Abstract

Every available issue in private and public repositories of the Corner Brook, Newfoundland Western Star has been searched for historic seismic events and possibly related significant coastal flooding events from April 4, 1900 to June 15, 1964 when the seismograph was installed and began operating in St. John's, Newfoundland. The Western Star began as a weekly, became a semi-weekly in December, 1948, began to publish five weekdays a week in September, 1952 and then became a daily (except Sundays) in March of 1954. This study, of necessity, has produced the first systematic inventories of the locations of originals and microfilms, of microfilm gaps, of publishing frequency, of missing issues and the volume and issue numbering sequences for the Western Star. Only eight original issues are missing in the Bruce Stevenson Collection of about 2240 issues or 0.35% from April 4, 1900 to March 27, 1942. The overall interval searched had about 1% missing issues in the circa 5400 issues searched.

A total of 387 articles were extracted for the album of articles. About 83 storm, storm plus storm tide, or high tide events were identified as well as two seiche events on Lake Michigan; none of these 85 events are believed to represent a seismically-induced event except for a report of a previously-known tsunami from the known Good Friday Alaskan earthquake on March 27, 1964.

A total of 124 seismic events were extracted. Of this total, 27 of the events are Canadian or eastern U.S. earthquakes. Seven of the 27 seismic events were eastern U.S. events and one of these in New England may be a new, previously-unknown earthquake on September 7(?), 1926. A previously-unknown foreshock of the 1250 GMT, December 3, 1929 Attica, New York

earthquake may also have been defined, along with an eight-tremor, previously-unknown event "at New York" on December 3 (or 5), 1929.

Twelve of the 27 Canadian or eastern U.S. events are Canadian events, located outside Nova Scotia and Newfoundland. All these were previously-known. One of the articles on an event felt in the Hamilton-Toronto area greatly expands the felt area of the previously-known event at 0155 GMT on Tuesday, July 22, 1958. This event was known to have been felt in the St. Catherine's area but not in the Toronto area.

Two of the 27 Canadian or eastern U.S. events are Nova Scotian events. One of these identified only as a January, 1902 event is a new, previously-unknown event that will require more research to pin down. The other was a previously-known aftershock of the November 18, 1929 Laurentian Slope or "Grand Banks" earthquake.

Six of the 27 Canadian or eastern U.S. events were Newfoundland events and included a previously-undocumented felt report of the Charlevoix earthquake on February 28, 1925 at Lomand on Bonne Bay in western Newfoundland. A new, previously-unknown, late April to early May, 1916 event in the northern Notre Dame Bay area will require further research. This earthquake was reported by mail to the Western Star and was felt circa April 24 to circa May 1, 1916 at the light station on Gull Island, 11.4 km east of Cape St. John in northern Notre Dame Bay near the town of La Scie, Newfoundland. Some additional felt localities are documented for the previously-known February 2, 1969 event in the Gander - Grand Falls - southern Notre Dame Bay area of Newfoundland.

Résumé

On a vérifié tous les numéros du Western Star publié à Corner Brook (Terre-Neuve) et qui sont disponibles dans les archives privées et publiques, dans le but d'y trouver mention d'événements sismiques et d'inondations côtières importantes possiblement associées, qui se seraient produits entre le 4 avril 1900 et le 15 juin 1964, date où on a installé et mis en service le sismographe de St. John's (Terre-Neuve). Le Western Star a d'abord été publié une fois par semaine, puis deux fois en décembre 1948, puis cinq jours (sauf les fins de semaine) en septembre 1952, pour enfin devenir un journal quotidien (sauf les dimanches) en mars 1954. La présente étude a forcément permis de dresser le premier inventaire systématique de la localisations des originaux des tirages et des microfilms, des lacunes dans les microfilms, de la fréquence de publication, des numéros manquants et de la séquence de numérotation des numéros et volumes du Western Star. Il ne manque que huit numéros originaux à la collection Bruce Stevenson, qui compte environ 2 240 numéros, ou 0,35%, du 4 avril 1900 au 27 mars 1942. Il ne manquait qu'environ 1% des quelques 5 400 numéros examinés dans tout l'intervalle vérifié.

Au total, 387 articles ont été extraits pour compiler le recueil d'articles. Quatre-vingt-cinq événements ont été reconnus, dont 83 tempêtes, tempêtes plus raz-de-marée ou marées hautes et deux seiches sur le lac Michigan; aucun de ces 85 événements n'avait une origine sismique à l'exception d'un raz-de-marée auparavant connu produit par le séisme qui a eu lieu en Alaska le vendredi saint, 27 mars 1964.

Au total, 124 événements sismiques ont été reconnus. Vingt-sept d'entre eux se sont produits au Canada ou dans l'est des États-Unis. L'un d'eux, en Nouvelle-Angleterre, pourrait être un séisme auparavant inconnu qui se serait produit probablement le 7 septembre 1926. Il se peut qu'on ait reconnu un précurseur auparavant inconnu du séisme survenu à 1250 GMT le 3 décembre 1929, à Attica, dans l'État de New York, de même qu'un événement auparavant inconnu comportant huit secousses, qui a eu lieu "at New York" le 3 (ou 5) décembre 1929.

Douze des 27 événements survenus au Canada ou dans l'est des États-Unis sont d'origine Canadienne et se sont produits à l'extérieur de la Nouvelle-Écosse et de Terre-Neuve. Tous ces événements étaient déjà connus. Un des articles portant sur un événement ressenti dans la région de Hamilton-Toronto élargit considérablement la zone où on a ressenti le séisme déjà connu, qui s'est produit le mardi 22 juillet 1958, à 0155 GMT. On savait déjà que cet événement avait été ressenti à proximité de St. Catharines, mais non pas dans la région de Toronto.

Deux de ces 27 événements se sont produits en Nouvelle-Écosse. L'un d'eux, qui remonte à janvier 1902, était auparavant inconnu et devra être étudié davantage afin de le localiser. L'autre est une réplique déjà connue du séisme qui s'est produit le 18 novembre

1929 sur le talus Laurentien ou le "Grand Banks" tremblement de terre.

Six de ces 27 séismes ont eu lieu à Terre-Neuve, y compris une secousse auparavant non documentée qui a été ressentie à Lomond, près de Bonne-Bay, dans l'ouest de Terre-Neuve; elle est associée au séisme de Charlevoix du 28 février 1925. Il faudra aussi étudier plus en détail un autre événement auparavant inconnu qui s'est produit en 1916 (fin avril-début mai), dans le nord de la région de la baie Norte-Dame. Signalé par courrier au Western Star, ce séisme a été ressenti entre circa le 24 avril et circa le 1^{er} mai 1916 environ à la station de phare de l'île Gull, 11.4 km à l'est du Cap St-Jean, dans le nord de la baie Notre-Dame, près de la ville de La Scie, à Terre-Neuve. On a découvert d'autres endroits où on a ressenti le séisme connu de 2 février 1969, qui a eu lieu dans la région de Gander, Grand Falls et la partie sud de la baie Notre-Dame, à Terre-Neuve.

Introduction

Newfoundland and Labrador as the easternmost province of Canada lies on the Atlantic seaboard. The Island of Newfoundland protrudes well offshore to the east and represents Canada's most eastward extension. While seismicity is generally quite low in Newfoundland Canada's most tragic tsunamigenic earthquake occurred in the waters south of Newfoundland on November 18, 1929. This event of magnitude 7.2 spawned a tsunami that drowned 27 people in Newfoundland and one person in Cape Breton Island, Nova Scotia. These deaths are the first recorded Canadian losses to a tsunami or to an earthquake within Canadian territory.

Newfoundland remained as a colony of Great Britain until 1949 when it joined the confederation of Canada and became the tenth province on April 1st. Even though Memorial University of Newfoundland was formed shortly after confederation with Canada the Canadian government did not place a seismograph in Newfoundland for some 14 to 15 years.

The first seismograph was installed in Newfoundland in St. John's on the campus of Memorial University and apparently began operating in mid-1964; there are, however, reports of the seismograph's ongoing installation in local newspapers as early as July 4, 1963 with a September 1963 proposed completion (Appendix 4). It opened and began running consistently on June 1, 1964 at $47^{\circ} 34.3'N$, $52^{\circ} 44.0'W$, elevation 62 m (Station STJ). Three Willmore short-period instruments and three Columbia long-period instruments were installed (vertical; N-S and E-W horizontal) and these same instruments operated until March 31, 1989 when the station was closed apparently for budgetary considerations.

Introduction (continued)

A seismic station was opened about October 16, 1976 in Corner Brook (Station CBK) at $48^{\circ} 55.182'N$, $57^{\circ} 58.182'W$, elevation 380 m. This station has only a short-period vertical instrument and has operated somewhat sporadically recently.

Thus, Newfoundland had no instrumental data prior to June 1, 1964 and the best record of felt earthquakes in Newfoundland before June, 1964 will be found in the written record from sources such as community newspapers or possibly diaries, letters or even certain folklore sources. Newfoundland has never been densely populated and even today most communities are along the coast to facilitate the prosecution of the fishery. Furthermore Newfoundland has never had a large number of newspapers in its outport communities and by far and away the concentration of newspaper publishing was found in the colonial capital St. John's. Generally no other community on the island of Newfoundland has ever developed to the point that a daily newspaper could survive.

