Plate 1. Line drawing summary of the reflection geometry observed on the Lithoprobe data (unmigrated). (a) Line drawings of the reflection events with the general geological boundaries shown at the top. (b) Generalized interpretation based upon correlations with surface features, industry seismic data, and other geophysical information. The patterns used are consistent with Figure 1. Solid lines are certain, dashed lines are probable, and dotted lines are only weakly controlled. Abbreviations used, in addition to those of Figure 1, are NBR = near-basement reflections, LRF = Lussier River fault, TF = Torrent fault, VR = Valhalla reflection.
