

#### SURFICIAL GEOLOGY

##### PROGLACIAL AND GLACIAL ENVIRONMENTS

- Glaciolacustrine Deposits:
  - Varved or massive clay and silt
  - Fine Sands, sands, and deltaic sand
- Glaciofluvial and Ice Contact Deposits:
  - Outwash sands and gravel
  - End moraine, interlobate moraine; sand, gravel and boulders
  - Esker or kame complex; sand, gravel, boulders
- Glacial Deposits:
  - Predominantly clayey till
  - Predominantly silty to sandy till
- NONGLACIAL ENVIRONMENT
  - Bedrock

Complexes: when two or more types of glacial or non-glacial environment are interspersed in a mosaic or repeating pattern, the relative dominant/subdominant amount of each type is indicated by sequential order. For example, 2/1 indicates predominantly silty to sandy till with lesser clayey till.

#### SYMBOLS

- Surficial geological boundary
  - Striae
  - Fluting, drumlin or drumlinoid ridge
  - Esker, kame or kame complex
- Surficial geology derived from:  
 Boissonneau, A.N. (1965), Map S465, Ontario Department of Lands, Forests.  
 Prest, V.K., Grant, D.R., and Rampton, V.N. (1969), Glacial Map of Canada, Geological Survey of Canada, Map 1253A (Scale: 1:5 000 000).

 Exploration Geochemistry Subdivision

#### CONTRACTORS

Sample collection by SIAL Geophysique Inc., Montreal  
 Sample preparation by Golder Associates, Ottawa

