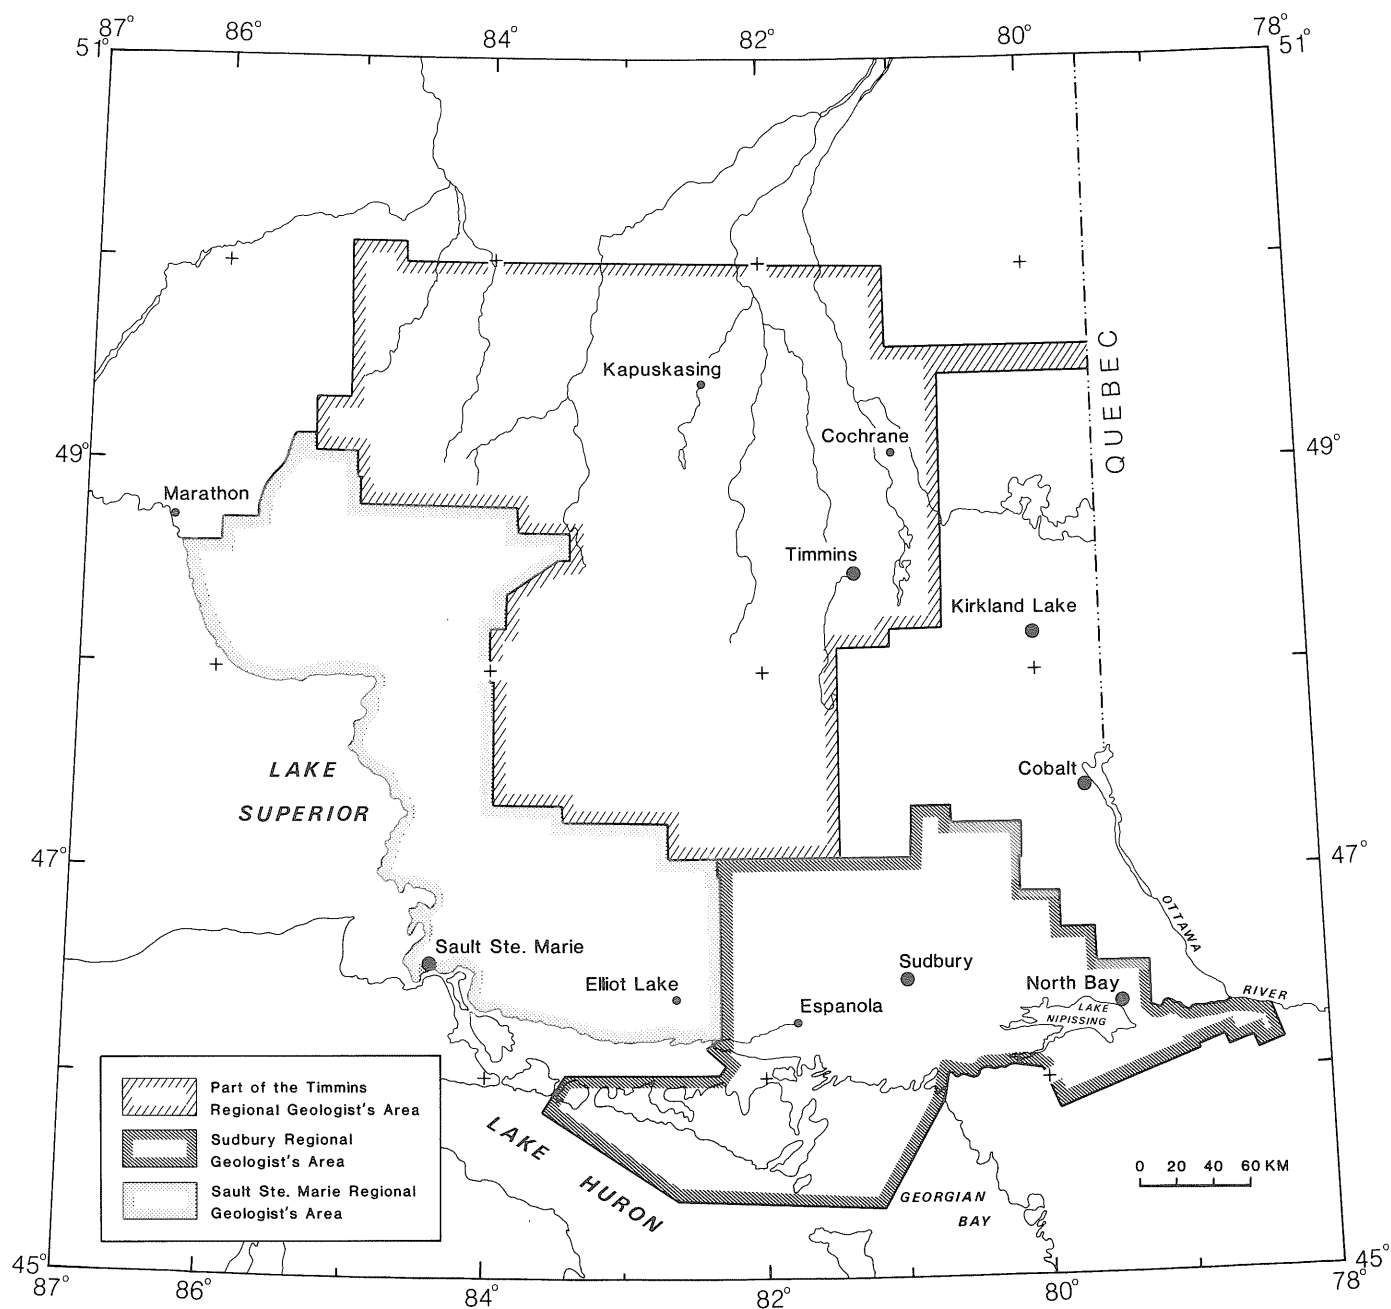

OMNR assessment files were frequently the chief source of information, especially for smaller occurrences. Thus, to the extent that the data in the assessment files may be misleading, incomplete or inaccurate, our data will probably be likewise.

The user should consider the "ENTITY CODED & SOURCE" field. The "SOURCE" indicates both the object located and the source of the location. Obviously the precision of the location of a drill hole taken from a large scale map is bound to be greater than that of a property symbol taken from a diagram. An imprecise location may also be indicated by blanks in the SECONDS column of the LATITUDE and/or LONGITUDE fields, or by the comment "approximate location" in the REMARKS field. The file also contains two codes to indicate how the occurrence was located, and the scale of the map used. These codes give a further measure of precision of location and are available on the magnetic tape version of the file.

Only one township is indicated (the one in which the located point falls) even if the mineralized area straddles a township boundary.

The significant role of microcomputers in this project cannot be overstated. Using DBASE II on APPLE IIE computers in the project centers, the teams were able to perform extensive editing and validation of the data during data entry and also numerous searches and trap retrievals using a customized

Figure 1. - area covered by STAMP Project 1.