The exception to this was Corner Brook (previously known as Curling and prior to June 8, 1915 known as Birchy Cove) where the Western Star began on April 4, 1900. The Western Star began publishing with Vol. I, No. 1 on Wednesday, April 4, 1900 two days each week on Wednesday and Saturdays, then quickly switched to Tuesdays and Fridays on May 1, 1900. With the first issues of 1902, it became a weekly on Wednesdays, reverted to a Tuesday and Friday schedule on May 28, 1901 then back to a weekly on Wednesdays on January 1, 1902. This frequency was held until Friday, February 20, 1931 when a daily sequence and various other sequences were tried through to May 8, 1931 when the weekly schedule on Wednesdays was reverted to. It changed to a weekly on Fridays in the 1942-1946 period.

Introduction (continued)

On Tuesday, December 7, 1948 the Western Star began to publish semi-weekly on Tuesdays and Fridays. On Monday, September 15, 1952 the newspaper reset its volume and issue numbers to No. 1 and began to publish daily, except on Saturdays and Sundays (Vol. 1, No. 1). The issue number sequence became quite fouled up on December 4, 1953 when the sequence went, 308, 309, 3010, 3011, etc. and again on April 19, 1954 when it went from 3109 to 31010 and again on December 14, 1954 when the issue number went from 31209 to 312010. Three issues later, someone finally noticed and the volume number and issue number were reset to their proper spot and the sequences remained reasonable through to the end of our search on June 15, 1964. During the aberrant issue sequence, the Western Star became a daily (except Sundays) on Saturday, March 6, 1954 (Volume 2, No. 3074) (not January 2, 1954 as Ellison, 1988 indicates in Appendix 1). This daily publishing sequence persists to the present day. The Western Star remains as the only Newfoundland daily outside of the Evening Telegram in St. John's and is still one of the few independently-owned newspapers in Newfoundland.

Corner Brook is a regional centre at the head of the Bay of Islands and at the mouth of the Humber River. The newspaper generally served as a newspaper of record for the west coast of the Island of Newfoundland and was a source of news for much of the west coast and even parts of the isolated south coast and interior parts of the province. As such the Western Star is an excellent regional newspaper to search for events of importance to the historical seismicity of central and western Newfoundland.

Previous historic seismicity contracts by the Geological Survey of Canada have concentrated on sources in St. John's (Staveley et al., 1984;

Introduction (continued)

1986; 1988, in prep.; 1989, in prep.). This study is designed to take advantage of a source of original copies of the Western Star recently found in western Newfoundland and to provide a near-continuous sampling of the felt seismicity above magnitude 3 to 4 for much of western Newfoundland from April 1900 to the time of installation and commissioning of Newfoundland's first seismograph on about June 1, 1964.

This contract was subject to some press comment in the Ottawa Citizen of Friday, February 9, 1990 when an article by Dominique Lacasse noted "a \$4,000 - deal with another Halifax Company to review newspaper stories on earthquakes for Energy, Mines and Resources" (Appendix 2). The rather ill-informed article, apparently written only from the title of the Department of Supply and Services contract, caused some consternation within the Department of EMR at the officials' level. A Letter to the Editor was sent to set the record straight (Appendix 2) and eventually a highly-edited version was published in the Citizen on Thursday, March 1, 1990 (Appendix 2).

Locations and Holdings of the Western Star

If a mistake was made in this project, it was to not carefully inventory, in person, the holdings of microfilm of, and original copies of, the Western Star long before the project began and indeed before it was bid. Indexes in the local St. John's institutions and catalogues (Ellison, 1988; Appendix 1) are inadequate and often incomplete or in error and often persons in the institutions are unclear as to their holdings. Even as the project began in earnest, the need for a complete inventory was not impressed strongly enough upon the St. John's personnel involved and the requirement was let slide until the project was done (Table 1). In the case of

Locations and Holdings of the Western Star (continued)

the Public Archives of Newfoundland and Labrador (PANL) holdings, it was not realized until after the St. John's researchers were finished that PANL did indeed have some bound volumes and their own staff kindly provided the inventory in Table 3. The lack of a careful inventory lead to some confusion and a failure to copy a few articles from the original copies in Corner Brook when we had a person there on another matter.

The Provincial Reference and Resource Library (PRRL) in St. John's has been designated as the repository for original copies of Newfoundland newspapers. Much of the PANL collection of the Western Star originals has been transferred to PRRL (Table 2). However, PRRL's facilities for storage have quickly become quite overcrowded and some of the collection of the Western Star still remains at PANL (Table 3) though Calvin Best's letter of May 3, 1990 indicates that the rest of the collection of bound originals will go to PRRL shortly (Table 3). PRRL also has a small collection of wrapped bundles of individual papers, per Mr. Derek Bussey's letter of January 8, 1989[sic] - 1990 (Table 2).

However, neither PANL's or PRRL's collection of bound or unbound originals appear to go back before January, 1946. Through good fortune and a response to a Letter to the Editor placed in the Western Star in 1985 seeking information on a 1925 seismic event, we came to realize that a Mr. Bruce Stevenson of Corner Brook held a large and significant collection of the Western Star originals from the very first issue on April 4, 1900 (Vol. I, No. 1) through to March 27, 1942 (Volume 42, No. 52).

The Stevenson Collection is remarkable for its good condition and its completeness. Over the 42-year collection, only eight issues are known to be missing and only five issues are known to have a page missing or pages

Locations and Holdings of the Western Star (continued)

that are shredded and unuseable; only eight missing issues in about 2240 or 0.35%! Mr. Stevenson produced a complete inventory of his collection when we first established contact in 1985 and this is reproduced in full detail in Table 4. This inventory represents a great deal of time on Mr. Stevenson's part and his effort deserves to be recognised.

Much of the Western Star has been microfilmed and the inventory of available microfilm is found in Table 1 for PRRL, PANL, the Centre for Newfoundland Studies (CNS) at Memorial University of Newfoundland (MUN) and for the Corner Brook Public Library and National Library of Canada. Contact was made with the offices of the Western Star directly at (709) 634-4348 at Canadian Newspapers Co. Ltd. in Corner Brook and it was established that the Western Star has exactly the same microfilm gaps as all the other collections have; they hold no originals any longer. Similarly, the Corner Brook Public Library and the National Library in Ottawa microfilm collections reflect the same contents and the same gaps as the Newfoundland collections at PRRL and PANL.

The Centre for Newfoundland Studies holds only a microfilm collection from November 3, 1952 onwards (Table 1) and holds no originals. The Newspaper Archives of the British Library at Colindale Avenue in London, England hold no copies of the Western Star in either microfilm or as originals.

Thus, the microfilm inventories in Table 1 and the inventories of originals in Tables 2 and 3 represent the best, most detailed and most complete inventories of the publically-held collections of the Western Star. The inventory in Table 4 is the first made of the Stevenson Collection and represents the most complete record of the first 41 years'

Locations and Holdings of the Western Star (continued)

of publishing history of the Western Star, giving volume and issue numbers, missing or repeated issue numbers, muddled dates as well as publishing frequency. No such record in such detail is available for the period after March 27, 1942 except for the period searched by Ms. Katherine Hattie from May 16, 1947 to September 5, 1956 inclusive (Table 5).

Her search notes record the details of missing issues, missing pages, misnumbered issues, etc., etc. In this period of 9.30 years or about 1581 issues, there are only 24 missing issues and a further 21 issues with damaged or missing pages. Thus, only 1.52% of the interval is missing. The other two post-1942 intervals searched were found to have a similar completeness.

None of the inventories in this compilation generally go much past the June 15, 1964 date which was the cut-off of this search (15 days after the apparent June 1, 1964 commissioning of the St. John's seismograph). Note that a late chance discovery of a July 4, 1963 article in The Evening Telegram implies that the seismograph was, in fact, installed earlier than June 1, 1964 (Appendix 4). However, the collection of seismograms from the St. John's station only begins with the June 1, 1964 record. (John Adams, personal communication, winter, 1990).

Missing Issues

As noted above, only eight original issues are missing between the Western Star's inception on April 4, 1900 and March 27, 1942 in the Stevenson Collection. Original copies of the Western Star seem to be missing for Wednesday, April 3, 1942 through to the issue prior to Friday, January 4, 1946 (Volumes 43, 44, 45 and most of 46) as seen in Table 2.

Missing Issues (continued)

The 1942 to 1946 gap above may, in fact, not be missing since microfilms exist, however we did not locate these originals in St. John's.

Within the microfilm collection, there are more gaps and different gaps than those found in the originals. In the early years, there were at least two separate microfilming efforts and some years are only available from the PANL microfilm collection on negative microfilm (Table 1). This is further complicated by the fact that PANL will not loan these microfilms - not even to let them be copied locally at the Memorial University Library Copy Service and the copying machine at PANL is totally inadequate for the job in that it makes only highly reduced copies on a distasteful chemical-based paper. In most cases, we resorted to taking these reduced "chemical copies" where we had to use them and enlarging them on a standard xerox machine to make a large enough and dark enough copy that one can read and use in the Appendix 5 album of articles.

The two series of microfilming efforts shows up as well as overlaps in the PANL and PRRL microfilm collections of the Western Star (Table 1). The PANL microfilm collection stops on March 31, 1960 (Table 1). The PRRL microfilm collection is the more significant collection and we present a complete inventory in Table 1 (part 2). The CNS microfilm collection only begins on November 3, 1952 and runs to the present and exactly reflects the PRRL collection as does that held at the Corner Brook Public Library and at the Western Star itself. The Newspaper Archives of the British Library at Colindale Avenue in London, England hold no copies or microfilms of the Western Star.