Sediment chemical analyses by Barringer Magenta Ltd., Rexdale, Ontario

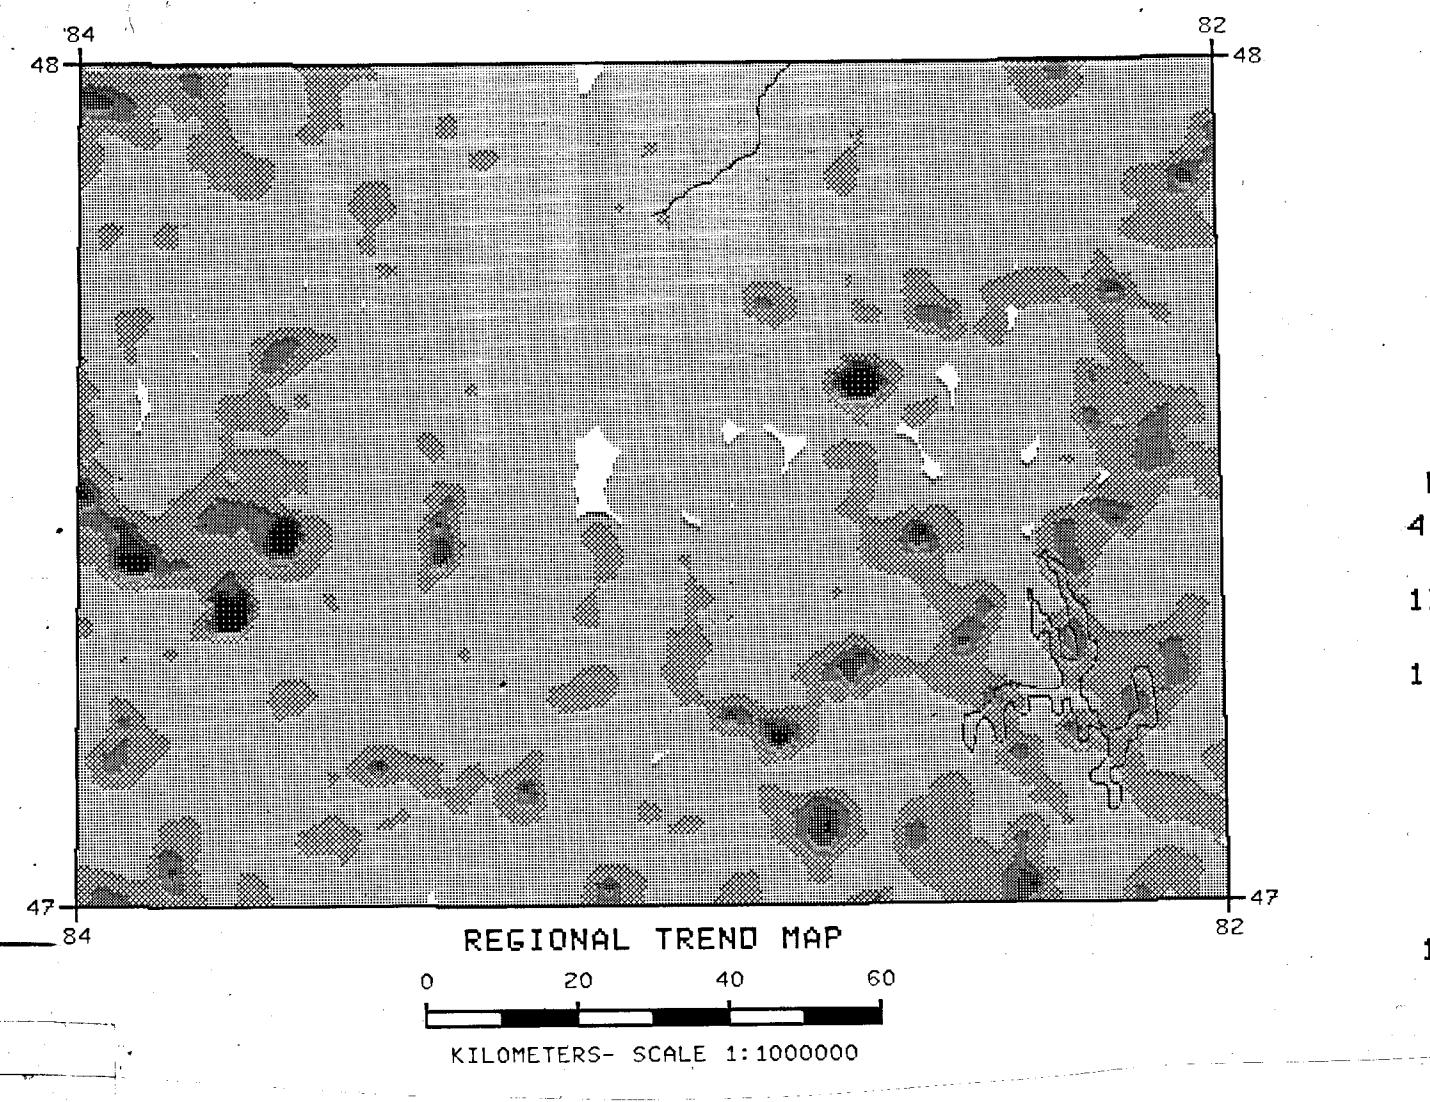

Au analyses by Chemex Labs Limited, Vancouver  
 Water chemical analyses by Barringer Magenta Laboratories (Alberta) Ltd., Calgary

Contribution to Canada - Ontario Mineral Development  
 Agreement 1986 - 1990, a subsidiary agreement under the  
 Economic and Regional Development Agreement, Project  
 funded by the Geological Survey of Canada.