DBASE II menu system. RBASE 4000 data base management system on IBM PC and VICTOR 9000 microcomputers was used at the GSC in Ottawa to process updates and perform validation checks and trap retrievals. The cost of such editing on a mainframe computer would have been prohibitive. Perhaps more importantly (in the long run), several individuals involved with the project who had previously shied away from the mysteries of mainframe computing, found the microcomputers easy to deal with and quickly adopted the machines as new tools.

MAPS

The fourteen accompanying 1:250,000 scale map sheets show the locations of all the mineral occurrences for this inventory overlain on a modified topographic base. Location maps show the portion of each sheet covered, which in many cases is not the entire sheet. For example, although Temagami Mine falls in NTS 41I/16, it is not shown since it also falls outside of the area covered by the project (i.e. it lies in the Cobalt Regional Geologist's area). Although parts of NTS 31E, 41G and 32E were covered by the project, no mineral occurrences were found to be documented for those areas. Also, only one occurrence was noted in NTS 41H and it lies exactly on the border between that sheet and NTS 41I. For convenience it has been shown on the NTS 41I map.

The identifying number beside a symbol will appear to the east of the point (at 3 o'clock), but in crowded situations the numbers have been moved for clarification.

The legend explains the significance of the different symbols used. Where the first commodity status is 1, 2, 3, 4 or 8, a square is used; for 5 or 6, a triangle is used and for 7, a cross is used.