Missing Issues (continued)

Despite the two basic overlapping microfilm collections, six microfilm gaps persist in both collections as seen below:

<u>Gap No.</u>	<u>Starting Date of Gap</u>	<u>Final Date of Gap</u>
1	Wed., Jan. 3, 1906	Wed., March 28, 1906
2	Wed., April 7, 1909	Wed., April 30, 1913
3	Wed., April 3, 1918	Wed., March 26, 1919
4	Wed., March 30, 1938	Wed., March 27, 1940
5	Wed., April 2, 1941	Fri., March 27, 1942
6	Thurs., Sept. 6, 1956	Wed., Sept. 4, 1957

None of these six microfilm gaps can be filled on microfilm at any institution. Two additional gaps in the microfilm at PRRL in 1924 and 1930 (Table 1) can be filled by using the negative microfilm at PANL (Table 1).

The first five of these microfilm gaps (above) are available in the Stevenson Collection in Corner Brook with copies being made on a local copier directly from the bound originals. For most of the project, we were resigned to not being able to search the sixth gap from Thursday, September 6, 1956 to Wednesday, September 4, 1957 inclusive. We had been told that this volume of originals was not available at PRRL or PANL. In preparing the final report, a handwritten index of PRRL holdings obtained on an August, 1989 visit was rediscovered at the bottom of the project file. It indicated that PRRL held original copies of the Western Star for September-December, 1956, January-April, 1957 and May-August, 1957. Daniel Boyce reapproached PRRL with a copy of the two index sheets and the missing three volumes were located down in the vault under PRRL. These volumes could not, however, be copied directly in accordance with PRRL policy. Thus, the twelve articles involved could not be reproduced without a month-long delay for a special microfilm to be made and these twelve are only included as a transcript of the headline in the album of articles (Appendix 5).

Missing Issues (continued)

Thus, in the end, for the whole search period from April 4, 1900 to June 16, 1964 we are only missing the eight issues missing in the Bruce Stevenson Collection (Table 4), the 24 issues missing in the period searched by Katharine Hattie (Table 5) and an unknown but similar number missing in the two periods searched by Daniel Boyce; this represents about 1% missing issues in circa 5400 issues searched.

It would be valuable for future researchers if the six major microfilm gaps above could be filled while the original copies of the Western Star for these periods still exist intact and can still be physically handled. We would also recommend that the twelve negative microfilms in the PRRL collection be replaced with positive microfilms again while the originals survive and that the P.A.N.L. collection of Western Star microfilms be duplicated where necessary to allow for interlibrary loans; P.A.N.L. will not loan any of its microfilms as a matter of policy.

Methodology

In the Fall of 1989, Alan Ruffman had occasion to be in St. John's and did a preliminary indexing of the Western Star at PRRL for purposes of preparing a proposal for the Department of Supply and Services and the Geological Survey of Canada. Geomarine Associates Ltd. had an ongoing contract during the Fall of 1989 documenting tsunamis in Newfoundland sources and Andrew Smith and Gavin Buchan worked on this project. During the Fall of 1989, Andrew Smith was in Corner Brook to search certain periods of the Corner Brook Western Star in the Bruce Stevenson Collection. At this time, Mr. Stevenson provided us with a full copy of the results of

Methodology (continued)

his search from April 4, 1990 up to the end of 1925. He had searched for items of local and genealogical interest and had noted all seismic, high tidal, major storm, and flooding events in addition.

During his visit to Corner Brook, Andrew Smith copied all articles defined in the 1900-1925 period which we knew to be in one of the known microfilm gaps in the PRRL or PANL microfilm collections in St. John's. This is where the failure to do a careful pre-project inventory caused problems in that, in late February, 1990, another, and a larger, microfilm gap was found in the St. John's microfilm collection. Dionne Snow, a student in Corner Brook, had to be called in to search the March 23, 1938 to April 4, 1938; the March 1, 1939 to April 3, 1940 and the April 2, 1941 to March 24, 1942 periods and to copy some missing articles available only on the originals.

It was assumed that the two students who had been hired to do the CHS tsunami project in the Fall of 1989 would carry on in the winter of 1990 to do the Western Star search. That assumption did not get realized as they encountered heavy course loads and burn out. By February 5, 1990 it was realized that no progress whatsoever had been made on the Western Star search and Daniel Boyce was contracted in St. John's with residual supervision by Gavin Buchan to get him started.

It became clear very quickly as the project finally began that one researcher in St. John's would not be enough, given the time constraints. A second researcher, Katherine Hattie, was added in Halifax and microfilms were borrowed from PRRL and the National Library through the Public Archives of Nova Scotia. PRRL had a policy of only loaning out six

Methodology (continued)

microfilms at a time. Even by returning these promptly in pairs and requesting more could not give us the turn around we needed. Ms. Hattie was on occasion left with no Western Star microfilms in Halifax (Table 5).

It took a near constant series of phone calls to PRRL to give them the faith to eventually get up to 12 microfilms in transit going and coming. Eventually, we broke faith and ordered several years from the National Library in Ottawa; they had no such restrictions on the numbers of microfilms that could be borrowed (PANL will let none of their microfilms out, which totally frustrates out-of-town research).

Daniel Boyce in St. John's borrowed the microfilms from PRRL and transported them to CNS and the MUN Library Copy Service where copies were made by xerox onto plain paper. Katherine Hattie used the PRRL microfilms at the Public Archives of Nova Scotia (PANL) and could make xerox copies onto plain paper herself on PANL's machine. She was the only person in the project able to exercise a direct hands-on-control of copy quality onto plain paper.

In St. John's, where Daniel Boyce had to make copies from the PANL negative microfilm he was forced to accept highly reduced, positive, "chemical copies"; no enlarging lenses seemed to be available. He then went to a MUN enlarging xerox copier and made enlarged darkened copies of the small rather pale "chemical copies" and generally we were able to get satisfactory copies to mount in the album found in Appendix 5.

Daniel Boyce checked his proposed copy lists initially with Gavin Buchan then directly with Alan Ruttman; the late night, somewhat cheaper rate telephone call or facsimile message became essential to the project.

Methodology (continued)

Danny Boyce regularly sent his annotated articles across to Halifax and Kathy Hattie made up the master album pages, clipped the articles and mounted them initially in her dry periods between available PRRL microfilms, then in the evenings and on the weekends as the work load mounted and the March 31, 1990 deadline approached.

All the searching of microfilms was just completed on March 31, 1990, but several inventories, various copying chores and quite a bit of clipping and mounting slid well across the March 31, 1990 deadline. The report was quite late. Final gaps that were realized in compilation or confusions in page and volume numbers had to be sorted out with the help of P.R.R.L. staff and this dragged on into June. Derek Bussey and Charles Cameron were essential in this regard at P.R.R.L. Derek Bussey also located, late in our search, a "partial index" to the Western Star (but mainly to the St. John's newspapers) which Ellison (1988) mentions; it provided two additional article references.

Articles Located

The album of 387 mounted articles in Appendix 5 represents the results of the search. These 387 articles are supplemented by three additional articles on the Sunday, February 2, 1969 southern Notre Dame Bay, Newfoundland earthquake forwarded by the Editor of The Pilot of Lewisporte, Newfoundland. Michael J. Ralph, the Editor, was aware of our tsunami and Western Star search and forwarded these articles reporting new felt locations for the 1969 event. The three articles are included here in Appendix 3 for want of a better place and to ensure that these data are not lost to the G.S.C. A single, early article on the installation of the Memorial

Articles Located (continued)

University seismograph was located in The Evening Telegram of Thursday, July 4, 1963 via the "partial index" cited by Ellison, (1988); (Appendix 1). This article found late in the project is found in Appendix 4.

Only articles on seismic events, tsunamis, seiches, high tidal, flooding or significant storm events were extracted in this project. The Appendix 5 album of articles is preceded by a chronological list of all 387 articles found, citing the headline and in many cases a few words quoted directly from the article to illustrate the type of event documented and the area. The dates or information in the chronological list of Appendix 5 in [square] brackets are not quoted from the articles' headlines or texts and are added to date, amplify or identify the event. eg:

Wed., Apr., 17, 1940 Earth Tremors Felt on South Coast ... at
 Rencontre West and Francois ... [Thurs.,
 April 11, 1940, not in Smith, 1966 but
 found in Staveley, et al., 1984]

The events recorded have been partitioned into two tables. Table 6 is a chronological listing of all storm events, related storm or lunar high tide events, and seiches located in the search period. Table 7 is a chronological listing of all earthquake events located in the search period.

About 83 storm, storm plus storm tide, or high lunar tide events were found (Table 6). An additional two seiche events on Lake Michigan were located for a total of 85 events. On Saturday, June 26, 1954 a tragic and apparently squall-induced seiche swept in on Chicago's beaches, drowning as many as 13 persons. The article reports a similar event near Holland, Michigan in 1938 which drowned 5 persons and notes that the 1954 event is the seventh freak tidal wave or seiche in the Great Lakes in this century. None of the 85 events in Table 6 is believed to represent a

Articles Located (continued)

seismically-induced event except the report of the previously-known Alberni-Port Alberni tsunami of March 27-28, 1964 which was caused by the Good Friday Alaskan Earthquake of Friday, March 27, 1964.

Seismic Events Located

The Table 7 listing of earthquake events found in the search includes 124 events. Few are Canadian events and there is a preponderance of the events in the 1952 to 1964 period (72%). This apparent skewing of the articles found is not believed to reflect more diligent searching in the 1952-1964 period, but rather reflects a change in the Western Star's news selection, a change in the news service used, a change in the focus of the news service itself or possibly a change in worldwide seismicity with more serious and hence more "newsworthy" earthquakes occurring. No attempt has been made to analyse the 97 seismic events noted which occurred outside of Canada and outside of the eastern United States.