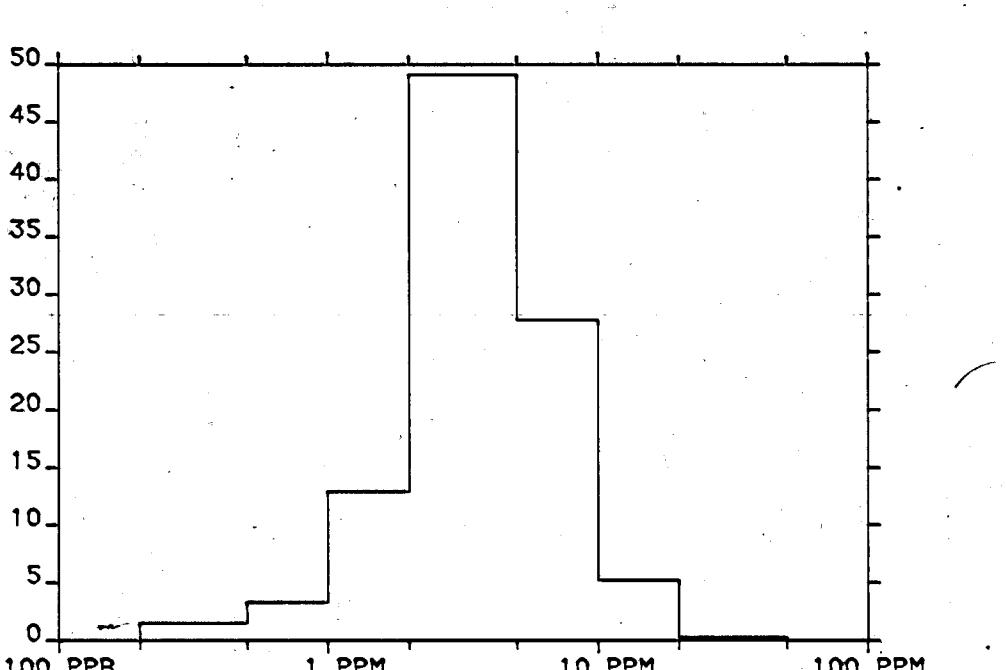

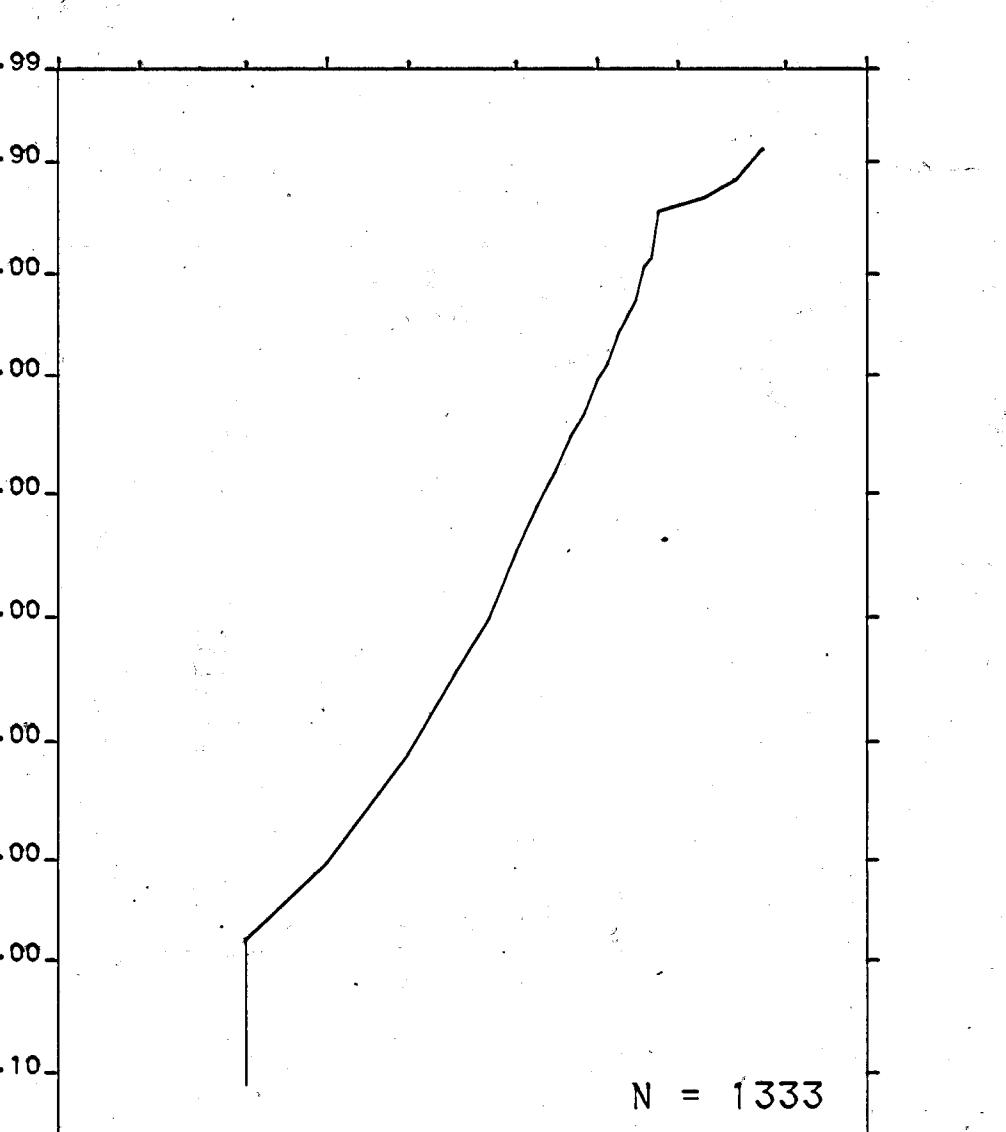

Energy, Mines and  
 Resources Canada

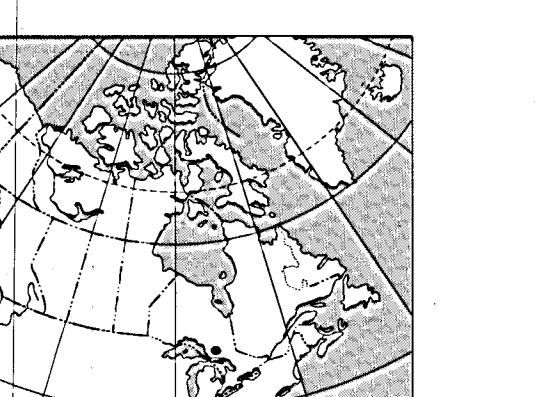

Canada

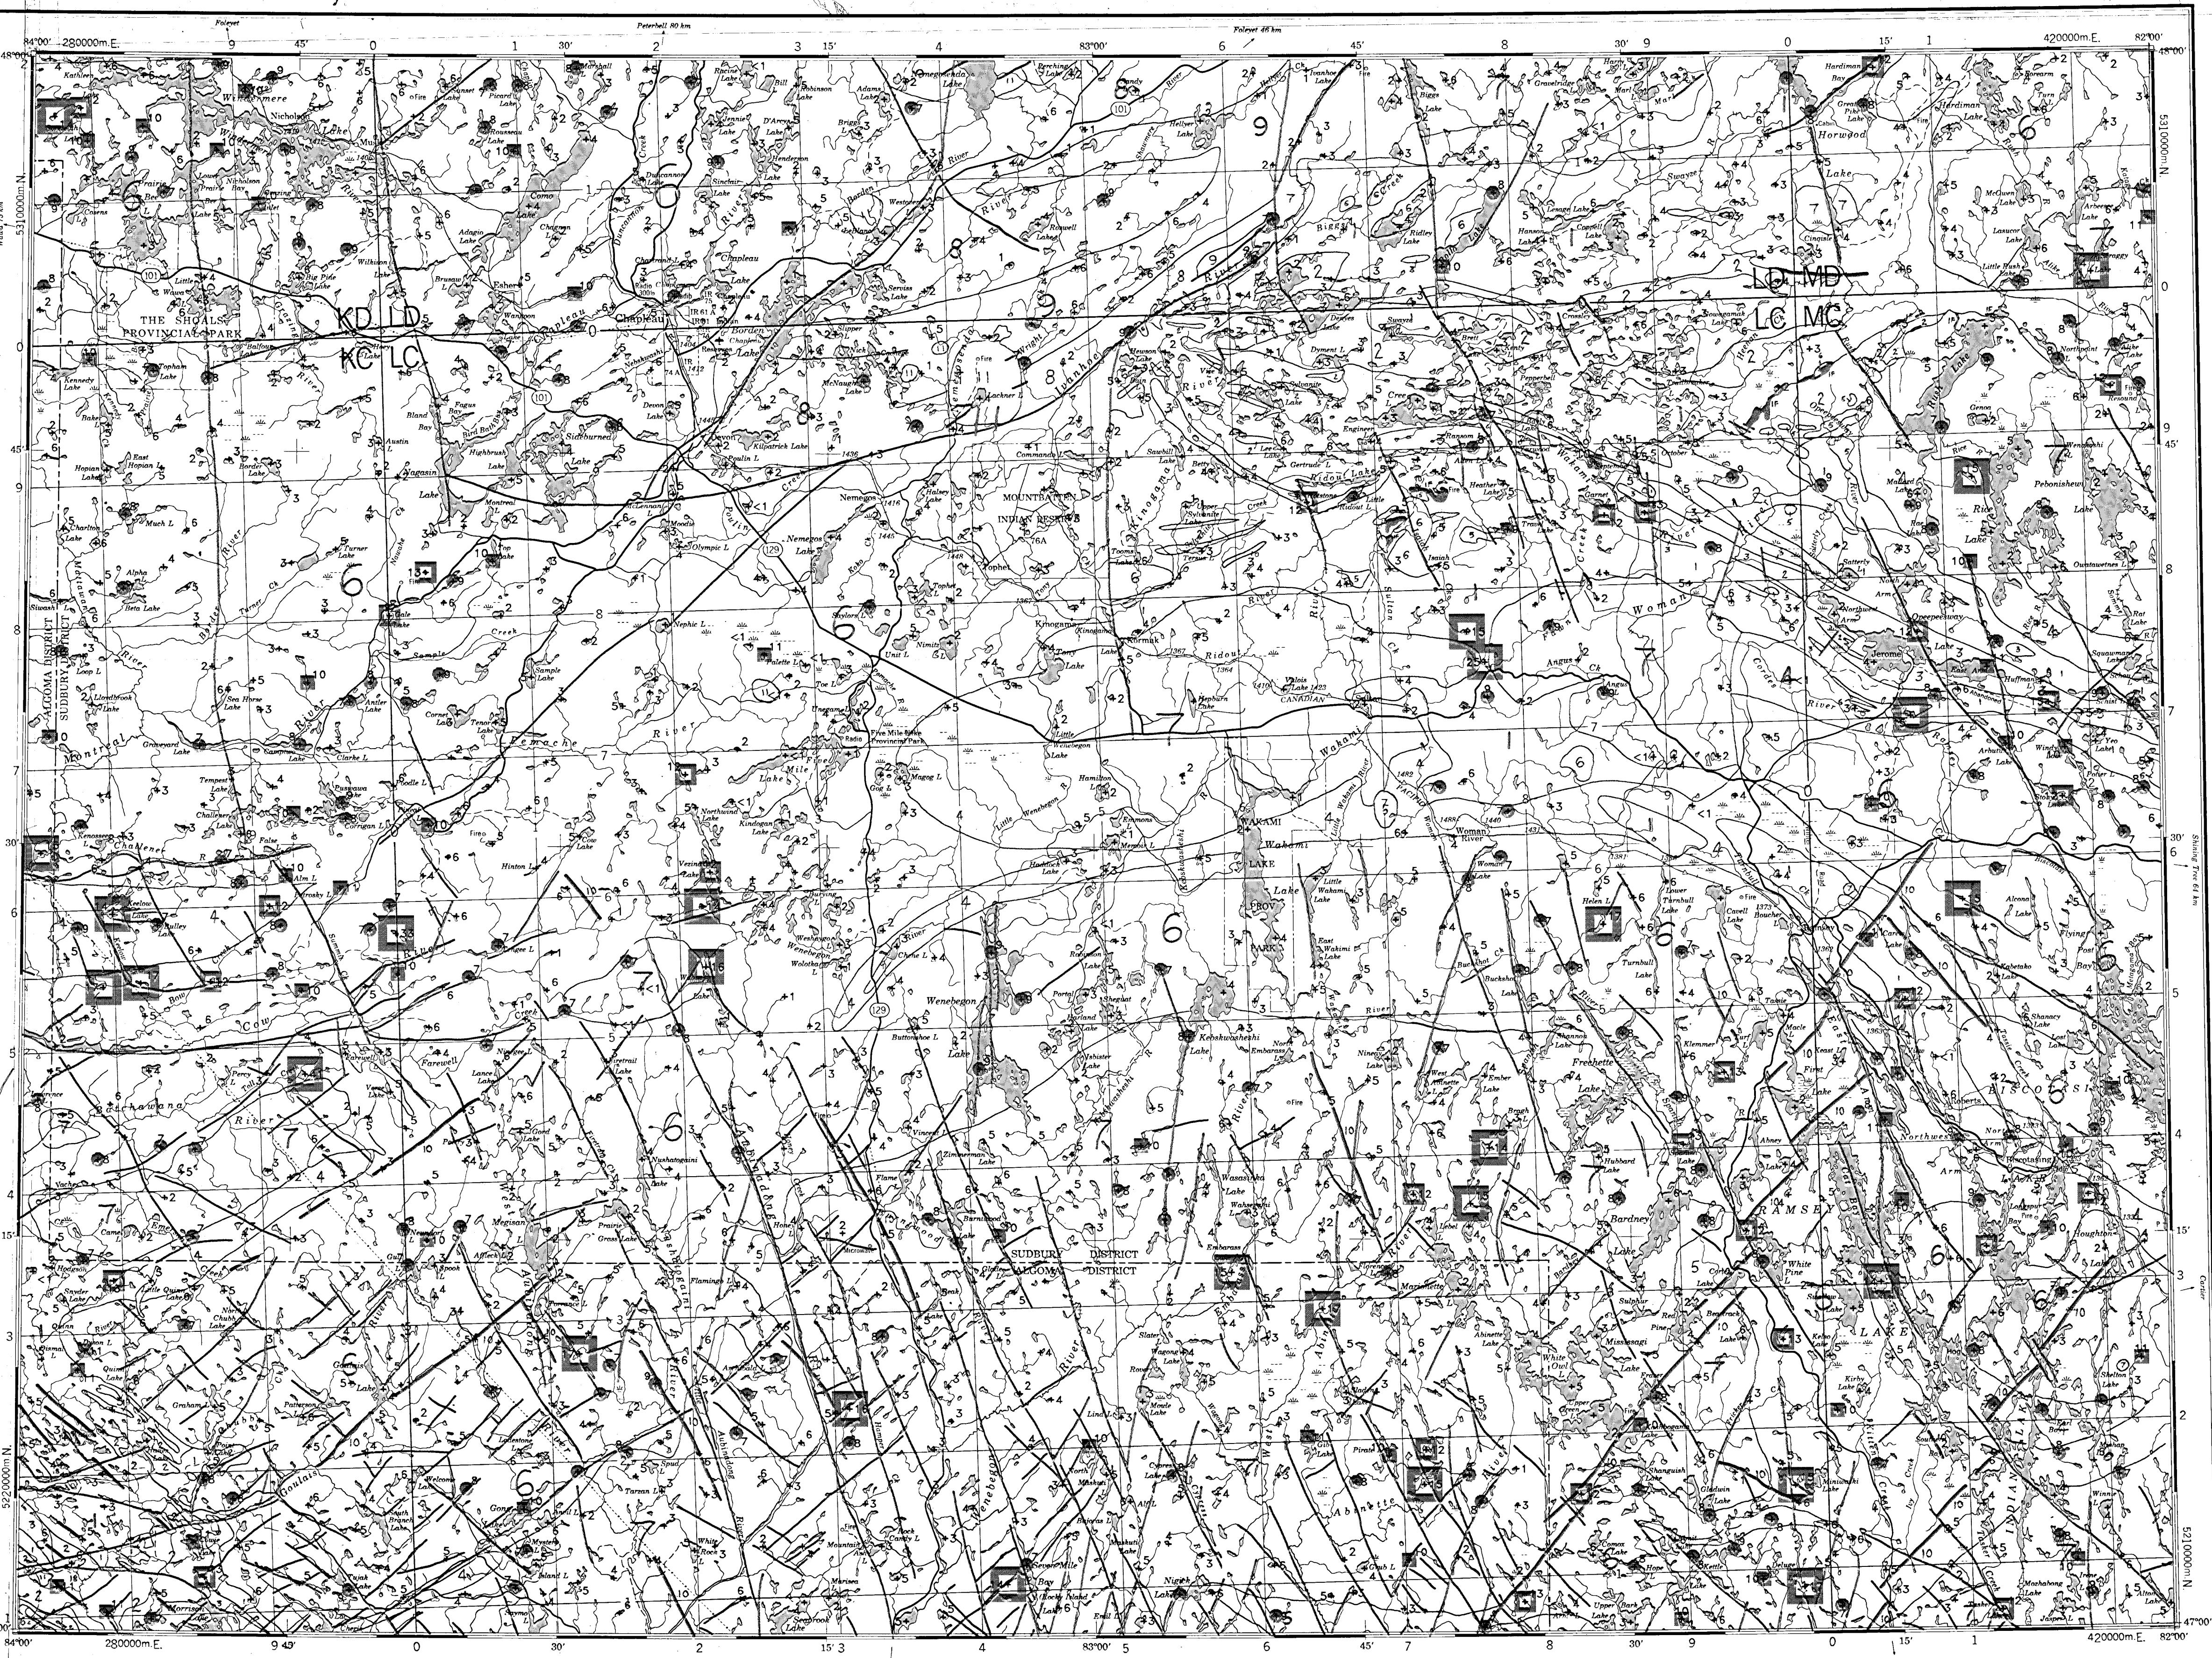

The regional geochemical trend map displayed above utilized a moving weighted average using an inverse distance function ( $1/d^2$ ) to filter out minor irregularities and emphasize broad-scale regional features. Single point anomalies may be suppressed or eliminated, however, geological units which are chemically enriched, or large metallic deposits undergoing weathering would be expected to produce identifiable anomalies.