FILE APPLICATIONS

Although this inventory contains only index-level information on the mineral occurrences of the area, it is suggested that it can be used in a variety of useful ways. At the very least it illustrates the number and distribution of occurrences which might be used to "target" areas for exploration. Correlation of specific geologic units or structures with the mineral occurrences may reveal interesting trends. The data can easily be plotted and replotted to fit any base map. Commodity associations can be investigated. The file also acts as an index to deeper-level sources of information on each deposit.

APPENDIX 1

EXPLANATION OF DATA FORMATS FOR DEPOSIT LISTINGS AND COMPUTER TAPE

Format of deposit listing

A full report of each record for the mines and major deposits in the Sudbury-Timmins-Algoma area is included (Appendix V). These deposits have at least one commodity which is being produced or has been produced or for which reserves have been measured. Hard copy of the full report containing not only the major deposits but also prospects and occurrences is available (Appendix VI), at user's expense, only from the K.G. Campbell Corporation, Reproduction Department, 880 Wellington Street, Bay 240, Ottawa, Ontario, K1R 6K7 (telephone (613) 225-3301, Ext. 250). The format of both reports is as follows:

```
-----  
NTS250 - Deposit No.  
Name (Alternate Name(s))  
Commodity (status)  
NTS Latitude Longitude Geographic Subdivision  
Entity Coded & Source  
Geological Province  
Deposit Type  
Geology  
Remarks (not always present)  
CANMINDEX Number    NMI Number    OGS Number  
Map(s)
```

References

Index Listings

Two index listings are included for the user's benefit. In both lists, the unique deposit number (NTS secondary sheet number plus deposit number) is indicated, allowing the user to quickly locate the deposit on the maps or in the report. An asterisk signifies that the name listed is the alternate name. Therefore, if both a primary name and alternate name are recorded for an occurrence, the record will appear twice in the index.

Format of Computer Tape Version

A computer tape of the data (also listed as GSC OPEN FILE 1087) is available and can be obtained, at user's expense, only from: Director, Computer Science Centre, Department of Energy, Mines and Resources, Ottawa, K1A 0E4. Included with the tape is a detailed description of the format of the data.

APPENDIX 1 - EXPLANATION OF DATA FORMATS (CONT'D)

EXPLANATION OF DATA ITEMS (Modified after Picklyk et al., 1978)

NTS - Deposit No.

The National Topographic System secondary quadrangle (1:250,000 sheet) in which the deposit is located plus a number which was assigned to the record after the deposits were sorted by Name within the NTS secondary quadrangle.

Commodity (status)

Each commodity is classified separately according to the following scheme:

1. Being Produced - Commodity is being extracted for sale.
2. Reserves, never produced - The commodity has not been produced although there are known reserves or demonstrated resources.
3. Reserves, was produced - The commodity is no longer produced although there are known reserves or demonstrated resources.
4. Exhausted - The commodity is no longer produced and there are no known reserves or demonstrated resources.
5. Grade, two dimensions - Two dimensional data (e.g. length and width) and grade of the commodity are available, but not enough to calculate reserves.
6. Grade, one dimension - One dimensional data and grade (e.g. 1 drill hole).
7. Present - Commodity reported, but insufficient data are available to allow the status to be classified.
8. The commodity occurs at a producing mine or in a significant deposit, but it is not known whether it is being or will be extracted for sale.

NTS

National Topographic System - designated as follows: primary quadrangle 1:1,000,000 sheet (number)/1:250,000 sheet (letter)/1:50,000 sheet (number) e.g. 105/D/10.

Geographic Subdivision

The township name or district or island in which the located point falls.

Entity Coded

Codes are as follows:

- S Simple - A single body of mineralization.
- C Compound - More than one body of mineralization for which the information cannot or need not be separated to refer to the individual deposits and the whole is entered as one record. In this case, explanatory comments are in the REMARKS field, e.g. 2 quartz veins 400 feet apart.
- P Partial - A part of a single mineral deposit where the total deposit is under two or more different managements or jurisdictions. The data cannot be reasonably combined.

The reason for this entry lies in the difficulty in rigidly applying any definition of a mineral deposit so that each entry (CANMINDEX record) corresponds exactly with a mineral deposit. Ideally there would be this correspondence and each record would be coded S. If neither of the other conditions (codes C or P) apply to the data available, all occurrences are coded S.