Of the 124 seismic events, 27 are Canadian or eastern U.S. events. Of these, seven were eastern U.S. events (Table 7) and four of these were listed in Smith (1962, 1966) and were, therefore, previously-known. The event reported in the Western Star of Wed., Sept. 8, 1926, p. 6, col. 5, as being in New England on Tuesday(?), Sept. 7(?), 1926 (Table 7) is not reported in Smith (1962) and is a new event, unless it is somehow a misdated report of the Saturday, August 28, 1926 event in New England which is found in Smith (1962). The Attica, New York event on Tuesday, December 3, 1929 at 12:50 (GMT or 0750 EST) is reported in the Western Star on December 11, 1929, p. 1, cols. 4 & 5, as being felt (or at least recorded?) in Ottawa on "Tuesday morning [Dec. 3, 1929] at 1.30" (EST local time) and this may be a new report of an earlier, previously-unknown foreshock of

Seismic Events Located (continued)

this event. The Western Star of Wednesday, December 11, 1929, p. 1, cols. 4 & 5, reports that, "Eight earthquake tremors were felt at New York" on Tuesday night, December 3, 1929 (or possibly on Thursday night, December 5, 1929); in either case, the events appear not to be reported in Smith (1966) and are previously-unknown events. Further work on New York, Ontario and New England sources will be needed to check these three events.

Of the 27 Canadian and eastern U.S. events reported in the Western Star, twelve were Canadian events outside Nova Scotia and Newfoundland (Table 7); nine of these are in Smith (1962, 1966) and were, therefore, previously-known. We have assumed that the Wednesday, September 2, 1953 Terrace, B.C. event, the circa 0932 EDT, Wednesday, September 4, 1963 Baffin Bay earthquake and the 0305 EST, Wednesday, January 8, 1964 Rolph-ton/Deep River events are all in the Canadian Earthquake Epicentre File (CEEF); they are all beyond the scope of Smith (1966).

The event recorded in the Western Star of July 22, 1958, p. 1, col. 1 (Table 7), as having occurred on Monday, July 21, 1958 at 10:55 p.m. ADT (0155 GMT or UT, Tuesday, July 22, 1958) in St. Catherines, Hamilton, Toronto, Markham and Willowdale is recorded in Smith (1966) in the Canadian section as a Tuesday, July 22, 1958 event at 0146:40 GMT (1046:40 ADT) "about 15 miles west of Welland, Ont. Felt at St. Catherines and vicinity". The felt locations of Toronto, Markham and Willowdale appear to be new felt localities that greatly expand the felt area of this event.

Of the 27 seismic events in Canada and the eastern U.S. reported in the Western Star, two were Nova Scotian events (Table 7). The Western Star of Wednesday, August 6, 1902, p. 3, col. 5 contained a list of "Earthquakes In 1902" and cites a January, 1902 Nova Scotian earthquake, but does not give

Seismic Events Located (continued)

an exact date or a felt location. No January, 1902 Nova Scotian earthquake is cited in Smith (1962) or in Ruffiman and Peterson (1986). The January, 1902 event in Nova Scotia is, therefore, a new, previously-unknown event but will require further work in Nova Scotian sources to pin it down.

A Thursday, December 12, 1929 (aftershock) earthquake is cited (Western Star of Dec. 18, 1929, p. 1, cols 1 & 2) as being recorded in Ottawa and in Nova Scotia without an exact time and may possibly be a new event; it is not noted in Smith (1962) on the 12th. However, we believe this is simply a report of the Friday, December 13, 1929, previously-known aftershock that was felt in Nova Scotia at 0058:01 GMT or at 2058:01 AST on Thursday, December 12, 1929 (local time); it is not a new event.

Of the 27 Canadian and eastern U.S. seismic events noted in the Western Star six were Newfoundland events (Table 7):

1. Approximately Monday, April 24 to circa Monday, May 1, 1916 - Cape St. John, northern Notre Dame Bay
2. Saturday, February 28, 1925 - felt at Lomand on Bonne Bay
- 3.1 A possible foreshock (?) of the main Monday, November 18, 1929 event felt 7 minutes before the main event at Corner Brook
- 3.2 The main event on Monday, November 18, 1929 - felt island-wide
4. Thursday, April 11, 1940 at Rencontre West and Francois, south coast
5. Thursday, January 5, 1956 - Conception Bay, Trinity Bay

Of the six events, only the well-known, Monday, November 18, 1929 event is noted in Smith (1966). Smith does not note the possible foreshock event cited in the Western Star of Wednesday, November 20, 1929 (p. 2, col. 2) as occurring seven minutes before the main shock in Curling (Corner Brook); this may possibly be a new event or a foreshock of the main event. It may also be a mixing of reports where the local times noted by observers

Seismic Events Located (continued)

differed by seven minutes.

The event felt at Lomond on Bonne Bay at 10:55 p.m., NST, Saturday February 28, 1925 and reported in the Western Star on Wed., March 18, 1925 on p. 2, col. 3 is the first documented, felt report of the Saturday, February 28, 1925, 2119:20 EST (2049:20 NST), Charlevoix, P.Q. earthquake. Smith (1962) and his map on page [303] do not cite this major event as having been felt in Newfoundland. Staveley et al. (1984) had found a poorly-documented recollection of this Newfoundland felt report by a Dr. L.M. Green in the newspapers after the November 18, 1929 Laurentian Slope earthquake, but had not traced its origin or been able to confirm it (Staveley et al., 1984, p.16, and p. 27; Adams in Staveley, et al., 1984, p.2). This felt report of the February 28, 1925 Charlevoix earthquake is a new event for Newfoundland and will require the isoseismal lines on Smith's (1962) figure on page [303] to be slightly redrawn to extend further along strike of the Appalachian mountain chain.

The event felt on Thursday, April 11, 1940 along the south coast of Newfoundland at Rencontre West and Francois and the event felt in Conception Bay on Thursday, January 5, 1956 at 11:20 a.m. are both events that are not in Smith (1966). However, both these events were caught by Staveley et al. (1984) in their first compilation.

The Newfoundland event noted in the Western Star of Wednesday, May 10, 1916, p. 2, col. 3 (Table 7; Appendix 5) is noted as having been reported "by mail this week" and as having occurred at "The light station Cape John, Gull Island". Two shocks were felt over a one minute interval and "dishes, pictures and other articles were thrown to the floor and smashed ... ". The likely date is circa Monday, April 24 to circa Monday, May 1, 1916.

Seismic Events Located (continued)

Regardless of the event's exact date, it is not in Smith (1962) or in Staveley et al. (1984 or 1986). It is not on the Canadian Earthquake Epicentre File (personal communication, Anne Stevens and John Adams, Geological Survey of Canada, Ottawa, December 21, 1989). It is a new Newfoundland event that will require additional work in Newfoundland sources to pin down its exact date and other felt locations. There was an April 24, 1916 event recorded at 1107:45 a.m. (local time) at Ottawa that was "centred in an uninhabited region of Quebec some 125 miles north of Hull" (Smith, 1962).

There is a "Gull Island" 11.4 km directly to the east of Cape St. John in northern Notre Dame Bay. The lighthouse on Gull Island (49° 59' 54"N, 55° 21' 33"W) was established in 1884 and was in place and occupied in 1916; it still operates (Light No. 326, CHS Chart 4520; personal communication, Gordon Stead, Canadian Hydrographic Service, Dartmouth, Nova Scotia, October 5 and 9, 1990). The 1916 event felt in northern Notre Dame Bay may be related to the newly-recognised February 2, 1969 event (Appendix 3) felt in southern Notre Dame Bay (Staveley et al., 1984).

The search of the Western Star also turned up three personal accounts and one bylined story of the November 18, 1929 tsunami event on the south coast of Newfoundland. The personal accounts by Alice Bayley (1953), Don Morris (1958) and James H. Hussey (1959) and the 50th anniversary story by Michael MacKenzie (1979) appear to have been published in various other Newfoundland journals at about the same time they were printed in the Western Star. The November 18, 1929 tsunami was not subject to recollections and historic commemoration for the first 20-25 years after the event. It has only been in recent years that the annual 5th year or 10th year

Seismic Events Located (continued)

anniversaries have been marked by first-hand recollections and more recently by secondary accounts as survivors die over time.

Conclusions

This study has identified a large number of storms and storm tide events in Newfoundland that will be of interest to coastal geologists. None, including the Lake Michigan apparent seiches, are believed to be seismically-related tsunami events. However, seven apparently new seismic events in Canada and the eastern U.S. have been identified and one event has had its felt area expanded.

1. January, 1902 - Nova Scotian event. More research is needed in Nova Scotian sources.
2. Circa Monday, April 24 to Monday, May 1, 1916 at Gull Island, 11.4 km directly east of Cape St. John, northern Notre Dame Bay, Newfoundland. More research is needed in Newfoundland sources.
3. Saturday, February 28, 1925 at 10:55 p.m., NST, - felt report of the Charlevoix earthquake felt at Lomond, Bonne Bay, Newfoundland.
4. Tuesday(?), Sept. 7(?), 1926 in New England (unless somehow a confusion with the reported (Smith, 1962) event on Saturday, August 28, 1926). More research is needed in New England sources.
5. Tuesday morning, December 3, 1929 at 1:30 EST (a.m. local time) in Ottawa. This may be a new event or a previously-unknown roreshock of the 1250 GMT (0750 EST) December 3, 1929 Attica, New York event (or a confusion of times?). More research is needed in Ontario and New York sources.
6. Tuesday night, December 3, 1929 (or possibly Thursday night, December 5, 1929), "Eight earthquake tremors were felt at New York". Further research is needed in New York sources.
7. Monday, November 18, 1929 - possible roreshock seven minutes before the main shock at Curling (Corner Brook), Newfoundland.
8. Monday, July 21, 1958 at 10:55 p.m. ADT (2155 EDT) in St. Catherines, Hamilton, Toronto, Markham and Willowdale is an expanded report of the documented (Smith, 1966) Tuesday, July 22, 1958 event at 0146:40 GMT (Monday, July 21, 1958 at 2146:40 EDT).