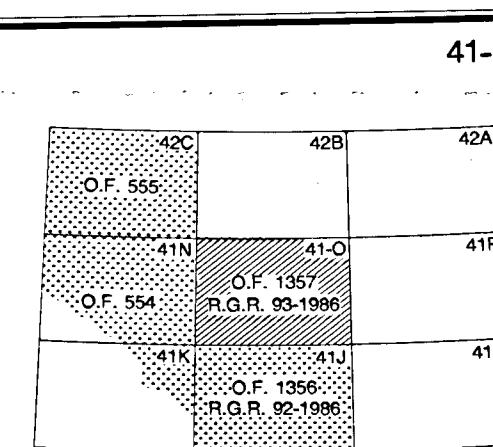

CONCENTRATION	FREQUENCY
14 to 41	N = 27( 2.0%)
12 to 13	N = 29( 2.2%)
10 to 11	N = 54( 4.1%)
7 to 9	N = 191(14.3%)
<1 to 6	N=1032(77.4%)

#### LEGEND

PRECAMBRIAN	
LATE PRECAMBRIAN	
11 LPAC*	Carbonatite - alkalic complexes; alkalic syenite, pulaskite, apatite and feldspared rocks, nepheline syenite, sovite, magnetite-apatite rock, urrite, zoisite, meteigtite
10 LPAD	Diabase dykes
EARLY PRECAMBRIAN (ARCHEAN)	