How Located (on computer tape only)

A code to indicate how the point whose location is given below (under Lat-Long) was decided upon. The codes are as follows:

APPENDIX 1 - EXPLANATION OF DATA FORMATS (CONT'D)

V = if point has been verified or plotted on a map of 1:250 000 or better by someone with first hand information on the deposit

P = a clearly defined point (dot or cross) on map showing lat & long (e.g. published map).

M = well defined point on a map, diagram in a trade publication, etc. which does not show lat & long. Transfer of point to another map is necessary to determine lat & long.

S = an area or poorly defined point on map showing lat & long; e.g. for a claim group the centroid is taken.

A = an area (e.g. claim group, drilled area, group of showings) on a map, diagram etc., which does not show lat & long. Centroid is taken and transfer is required.

G = position deduced from written or verbal description.

O = other. Includes lat & long taken from other documents without checking or replotting by the coder, or mean of two or more locations none of which can be identified as the best.

Map Scale (on computer tape only)

A code to indicate the scale of the map from which the location is measured, i.e. the scale of a geology map showing lat/long. or the scale of the topo. map used when transferring of the point is necessary.

Note: This field is coded only when a location is measured by the coder, i.e. when a code other than "O" is used in the "HOW LOCATED" field.

Codes are as follows:

A ≤ 1:12,000	G > 150,000 ≤ 200,000
B > 12,000 ≤ 25,000	H > 200,000 ≤ 250,000
C > 25,000 ≤ 50,000	I > 250,000 ≤ 300,000
D > 50,000 ≤ 100,000	J > 300,000 ≤ 500,000
E > 100,000 ≤ 125,000	K > 500,000
F > 125,000 ≤ 150,000	

Source

The object or point located and the source document are recorded in this field e.g. Shaft/NMI, Trench/GSC Map 1341A.

If the object located is unknown, only the source document is recorded.

Geological Province

This data was obtained from the National Atlas of Canada Map "Geological Provinces" by R.J.W. Douglas 1973. It occurs as a two-digit code on the computer tape, but has been expanded for the listings. The relevant codes for this area are:

GR - Grenville Province	SP - St. Lawrence Platform
SO - Southern Province	SU - Superior Province

CANMINDEX deposit type

On the computer tape, a two-digit code is used to represent the CANMINDEX deposit type while on the listings, short terms are used. CANMINDEX classification is as follows:

01 - PLACER

Placer deposits.

i.e. - Klondike; Elliot Lake; Nataskwan, Que. (beach sands)

02 - LATERITE

Laterite and other residual deposits.

i.e. - Banks Island, B.C. (Ti, V)

APPENDIX 1 - EXPLANATION OF DATA FORMATS (CONT'D)

03 - EVAPORITE

Evaporites (gypsum, anhydrite, halite, etc.).

i.e. - Sask. Potash; Windsor Gypsum

04 - CONCORDANT IN VOLCANIC ROCKS

More or less concordant deposits in volcanic rocks (includes discordant mineralization associated with conformable volcanogenic massive sulphides). Volcanogenic Cu-Zn deposits and Ni deposits in ultramafic flows will fall into this class.

i.e. - Kidd Creek; Millenbach; Brunswick No. 12; Western Mines;
Texmont; Dumbarton

05 - CONCORDANT IN SEDIMENTARY ROCKS

More or less concordant deposits in sedimentary rocks.

i.e. - South March, Ont.; Right's River, N.S.; Sullivan;
Silvermines; Redstone; Strathcona Sound

06 - VEIN/REPLACEMENT

Vein (-s; one or a few), faults, shear zones and replacements, exclusive of skarns.

i.e. - Copper Rand - Chibougamau; Falconbridge main mine; Gordon
Lake, Ont; Beaverlodge (U); Cluff Lake (U), Sask.; Churchill
Copper; Opemiska; Nigadoo; Bluebell; Keno Hill; Yellowknife;
Federal Zinc

07 - STOCKWORK/BRECCIA PIPE

Stockwork, veinswarm, breccia pipe (to include volcanogenic alteration pipes if conformable massive sulphide is absent or negligible). Most porphyry deposits will fall into this class.

i.e. - Bethlehem Copper; Granisle; Tribag; Louvem; Britannia Mine;
Wilmar (Cochénour) granodiorite orebody (Au)

08 - COLLAPSE BRECCIA

Collapse (solution) breccias and other breccias, mainly discordant, in carbonate rocks.

i.e. - Robb Lake

09 - SKARN

Skarn (Tactite deposits).

i.e. - Marmora, Ont; Craigmont; Gaspe Copper; Meat Cove; Cantung;
Phoenix (Greenwood)

10 - GREISEN

Greisen deposits. This class will mainly be used for tin, tungsten, and beryllium deposits.