Conclusions (continued)

Of the eight events above, three appear to be definitely new events; one in the northern part of Notre Dame Bay of Newfoundland in late April to early May, 1916, one in Nova Scotia in January, 1902, and an eight-tremor event "at New York" on Tuesday (or Thursday) night, December 3 (or 5), 1929. Each of these events will need some additional research that is beyond the scope of this study.

Acknowledgements

The senior author would like to acknowledge the input of his six co-authors. In particular, the wisdom and foresight of Bruce Stevenson in saving the 1900-1942 collection of the originals of the Western Star is to be commended. Had these not been saved, five of the six microfilm gaps could never have been closed. We also recognise the willingness of Mr. Stevenson to make his collection available and to share his detailed inventory and the result of his own searching. It is to be hoped that a permanent home for the Bruce Stevenson Collection can be found in Corner Brook, where it will be properly archived over time yet be available to researchers and local citizens.

The staff of the Provincial Reference and Resource Library were most helpful. PRRL has the most complete microfilm collection of the Western Star at present and was most cooperative in lending microfilms to the Public Archives of Nova Scotia (PANS) and in assisting Daniel Boyce in locating materials at PRRL or in borrowing microfilms for copying at the Memorial University Library Copy Service. Gail Malone and Derek Bussey at PRRL guided our interlibrary loan applications in St. John's. Anjali Vorha and Phillip Hartling guided the interlibrary loans on the PANS end. Sandra Burrows at the National Library and Anne Hart at the Centre for

Acknowledgements (continued)

Newfoundland Studies of the Memorial University Library were of assistance on occasion. R. Calvin Best of the Provincial Archives of Newfoundland and Labrador provided a detailed inventory of their holdings of the Western Star. The MUN Library copy service provided the bulk of the copies required.

A special note of appreciation is due for the effort of Charles Cameron and Derek Bussey at PRRL who assisted in getting us copies and annotation details of certain articles which were of poor quality or which only turned up after a partial index was found by Mr. Bussey, long after our student assistance was no longer available in St. John's. The assistance of PRRL in this regard was essential to the completeness of the project and is hereby recognised; Daniel Boyce also came back on board for a final day in late June 1990 to get us over a final hurdle in St. John's.

A special note of thanks to Michael J. Ralph, the Editor of The Pilot of Lewisporte, Newfoundland. Mr. Ralph was aware of our search for historic seismic events and sent along three unsolicited reports on the Sunday, February 2, 1969 event in southern Notre Dame Bay. His assistance is typical of the interest and enthusiasm we have encountered in many Newfoundland residents when they became aware of our research.

Our long-suffering Scientific Authority, Dr. John Adams of the Geological Survey of Canada, had the faith and patience of Job as this project struggled to reach completion. Cheryl Byard helped in the office; Gerry Hickman more than helped as the word processing of the lists and appendices finally, finally were completed.

Microfilm Gaps: C.N.S.

<u>Starting Date</u>	<u>Final Date</u>	<u>Comments</u>
Thurs., Sept. 6, 1956	Wed., Sept. 4, 1957	Wed., July 18, 1956 issue is also missing.

Corner Brook Public Library

Corner Brook Public Library holds microfilms from 1907 onwards with the same gaps as are found at the Public Archives of Newfoundland and Labrador. Similarly, the Western Star (Canadian Newspapers Co. Ltd.) itself only holds microfilm with the same gaps. The Western Star office has no albums of binding copies. No one apparently holds the microfilm in the gap from Thursday, September 6, 1956 to Wednesday, September 4, 1957 inclusive. However, this gap can be filled from a bound volume of original copies found at the Provincial Reference and Resource Library.

National Library of Canada

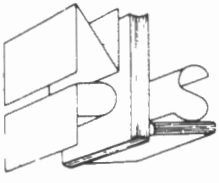

The National Library of Canada holds no original copies and holds only microfilms with the same gaps as the Public Archives of Newfoundland and Labrador.

Table 2

Holdings of original issues of the Western Star
 and Inventory of bound volumes of original issues
 of the Western Star found in the
 Provincial Reference and Resource Library
 St. John's, Newfoundland

The Provincial Reference and Resource Library (P.R.R.L.) is now the designated library for holdings of all original copies of newspapers most of the holdings that were once at the Provincial Archives of Newfoundland and Labrador are generally now at P.R.R.L. (however, not yet all of these have been transferred). The following list comes from a letter by Derek Bussey of January 8, 1989[sic] (actually January 8, 1990). The holdings of microfilm are not quite correct here in Mr. Bussey's letter and are found in more detail in Table 1.

Daniel Boyce inventoried the bound volumes of originals at P.R.R.L. in full detail and that inventory follows Mr. Bussey's letter. The July 18, 1956 issue missing on the microfilm is found in the bound volume and the interval Thursday, September 6, 1956 to Wednesday, September 4, 1957 is found as one bound volume and just has never been microfilmed it seems.

January 8, 1989

Mr. Alan Ruffman
President
Geomarine Associates Ltd.
5112 Prince Street
P.O. Box 41, Stn. "M"
Halifax, Nova Scotia
B3J 2L4

Dear Mr. Ruffman:

Thank you for your letter of December 5, 1989. In reply to your request I am enclosing an up to date list of our holdings of the Western Star in bound, unbound and microfilm format.

With regard to the holdings of the PANL, I have been informed that they still have the bound volumes for the years 1960-69, as well as the microfilm for the period 1907-1958. Their microfilm collection has the same gaps as does our own, especially for the early years of this century.

I could not find any information regarding the holdings of the National Archives, however, according to the Union List of Canadian Newspapers the National Library has the Western Star on microfilm for the period 1988 to the present.

With regard to the whereabouts of the original papers for the period 1905-1946 I have been informed by Charles Cameron, our department head, that they are in the possession of Mr. Bruce Stevenson, 641 O'Connell Drive, Corner Brook, Nfld. (709) 785-5265. I understand from Mr. Cameron that Mr. Stevenson may allow individuals to have access to these volumes if the microfilm is unsuitable for copying.

I hope that this information will be of use to you in your research.

Sincerely yours,

Derek Bussey

DEREK BUSSEY, Newfoundland Collection Librarian
Provincial Reference and Resource Library

PROVINCIAL REFERENCE AND RESOURCE LIBRARY
HOLDINGS OF THE "WESTERN STAR"

- A. Bound Volumes available for public use. This includes the Reference Library Collection as well as volumes which formerly belonged to the Provincial Archives.

1946
 1947
 1950
 1952
 1953 - Sept. 1972
 Jan. 1973 - June 1978
 Sept. - Oct. 1978
 Jan. 1979 - April 1982

- B. Wrapped bundles of individual papers ready for binding but not available for public use:

May 1982 - Present

- C. Wrapped bound volumes in poor condition and unsuitable for public use:

April 1900 - Dec. 1902
 1903 - 1905

- D. Wrapped bundles of individual papers possibly containing some gaps and therefore not available for public use:

1945
 1948
 1949
 Oct. - Dec. 1972
 July - Aug. 1978
 Nov. - Dec. 1978

- E. Microfilm:

April 1907 - March 1909
 May 1913 - March 1922
 April 1924 - March 1926
 April 1930 - Sept. 1956
 Sept. 5, 1957 - Oct. 1959

Microfilm gaps:

April 1909 - April 1913
 April 1922 - March 1924
 April 1926 - March 1930
 Oct. 1956 - Aug. 1957

Table 3

Holdings of bound volumes of original issues of the Western Star
at the Provincial Archives of Newfoundland
and Labrador, St. John's, Newfoundland

Most of the bound copies of the Western Star have been transferred to the Provincial Reference and Resource Library. However, the Provincial Archives of Newfoundland and Labrador still hold the years 1960 to 1969 in original issues as a series of bound volumes.

Mr. Alan Ruffman
Geomarine Associates Ltd.,
P. O. Box 41, Stn. 'M'
Halifax, NS
B3J 2L4

Dear Mr. Ruffman:

This is to acknowledge your inquiry of April 12, 1990, with regard to the location of the original copies of the Western Star of Corner Brook.

The Provincial Archives of Newfoundland still holds some original copies of the Western Star.

The Historical Directory of Newfoundland and Labrador Newspapers, 1807 - 1987, by Suzanne Elliston, is now incorrect in most of its references to original holdings of newspapers at the PANL. Most of our original newspapers have been transferred to the Provincial Reference and Resource Library. Those originals still at the Provincial Archives will be transferred in the near future.

If a researcher wishes to see a newspaper, that person is directed to the microfilm copy of that paper. Should the PANL not have that newspaper on microfilm, the researcher is directed to another institution which has that microfilm copy.

The original copies of the Western Star still held at the PANL are bound volumes. I am unaware of where your researcher was given the information that these newspapers were unbound.

I have attached a list giving the information which you requested on these volumes of newspapers.

.../2

Mr. Ruffman - page 2

The microfilm copies of the Western Star held at the PANL were obtained from the following company.

Preston Microfilming Services Ltd.,
2215 Queen St. E.,
Toronto, ON

I hope this information is useful to you for your inventory.

Sincerely yours,

R. Calvin Best
Head, Reference and
Researcher Services.

RCB/jd
enclosures.