9 ASUB	Shawnee Anorthosite Complex; anorthosite to gabbro, Kapsukasing structural zone rocks; meta-igneous rocks, melanocratic granulite, pelitic and psammitic granulites, metasedimentary gneiss and arkosic metasediments
8 AKN	Massive felsic to intermediate plutonic rocks; granite, grandiorite, tonalite, quartz monzonite, monzodiorite, pegmatite
7 AGM	Foliated to gneissic felsic to intermediate plutonic rocks; granite, grandiorite, tonalite, quartz monzonite, diorite, migmatite
6 AGN	Mafic and ultramafic intrusive rocks, including gabbro, diorite and serpentinized ultramafics
5 AUB	Paragneiss, orthogneiss and migmatite
4 ASGN	Metasediments; greivacke, arkose, quartzite, conglomerate, argillaceous and migmatized metasediments, biotite-quartz-feldspar schist and gneiss
3 ACSP	Felsic to intermediate metavolcanics; rhyolite to dacite flows and fragmental, tuff, lapilli-tuff, agglomerate, breccia porphyritic flows
2 AMVF	Mafic to intermediate metavolcanics; basalt to andesite flows, porphyritic flows, and pillow lavas, mafic pyroclastics, layered amphibolite, diorite, gabbro, migmatized mafic metavolcanics
1 AMVB	IF Iron formation

\*A mnemonic code assigned to rock types and recorded as part of field observations.

Geological boundary.....  
 Fault.....  
 No analytical results.....\*

The geology base and legend for these geochemical maps were derived from: Geology Mapleaf - Foleyet, Map 223, Geological Conservation Series, Ontario Department of Lands, 1:253 400, McRank, G.F.D., Misura, J.D., and Brown, P.A. 1979, Geology - Plutonic Rocks in Ontario, Geological Survey of Canada Map 1533A, to accompany GSC Paper 80-23.

Copies of map material and listings of field observations, analytical data and methods, from which the open file was prepared, are available from:
