The regional geochemical trend map displayed above utilized a moving weighted average using an inverse distance function ( $1/d^3$ ) to filter out minor irregularities and emphasize broad-scale regional features. Single point anomalies may be suppressed or eliminated, however, geological units which are chemically enriched, or large metallic deposits undergoing weathering would be expected to produce identifiable anomalies.

Undivided Glaciofluvial, Glaciolacustrine and morainal deposits: sand, silt, gravel and clay with local accumulations up to 70 m thick along valley bottoms: may include meltwater or outwash channel deposits, alluvium, varved silt, clay and sand, glacial till and ground moraine

Predominantly Rock: below 1,700 m elevation, discontinuous veneers of glacial till and ground moraine, and minor colluvium; valley bottoms may contain drumlinoid features, fluting, kame and esker complexes

Glaciers, permanent snowfields

Ice flow direction inferred from various data

Fluting, glacial striae

This map forms one of a series of maps released by the Geological Survey of Canada, Open Files 1214 to 1216. This Open File consists of maps of various geochemical variables: 18 for stream sediment, 3 for stream water and 1 sample site location

The west half of this Open File was previously released as Open File 1107 in 1985

#### GEOLOGY AND MINERAL DEPOSITS

Generalized geology after Geological Survey of Canada, Map 1356A to accompany Paper 72-35, *Geology of McBride Map Area*, British Columbia, by R. B. Campbell, E. W. Mountjoy, and F. G. Young; Geological Survey of Canada Map 1424A, *Pasip River, British Columbia*, 1:1 000 000, compilation by H. W. Tiger, R. B. Campbell, G. C. Taylor, and D. F. Stott, 1979, Figure 2, *Geological Map of the Cariboo River Area* accompanying British Columbia Ministry of Energy, Mines and Petroleum Resources Bulletin 47, *Geology of the Cariboo River Area*, by A. Sutherland Brown, 1983; and Geological Survey of Canada Open File 781, *Bedrock Geology of Barkerville-Cariboo Area*, by L. C. Strick, 1981, used to determine dominant catchment basin rock type for grouping of geochemical data.

\* The four-letter mnemonic name indicates rock type and the two-digit number indicates age.