Table 4

Inventory of the Bruce Stevenson
Collection of original copies of the Corner Brook
Western Star, April 4, 1900 to March 27, 1942
Vol. 1, No. 1 to Vol. 42, No. 52

This inventory was made up in the full detail here by Mr. Bruce Stevenson. Mr. Stevenson kindly provided it to Geomarine Associates in September, 1987 long before we were able to define funds for a search. Mr. Stevenson then provided the results of his search of the Western Star from 1900 to 1925 to Andrew Smith in the fall of 1989. Bruce Stevenson has made a significant contribution to this project and his effort is certainly appreciated.

Missing issues or issues with pages missing in
the Bruce Stevenson Collection of the Corner Brook
Western Star

Range of Collection: April 14, 1900 to March 27, 1941
Vol. 1, No. 1 to Vol. 42, No. 52

<u>Volume</u>	<u>No.</u>	<u>Date</u>	<u>Comments</u>
Vol. I	No. 1	Wed., April 4, 1900	pasted down so obverse sides inaccessible
Vol. III	No. 1	Wed., April 2, 1902	shredded, not useable?
Vol. III	No. 12	Wed., June 18, 1902	missing
Vol. III	No. 23	Wed., Sept. 3, 1902	missing
Vol. IV	No. 2	Wed., April 8, 1903	missing
Vol. IV	No. 3	Wed., April 15, 1903	missing
Vol. IV	No. 19	Wed., Aug. 5, 1903	missing
Vol. VII	No. 1	Wed., April 4, 1906	page missing, both sides
Vol. IX	No. 1	Wed., April 1, 1908	page missing, both sides
Vol. IX	No. 52	Wed., March 31, 1909	last page missing, both sides
Vol. XIII	No. 46	Wed., Feb. 12, 1913	missing
Vol. XIV	No. 33?	Wed., Nov. 19, 1913	missing
Vol. 17	No. 19	Wed., Aug. 9, 1916	missing

Note: Several issues have pages that are in poor condition with some parts missing.

Table 5

Listing and notes re the Issues of the Western Star searched by Katherine Hattie on Microfilms Nos. 12-31 from May 16, 1947 to September 5, 1956. The underlined 1990 dates on the left are simply the dates on which she searched. The year, then the volume number, (as of September 15, 1952 when the paper became a daily) and the issue number are found in the two leftmost columns. Comments are found in the right hand column (and occasionally in the left hand column). The comments note missing issues or pages misnumbered issues, etc.).

Wed., March 4, 1931	high tide and storm, Boston, Nova Scotia coast and New England
Tues., Oct. 13, 1931	storm, high tide, Domino, Labrador
Sat., Sept. 17, 1932	S.W. Nova Scotia, Annapolis Valley
Mon., Oct. 17, 1932 to Tues., Oct. 18, 1932	storm, Boston, Rhode Island, New England
Sat., Oct. 29, 1932 to Sun., Oct. 30, 1932	high tide and storm at Nardini's, Corner Brook area

Table 6 (continued)

<u>Date</u>	<u>Location and Comments</u>
Thurs., Feb. 9, 1933	high tide on west coast and hurricane highest tide in 30 years, St. Georges, Bay of Islands, water rose 19 inches over floors at Curling
Sat., (night) Feb. 11, 1932 to Sun., Feb. 12, 1932	gale on west coast, no high tide at Bay St. George or Bay of Islands, Bonne Bay, highest tide in 40 years
Fri., Oct. 13, 1933 to Sat., Oct. 15, 1933	heavy rain and wind, end of hurricane that came up coast and did heavy damage
circa Wed., Feb. 21, 1934	Scotian Shelf Storm
Wed., Dec. 19, 1935 to Thurs., Dec. 20, 1935	high tides, Gaspé, Quebec
Thurs., Aug. 24, 1935 to Fri., Aug. 25, 1935	August Gale, eastern Newfoundland, 31 lives lost
Wed., Sept. 30, 1936	storm, Labrador coast, 36-hour storm
Mon., Oct. 12, 1936 to Wed., Oct. 14, 1936	storm, N.W. coast, N. Peninsula, Apples downed in Nova Scotia, Ontario blizzard
Sun., May 16, 1937 to Mon., May 17, 1937	rain storm in Massachusetts area
Sun., Nov. 18, 1937	storm and high tide, Brunette Island, South coast
Sat., Nov. 27, 1937	storm, Codroy Valley
Tues., March 14, 1939 to Wed., Mar. 15, 1939	storm, "worst March storm in fifty years swept over the North Atlantic seaboard", New England, Eastern Canada, tail end at Curling, worst in Massachusetts since the "historic blizzard of 1888"
Wed., May 31, 1939 to Thurs., June 1, 1939	storm on west coast
Sun., July 9, 1939	electrical storm, Corner Brook
Tues., Oct. 17, 1939	storm, Sacred Island, Quirpon, Chapel Is. near Belleoram
Mon., Nov. 6, 1939	storm, drove schooner TIDAL WAVE ashore
Mon., March 31, 1941 to Sat., Apr. 5, 1941	inland snow storms that blocked Newfoundland railway

Table 6 (continued)

<u>Date</u>	<u>Location and Comments</u>
Thurs., July 3, 1941	severe storm of wind, Bay of Islands
Thurs., Sept. 18, 1941 to Fri., Sept. 19, 1941	storm, Strait of Belle Isle, Bay of Islands
Fri., Jan. 4, 1942	"terrific wind and rain storm", Corner Brook
Sat., March 9, 1942	real old-fashioned snow blizzard, Corner Brook
Sat., Dec. 31, 1945 to Sun., Jan. 1, 1946	big storm, very little wind, high tide
Fri., Oct. 17?, 1947	east coast storm, heavy ground sea
(night) Tues., Oct. 21, 1947 to Wed., Oct. 22, 1947	hurricane, (this is storm that took Squarry Head Light in Bonavista?) Possibly also Oct. 29, 1947??
Wed., June 9, 1948	high tide, river flood on Columbia River in Portland, Oregon
Sat., (afternoon) March 5, 1949 to Sun., March 6, 1949	storm, Burgeo, stormy all week
Wed., March 16, 1949	storm and high tide at Channel, worst since November [18], 1918, west coast, tide 10 ft. over normal
Thurs., Feb. 22?, 1951	heavy gale, high tide, Bonne Bay
Wed., Dec. 19, 1951 to Thurs., Dec. 20, 1951	storm and high tide, Bay St. George, Stephenville Crossing, Bay of Islands
Tues., Jan. 8, 1952 to Wed., Jan. 9, 1952	storm on west coast, Newfoundland
Tues., Feb. 19, 1952	storm on railway near Stephenville
circa Fri., March 14, 1952	storm, Elliston
circa Wed., March 26, 1952	storm and high tide, Halifax, Nova Scotia
Fri., Oct. 3, 1952	12-foot high tidal wave as a result of typhoon, Hokkaido Island, Japan
Mon., Oct. 20, 1952	tidal wave from typhoon in Siagon, Indo-China

Table 6 (continued)

<u>Date</u>	<u>Location and Comments</u>
circa Wed., Nov. 5, 1952	storm, southern Newfoundland
Thurs., Nov. 13, 1952	storm, eastern Newfoundland, Bay de Verde
Tues., Nov. 18, 1952 to Wed., Nov. 19, 1952	storm, Cape Breton Island, St. John's, Brigus, Wild Cove, E. Newfoundland, Grand Bank, Harbour Breton
Sat., April 18, 1953	storm, S.W. Nova Scotia
Sat., June 26, 1954 (0945 a.m.)	seiche, tidal wave rolled over Chicago beaches and piers, atmospheric seiche event apparently - drowned 13? Article reports similar event near Holland, Michigan in 1938. 5 drowned - notes seventh freak tidal wave or seiche on the Great Lakes in this century.
Thurs., (noon) Nov. 11, 1954	high tides and gale force winds, Tantramar, Nova Scotia, Moncton, New Brunswick
Tues., Nov. 30, 1954	extraordinary high tide (not a storm), St. John's, wharves inundated
Mon., Jan. 10, 1955 to Tues., Jan. 11, 1955	bad storm, E. Newfoundland, St. John's, Conception Bay
circa Fri., Oct. 5, 1956	24 foot tidal wave threatens India
Sun., Feb. 15, 1959 to Mon., Feb. 16, 1959	aftermath of hurricane, storm and snow slide in St. John's outer Battery area, 5 killed, 13 trapped
Fri., March 20, 1959	storm, western Newfoundland
Fri., Dec. 8, 1961 to Sun., Dec. 10, 1961	gales, eastern Newfoundland, high tides
circa Oct. 10, 1962	hurricane Daisy along south coast of Nova Scotia
Thurs., Dec. 19, 1963 to Sat., Dec. 21, 1963	storm south of Newfoundland - 3-day storm raked Canada's Atlantic Coast
Fri., Mar. 27, 1964 to Sat., March 28, 1964	tsunami, Port Alberni, Port Alice, B.C. This event was from the Good Friday major Alaskan Earthquake.
Mon., Jan. 1, 1990 to Tues., Jan. 2, 1990	storm, St. Georges Bay, 100 km/hr wind, "seas ... have never witnessed before"

Table 7

Chronological listing of earthquake events located in
the Western Star from April 4, 1900 to June 15 1964

Table 7

Chronological listing of earthquake events located in the Western Star from April 4, 1900 to June 15, 1964