11 - PEGMATITE

Pegmatite.

i.e. - Bernic Lake; Faraday; Mt. Copeland

12 - CONCORDANT IN INTRUSIVE ROCKS

More or less concordant deposits in intrusive rocks (i.e. concordant with internal layering and/or basal contacts).

i.e. - Creighton (contact zone); Raglan-Donaldson; Dumont; Bird
River Sill (Cr); Dore Lake complex (V, Ti)

APPENDIX 1 - EXPLANATION OF DATA FORMATS (CONT'D)

13 - CARBONATITE

Deposits in carbonatites and related alkalic complexes. This category is not intended to include porphyry deposits.

i.e. - St-Honore, Que. (Nb, REE)

14 - IRREGULAR IN INTRUSIVE ROCKS

Other deposits in igneous rocks. This category is not intended to include porphyry deposits, pegmatites or other deposits treated specifically elsewhere in this classification.

i.e. - Frood-Stobie Mines; Lynn Lake; Giant Mascot; Moss mine (Mo);
Lac Tio, Que.; Port Coldwell complex, Ont. (Cu); Podiform
chromites, Eastern Townships

15 - CONCORDANT IN METAMORPHIC ROCKS

More or less concordant deposits in metamorphic rocks (i.e. concordant with layering of whatever origin). Used only when the identity of the original rock has been obscured. That is, types 04, 05 etc., take precedence when the host is recognizable.

i.e. - Thompson Mine, Man; Ecstall, B.C.; Anglo-Rouyn, Sask; Minto,
Yukon; Glendower, Ont. (Fe)

16 - OTHER

Other (i.e. not in list above).

i.e. - Eastern Metals

17 - UNCLASSIFIED

Insufficient data to classify.

i.e. - Geneva Lake

Geology

Up to 50 characters are used to describe the morphology of the mineralization and the host rocks.

Remarks

Up to 70 characters are used for miscellaneous comments.

File Links

Respectively, the deposit identifier from the Geological Survey of Canada CANMINDEX file, the Mineral Policy Sector National Mineral Inventory (NMI) file and the Ontario Geological Survey Mineral Deposit Inventory Record (MDIR) file.

Map(s)

Geological, topographic and/or location (GEOL, TOPO, LOC) map references are given in abbreviated form. Geological maps showing the location of the occurrence are preferred and are listed first. The commonly used abbreviations are:

ODM - Ont. Dept. Mines
OGS - Ontario Geological Survey
OMNR - Ontario Ministry of Natural Resources
GSC - Geological Survey of Canada
ACR - Algoma Central Railway

In brackets following the map reference, is a single character code indicating whether or not the map shows the location of the deposit and also indicating which bibliographic reference the map is a part of. The codes are as follows:

1,2,3...7 - the map shows the occurrence location, and is found with document (reference) one, two or three, etc.

Y - map shows location, but is not found with any of the documents (references)

APPENDIX 1 - EXPLANATION OF DATA FORMATS (CONT'D)

N - map does not show the location

O - unknown if map shows location. It has not been examined.

Examples:

LOC P372 ODM (3) - ODM preliminary map 372 showing location, but not geology, and can be found with document (reference) number 3

GEOL 1334A GSC (N) - GSC A-series geological map showing geology of the area, but not the exact location of the occurrence

References

Up to seven references are listed in abbreviated form. Only the first author is given. In the listing, each full bibliographic reference is shown with the deposit. On the computer tape, however, the bibliography is a separate file of unique entries each identified by a 4-digit bibliographic number. The CONTENTS field describes the nature of information in the reference and is indicated by the following codes appearing at the end of the reference (not always present):

A** LOCATION

B REGIONAL GEOLOGY - a detailed account of the regional geology. Only the best and most recent are given if several references cover this field.

C** DEPOSIT GEOLOGY - detailed description of the geology of the deposit. The best are listed, but if other references contain additional details these have also been included.