<u>Date</u>	<u>Location and Comments</u>
Mon., Feb. 3, 1902	Quebec to Rimouski, felt in New Brunswick last week, in Smith (1962)
? , Jan. ?, 1902	January, 1902 earthquake in Nova Scotia mentioned in list, not in Smith (1962), a new previously-unknown event.
circa Mon., April 24, 1916 to circa Mon., May 1, 1916	Gull Island east of Cape St. John, northern Notre Dame Bay, Newfoundland, not in Smith (1962); a new event but possibly a felt report of an 1107:45 a.m. event on April 24, 1916 in an uninhabited part of Quebec (Smith, 1962) but very unlikely
Sun., July 2, 1922	Northern New Brunswick event felt in the Maritime Provinces, at 5:23 -5:30 p.m.; in Smith (1962)
Mon., Feb. 23, 1925	Seaward, Alaska, broke water pipes
Sat., Feb. 28, 1925	Report of "Charlevoix Earthquake" felt at Lomond, on Bonne Bay, Newfoundland at 10:55 p.m., not in Smith (1962), a new felt location
Mon., Aug. 23, 1926	Pembroke, Ontario, at 1250 p.m.; in Smith (1962), but this article provides more description
Tues.(?), Sept. 7(?), 1926	New England, not in Smith (1962) or may possibly be a 10-day misreporting of the Saturday, August 28, 1926 event which is in Smith (1962)?
Fri., March 16, 1928	Xylocastro near Corinth, Greece
Wed., March 28, 1928	Dalhousie instrument recorded a teleseismic event this morning
Tues., Oct. 8, 1929	Maine, two shocks, in Smith (1966)
Mon., Nov. 18, 1929	possibly a slight foreshock 7 minutes before main shock, not in Smith (1966), felt in Curling - Corner Brook
Mon., Nov. 18, 1929	main event at 1702 NST felt throughout Atlantic Provinces
Tues., Dec. 3, 1929 (at 1:30)	at Ottawa, probably an unreported foreshock for an event at Attica, N.Y. which is in Smith (1966)?
Tues., Dec. 3, 1929 or Thurs., Dec. 5, 1929	eight tremors ... at New York on Thesday[sic] night ... not in Smith (1966) for either date
Wed., Dec. 11, 1929	slight earth shocks were felt in California

Table 7 (continued)

<u>Date</u>	<u>Location and Comments</u>
Thurs., Dec. 12, 1929	aftershock, of Nov. 18, 1929 event felt in N.S. probably is event on 13th, Friday (GMT), which is in Smith (1966)
Fri., Feb. 14, 1930	Franklin, N.H., incorrectly noted as <u>New Haven</u> in article, found in Smith 1966)
Wed., Feb. 23, 1930	teleseismic quake noted on instruments at Halifax, New York, London, England
Mon., July 27, 1931 (2.21 and 3.26 a.m.)	N.Y. instrument at Fordham University, "probably in the Carribean"
Sat., July 23, 1962	Seattle area, referenced in next article
Sat., Aug. 6, 1932 (2.16 p.m.)	Seattle earthquake. Refers to event on about Sat., July 23, 1932 as well
Thurs., Nov. 3, 1932 (10:55 a.m.)	San Francisco, 4 shocks felt
Sat., March 11, 1933	earthquakes, Los Angeles area - Long Beach
Fri., Nov. 1, 1935	epicentre north of Ottawa, west of Quebec City, in Smith (1966), the "Timiskaming Earthquake"
circa Tues.?, Dec. 10?, 1935 (10:46 EST)	instrumental recording at Ottawa of teleseismic event
Sun., Oct. 18, 1936	Northeast Italy, Trieste
Thurs., Dec. 23, 1937	Mexico City earthquake began at 7:18
Thurs., April 11, 1940	Rencontre West, Francois - not in Smith (1966) but in Staveley <u>et al.</u> , 1984
Fri., May 28, 1943	Earthquake in Rhineland Mountains, southwest Germany, referred to at time of March 14, 1951 event
Sun., Sept. 25, 1946	Ottawa recorded a teleseismic quake
Fri., April 22, 1949	Article which contains a reference to the Feb. 28, 1925 Charlevoix Earthquake (From Our Files of 1925)
Mon., Aug. 8, 1949	earthquake in Quito, Equador
Sun., Oct. 16, 1949	Ottawa quake, in Smith (1966)
Sun., May 20, 1950	Cuzco, Peru earthquake

Table 7 (continued)

<u>Date</u>	<u>Location and Comments</u>
Wed., March 14, 1951	Rhineland Mountains, Germany, refers to a stronger May 28, 1943 event in S.W. Germany
Sun., Nov. 25, 1951 to Mon., Nov. 26, 1951	Formosa, Taipei, earthquakes
Mon., July 21, 1952	Tehachapi, California, earthquake
Sun., Oct. 12, 1952	San Francisco area, earthquake
Tues., Oct. 14, 1952	St. Lawrence earthquake, in Smith (1966)
Mon., Oct. 27, 1952	Northern Honshu, Japan, 85 light quakes
Thurs., Nov. 4, 1952	Kamchatka, giant quake and tidal waves
Thurs., Feb. 12, 1953	earthquake at Torroud, northeast Iran
Wed., March 18, 1953	earthquake in Turkey
Thurs., March 19, 1953	event in Cent. Am. recorded at Columbia Un. at 0333:43 EST
Sun., March 22, 1953	three more tremors in Turkey
Wed., May 6, 1953	Chile earthquake at 1323 EDT
Sun., Aug., 9, 1953	Ithaca, Greece, earthquake
Fri., Aug. 28, 1953	Japan quake
Wed., Sept. 2, 1953	Terrace, British Columbia quake, in Canadian Earthquake Epicentre File (CEEFF)
Thurs., Sept. 10, 1953	Paphos, Cyprus
Mon., Sept. 14, 1953	Suva, Fiji, quake and tidal wave
Tues., Sept. 15, 1953	5 more tremors Cyprus
Thurs., Sept. 24, 1953	Vibo Valentia, Italy, "fairly strong earthquake"
Wed., Sept. 30, 1953	Pasadena, California, instrument recorded event at 1507:49
Wed., Oct. 7, 1953	Bakerfield, California, quake of 4.5
Mon., Nov. 9, 1953	earth tremors Monday night in Ionian Islands
Mon., Nov. 16, 1953	Romania - Balkans, quake

Table 7 (continued)

<u>Date</u>	<u>Location and Comments</u>
Tues., Jan. 12, 1954	Long Beach, California two-storey frame house vibrated off foundation
Mon., Jan. 18, 1954	quake shook southwestern Greece
Fri., Feb. 5, 1954	Chiapas State, Mexico, quake
Sun., Feb. 21, 1954	Wilkes-Barre, Pennsylvania event, in Smith (1966)
Thurs., Feb. 25, 1954	Tokyo, Japan
Sun., April 30, 1954	Adelaide, Australia
Mon., March 8, 1954	San Salvador, El Salvador
Wed., March 24, 1954	Lake Garda, Northern Italy, 12 tremors
Thurs., April 29, 1954	Southern Gult of Lower California, Mexico
Fri., April 30, 1954	Central Greece
Mon., May 3, 1954	New Earthquake shakes Greece
Tues.(?), May 18?, 1954	Watsonville, Northern California
Wed., May 19, 1954	Bernese Alps, Switzerland
Fri., July 2, 1954	Central Phillippines, major quake
Sat., Aug. 14, 1954	Magerata, Italy
Thurs, Sept. 2, 1954	Tone River, Japan
Fri., Sept. 3, 1954	Dibrugah, Assam, India
Thurs., Sept. 9, 1954	Orleansville, Algeria, strong event, six new tremors during night of Sept. 9-10, 1954
Fri., Sept. 10, 1954	Another violent tremor Friday night, Orleansville, Algeria
Mon., Sept. 20, 1954	Lima, Peru
Sun., Oct. 3, 1954	lower Alaska mainland, Anchorage
Thurs., Oct. 7, 1954	Palu, Turkey
Thurs., Dec. 16, 1954	Reno, Nevada, at 0307 a.m. local time
Tues., Dec. 21, 1954	Eureka, California

Table 7 (continued)

<u>Date</u>	<u>Location and Comments</u>
Thurs., Feb. 10, 1955	Monte Sant Angelo, Italy
circa Mar. 21-23, 1955	Kilauea Volcano eruption and earthquake, Hawaii
Fri., April 1, 1955	southern Phillipines
Sun., April 10, 1955	large Phillipines aftershocks
Tues., April 19, 1955	Greek town of Volos
Thurs., April 21, 1955	Greek town of Volos
Sun., Oct. 23, 1955	San Francisco
Mon., Jan. 2, 1956	Los Angeles, Pasadena
Thurs., Jan. 5, 1956	Conception Bay event, felt at Harbour Grace, Carbonear, Hearts Content, West Bay and Trinity Bay - not in Smith (1966) but found in Staveley <u>et al.</u> , (1984)
Sun., Jan. 8, 1956	6 quakes hit Mexico, southern Mexico, Acapulco
Tues., Feb. 14, 1956	Tokyo, Japan
Fri., Mar. 16, 1956	Southern Lebanon, Friday night
Thurs., Apr. 19, 1956	Granada, Spain, late Thursday
Mon., July 9, 1956	Greek Island of Thera (Santorini)
Sat., June 21, 1956	coastal town of Anjar, India
Thurs., July 26, 1956	Anjar, Bhuj, Saurastitra, India
Sat., Sept. 1, 1956	Tokyo, Japan
circa Sun., Nov. 5/56	Athens, Greece
circa Sun., Mar. 3/57	Jamaica
circa Mon., Mar. 11/57	Greek Isles
circa Thurs., March 21, 1957	Aleutian Isles
Fri., April 26, 1957 (11:40 a.m.)	New England, Maine, in Smith (1966)
circa July 2, 1957	in the Mid East

Table 7 (continued)