D GEOCHEMISTRY, GEOPHYSICS - for references whose principal data are geochemical or geophysical.

E** HOST ROCK STUDIES - geological or geochemical studies of the host rock of the deposit.

F** MINERALOGY - mineralogical studies of the ore.

G PRODUCTION, RESERVES, ASSAYS, GRADES - numerical data concerning the deposit.

H SPECIALIZED STUDIES - i.e. petrological, metallurgical.

I GENERAL - other than above.

** if more than two fields of information are covered, priority is given to these codes.

Coded, Revised (on computer tape only)

Initials of the coder, year and month indicate when the data was encoded (and, if applicable, revised) and by whom.

PYROX.....	PYROXENITE	THOL	THOLEIITE
PYRR.....	PYRRHOTITE	TOUR	TOURMALINE
PYZD.....	PYRITIZED	TROND	TRONDHJEMITE
RHY.....	RHYOLITE	TUFACES	TUFFACEOUS
RHYO.....	RHYOLITE	TWP	TOWNSHIP
QTZ.....	QUARTZ	UG	UNDERGROUND
QTZ CARB VN.....	QUARTZ CARBONATE VEIN	ULTRMAF	ULTRAMAFIC
QTZ FELD PORPH.....	QUARTZ FELDSPAR	UNDRLN	UNDERLAIN
	PORPHYRY	UNDRLYG	UNDERLYING
QTZ PORPH.....	QUARTZ PORPHYRY	UPR	UPPER
QTZITE.....	QUARTZITE	URNIF	URANIFEROUS
RAD.....	RADIOACTIVE,	VERT	VERTICAL
	RADIOACTIVE MINERALS,	VN(S)	VEIN(S)
	RADIOACTIVES,	VND	VEINED
	RADIOACTIVITY	VNLT	VEINLETS
RADIOACT.....	RADIOACTIVE,	VOLC(S)	VOLCANIC ROCK(S)
	RADIOACTIVE MINERALS,	W	WITH
	RADIOACTIVES,	WACKE	GREYWACKE
	RADIOACTIVITY	W/N	WITHIN
REE.....	RARE EARTHS	WKLY	WEAKLY
REL TO.....	RELATED TO	X	CROSS
REPL.....	REPLACES, REPLACING,	XENO	XENOLITH
	REPL(S), REPLACEMT(S),	XTILLZD	CRYSTALLIZED
	REPLACEMENT(S)	XTLLINE	CRYSTALLINE
REXTLLZD.....	RECRYSTALLIZED	ZN	ZONE
RKS, RX.....	ROCKS	ZND	ZONED
SANDST.....	SANDSTONE		
SCATRD.....	SCATTERED		

APPENDIX II, PART 2 - ABBREVIATIONS USED FOR COMMODITIES

abrasive see: garnet, corundum, silica	
agate.....AGT	
aggregate, heavy see: stone	
aggregate, light see: perlite, pumice, vermiculite	
albertite see: bitumen	
aluminum.....AL	
alunite.....ALT	
amber.....AMB	
amethyst.....AMY	
andalusite.....AND	
anhydrite.....ANH see also: gypsum	
antimony.....SB	
apatite see: phosphate	
aquamarine.....AQM	
arsenic.....AS	
asbestos.....ASB	
barite, barium.....BA	
baryte see: barium	
bauxite.....BXT	
bentonite.....BNT	
beryl see: beryllium	
beryllium.....BE	
biotite see: mica	
bismuth.....BI	
bitumen.....BTM includes oil sands/shales	
boron.....B	
brucite see: magnesium	
building stone see: stone	
cadmium.....CD	
cesium.....CS	
calcite.....CCT	
chromite see: chromium	
chromium.....CR	
chrysotile see: asbestos	
clay/shale CLY includes ceramic clay and shale (other than stone use), except: kaolin, fuller's earth, bentonite, sepiolite	
coal COL	
cobalt CO	
columbium see: niobium	
copper CU	
cordierite CRD	
corundum COR	
crocidolite see: asbestos	
diatomaceous earth see: diatomite	
diatomite DTM used for: infusorial earth, tripolite, diatomaceous earth	
dimension stone see: stone	
diorite see: stone	
dolomite DOL except for building - or recovery of magnesium, then see: stone or magnesium	
epsom salt see: magnesium sulphate	
evaporite(s) see: anhydrite, gypsum, magnesium sulphate, potash, salt, sodium sulphate	
feldspar FLD	
fluorite FL	
fluorspar see: fluorite	
fuchsite FHS	
fuller's earth FLR	
gabbro see: stone	
gallium GA	
garnet GNT	
germanium GE	
glauber's salt see: sodium sulphate	
glauberite see: sodium sulphate	
gold AU	
granite see: stone	
granodiorite see: stone	

APPENDIX II, PART 2 - ABBREVIATIONS USED FOR COMMODITIES (CONT'D)

graphite.....GRP	molybdenite
gypsum.....GYP	see: molybdenum
see also: anhydrite	molybdenum MO
hafnium	monazite
include with rare earths	see: thorium, rare earths
halite	muscovite
see: salt	see: mica
helium.....HE	nepheline syenite NPS
ilmenite	nickel NI
see: titanium	niobium NB
indium.....IN	ochre OCH
infusorial earth	osmium
see: diatomite	see: platinum metals
iridium	palladium
see: platinum metals	see: platinum metals
iron.....FE	peat PEA
excluding iron sulphides	perlite PRL
iron ore	phlogopite
see: iron	see: mica
jade.....JAD	phosphate PHS
kaolin.....KOL	phosphate rock
kaolinite	see: phosphate
see: kaolin	phosphorite
kyanite.....KYN	see: phosphate
labradorite.....LAB	platinum
lead.....PB	see: platinum metals
lignite	platinum metals PTM
see: coal	the metals Pt, Pd, Rh, Ru, Os, Ir
limestone.....LST	polonium PO
except for building use,	potash POT
then see: stone	pumice PUM
lithium.....LI	pumicite
magnesite	see: pumice
see: magnesium	pyrite PY
magnesium.....MG	pyrophyllite
may include dolomite suitable for	see: talc
recovery of magnesium	quartz QRT
magnesium sulphate.....MGS	except for: silica, stone uses
used for: epsom salt	quartz crystals
manganese.....MN	see: quartz
marble	quartzite
see: stone, limestone	see: silica, stone
marcasite	radium RA
see: pyrite	rare earths REE
marl.....MRL	includes elements with atomic numbers
meerschaum	57-72, 21
see: sepiolite	rhodium RE
mercury.....HG	rhodium
mica.....MIC	see: platinum metals
used for: biotite, muscovite, phlogopite	rhyolite
	see: silica, stone

APPENDIX II, PART 2 - ABBREVIATIONS USED FOR COMMODITIES (CONT'D)

rubidium.....RB	talc TLC
ruthenium	tantalum TA
see: platinum metals	tellurium TE
rutile	thorium TH
see: titanium	tin SN
salt.....SLT	titanium TI
sand, silica.....SIA	topaz TPZ
see: silica	tourmaline TRM
sandstone	trap rock
see: silica, stone	see: stone
scandium	tripolite
included with rare earths	see: diatomite
serpentine	tungsten W
see: talc, stone	uranium U
semi-precious stones	vanadium V
see: agate, amber, amethyst, aquamarine,	vermiculite VER
beryllium, cordierite, corundum, garnet,	volcanic ash VOL
jade, labradorite, quartz (e.g. rose	yttrium YT
quartz, quartz crystals), topaz,	zeolites ZEO
tourmaline	zinc ZN
sepiolite.....SEP	zircon
selenium.....SE	see: zirconium
shale.....SHL	zirconium ZR
if not used as stone	
silica.....SIA	
includes rocks and minerals destined	
for siliceous flux, glass, and brick	
making, abrasives (SiO ₂)	
sillimanite.....SIL	
silver.....AG	
slate	
see: stone	
soapstone	
see: talc, stone	
sodium sulphate.....SDS	
used for: glauber's salt, glauberite	
sodium carbonate.....SDC	
spodumene	
see: lithium	
strontium.....SR	
stone.....STN	
includes rocks and minerals used for	
building, crushed stone, aggregate,	
ornaments, sculpturing, etc.	
stone, chips	
see: stone	
stone, dimension	
see: stone	
stone, ornamental	
see: stone	
sulphur.....S	
taconite	
see: iron