<u>Date</u>	<u>Location and Comments</u>
circa July 28, 1957	Central Mexico
circa Aug. 2, 1957	Central Mexico
Mon., July 21, 1958	Monday night at 10:55 p.m. ADT (2155 EDT) Toronto, Hamilton, Markham, Willowdale, St. Catherines - no damage - eastern felt area near Toronto, not noted in Smith (1966)
(near midnight) Mon., Aug. 17, 1959	Hebgen Dam, West Yellowstone, Montana, landslides
Tues., Aug. 18, 1959	Tuesday night, new light shocks, Yellowstone
Wed., Aug. 26, 1959	Mexico
Thurs., Aug. 27, 1959	light shocks before dawn, Mexico
(early) Sun., April 10, 1960	Izmar, Turkey
(night) Sun., April 10, 1960	Seattle, Washington
(afternoon) Sun., April 24, 1960	Lar, Iran
Mon., June 6, 1960	Southern Chile
Thurs., Aug. 30, 1961	Northern Utah
Mon., July 30, 1962	3 quakes hit Columbia
Wed., Sept. 5, 1962	Salt Lake City, Utah
Wed., Sept. 4, 1963	Large offshore, 0932 EDT, Baffin Bay, in CEEF
Wed., Jan. 8, 1964	mild event at 0305 EST between Kirkland Lake and James Bay, Rolphton/Deep Bay event, in CEEF
Fri., March 27, 1964	Great Alaskan Earthquake of Good Friday
Sat., March 28, 1964 (0010)	first tsunami wave arrived at Port Alberni, British Columbia from Alaskan Earthquake of March 27, 1964
Fri., April 17, 1964 (0929)	magnitude 7 event recorded 300 mi southwest of Kodiak Island, Alaska
Sun., Feb. 2, 1969 (1325 NST)	light earthquake in Gander - Grand Falls area of Newfoundland (not included in statistics for this study because it falls after the June 15, 1964, cut off)

Transcript (continued)

WESTERN STAR (cont.)

Description:

The Western Star has, over the years, offered the usual features of a small city newspaper, acting as a spokesman for the interests and development of the west coast, particularly in the fisheries and forest industries. Usually maintaining a nonpartisan stance politically, the Star strongly opposed Bond's herring fishery policy in 1907. The Star was neutral in its attitude toward the Commission of Government and supported Confederation in 1948. With the closing of the Daily News in 1984, the Star became one of the only two remaining dailies in the province. A partial index to the Western Star is available in the Provincial Reference and Resource Library.

 BYLINE Dominique Lacasse
 STORY TYPE NEWS
 LENGTH OF STORY 293 words
 --- Strange list of R&D projects costs federal government \$159M ---

A "smart wheelchair," the dietary habits of blue mussels, and newspaper earthquake stories _ only a few of the subjects studied in more than 2,000 research and development contracts awarded by Supply and Services Canada so far this fiscal year.

Supply and Services has spent nearly \$159 million on R&D contracts during the first three-quarters of the current fiscal year, according to its latest R&D bulletin. The total for the same period in the previous fiscal year was \$146.2 million.

Although the total dollar value of the contracts is up nearly nine per cent over the same period in the previous year, the number of contracts awarded is down almost 17 per cent from 2,171 to 1,804. The result is a 30-per-cent increase in the value of the average contract, from \$67,353 to \$88,110.

Industry got nearly two-thirds of the contracts, while universities and individuals and a few government departments got the rest.

The biggest spender was National Defence, with \$49.1 million for 343 research projects.

Defence was followed closely by Energy, Mines and Resources, which spent \$32.3 million on 376 projects. Third was Fisheries and Oceans, which spent \$17.9 million on 362 projects.

The National Research Council just missed the top three, putting \$16.5 million into 140 projects.

Some recent projects include: a \$40,047-contract with the Hugh MacMillan Medical Centre in Toronto for a "survey to determine (the) desired properties of a smart wheelchair," for the National Research Council; a \$20,000 contract with a Halifax firm to study the "dietary selectivity of the blue mussel" for Fisheries and Oceans; and a \$4,000-deal with another Halifax company to review newspaper stories on earthquakes for Energy Mines and Resources.

Dear Sir:

Perhaps one should start by asking your "staff writer", Dominique Lacasse, and your readers, a trivia question. "What earthquake was Canada's most tragic seismic event?"

On February 9, 1990 Ms. Lacasse filed a page 3 story that appeared under the headline "Strange list of R & D projects cost federal government \$159 M." The article appears to be simply a recitation of data contained in a recent edition of the Department of Supply and Services R & D Bulletin. It ends with a parroting of the titles of three contracts that obviously caught her eye and stuck her as "strange". I recognise that this may not have been her adjective and only the choice of an anonymous headline writer.

In the case of the "\$4000-deal with another Halifax company" - ourselves - Ms. Lacasse might have bothered to pick up the phone to find out the nature of the contract behind the title and so elucidate the Citizen's readers rather than giving them virtually no information. The National Citizens' Coalition reacts from the hip; I would hope The Ottawa Citizen would invest in at least minimal research.

Our \$4000 contract with the Geological Survey of Canada is one of a series of very modest historical seismicity studies done in the four Atlantic Provinces and Quebec over the past four years. It is important to realize that our Canadian building codes for any area are based, in part, on the record of seismic activity that the particular area has experienced. In Canada, we now record earthquakes on a quite sophisticated net of automatically recording seismographs.

Prior to 1915 (at Halifax), we had no seismograph in eastern Canada. The only record of the earlier earthquakes is to be found in the historical record such as in newspapers, diaries, etc. No truly sensitive instruments were put in Halifax until circa 1952. By the same token, the country of

Newfoundland had no seismic recording equipment until after its confederation with Canada and even then recording instrument was not installed in St. John's until June 1, 1964. Even now, the seismic recording net is quite sparse on the east coast of Canada.

Thus, our "\$4000-deal" to scan the Western Star of Cornerbrook, Newfoundland from 1900 to 1964 for evidence of felt seismic activity is part of a program to flesh out the pre-instrumental seismic history of Newfoundland. Ultimately, it will play a small role in any revised national building code for Atlantic Canada.

This is particularly relevant when you stop to consider that Canada's most tragic earthquake was the 1702 NST, November 18, 1929, magnitude 7.2 event that occurred offshore south of Newfoundland and east of Cape Breton at the edge of the continental shelf. This major event caused an underwater landslide to flow as a turbidity current (or slurry) down the continental slope, ripping up large sections of twelve submarine communications cables. It also caused a tsunami or 'tidal wave' that arrived some 2.5 hours later and caused at least 27 deaths in the Burin area of Newfoundland and one in Cape Breton Island as well as very significant shore property and vessel damage.

Clearly, the federal government has a responsibility to understand as much about the seismicity of Atlantic Canada as it can - perhaps not so "strange" had Ms. Lacasse done her job as a reporter not just as a writer?

Important data

Re Dominique Lacasse's story, "Strange list of R&D projects costs federal government \$159M" (Feb. 9): Our \$4,000-contract with the Geological Survey of Canada is one of the modest seismicity studies done in the four Atlantic provinces and Quebec over the past four years.

Canadian building codes are based, in part, on the record of seismic activity that the particular area has experienced. In Canada, we now record earthquakes on sophisticated seismographs.

No sensitive instruments were put in Halifax until 1952. Newfoundland had no seismic recording instrument until one was installed in St. John's in 1964. Even now, the seismic recording net is sparse on the east coast of Canada.

Our \$4,000-deal to scan the *Western Star* of Cornerbrook, Nfld., from 1900 to 1964 is part of a program to study Newfoundland's seismic history. It will be used in any revised national building code for Atlantic Canada.

Canada's most tragic earthquake occurred on Nov. 18, 1929, south of Newfoundland and east of Cape Breton. It caused an underwater landslide that ripped up 12 submarine communications cables. It is also caused a tidal wave that caused at least 27 deaths in Newfoundland and one in Cape Breton Island as well as property and vessel damage.

Clearly, the federal government must understand as much about the seismicity of Atlantic Canada as it can.

Copies of three articles on the
Sunday, February 2, 1969
southern Notre Dame Bay
earthquake from The Pilot of
Lewisporte, Newfoundland

News from Herring Neck

Several people around here felt a little of the earth tremble, which was reported in most areas, on Saturday night of last week, but none reported it to be of a serious nature.

The Pilot

EMBREE

First of all I want to let the people who sent in notes during the past weeks that they were all sent in to Grand Falls but were not printed.

Around one o'clock on Sunday morning quite a few people here felt the earth tremor. Nearly everyone thought it was their furnace a lot got frightened, but we know that those things must happen for in Luke Ch. 21 verses 25-26 God tells us so and we know even great men's hearts are failing in fear in those days.

The Pilot
Lewisporte, Newfoundland

Earthquake Tremor Occurs

In this issue of the Pilot, we have a very unusual news item to report. It concerns an earthquake tremor which occurred in Newfoundland at 12.55 a.m. on Sunday morning Feb. 2.

It was felt here at Point Leamington and in surrounding communities, also, in other areas of the province. The quake lasted for several seconds, probably, half a minute or more.

For many of us, this was the first earthquake tremor that we ever experienced. The elderly folk tell us that an earthquake tremor occurred in this province in 1929. It was followed by a tidal wave, which caused much damage in some communities.

These earthquake tremors are not at all pleasant experiences. It gives one a very strange feeling to find the house shaking on a

calm, moonlit night
was last Saturday
Sunday morning)
or occurred. It is
when it has ended
it has lasted only
seconds.

Transcript of column 6:

calm, moonlit night, such as
was last Saturday night or
Sunday morning when the
tremor occurred. It is a
blessed event when it has ended,
though it has lasted only a
few seconds.

Appendix 4

Copy of July, 1963 article found in
The Evening Telegram re the installation
of the seismograph at Memorial University of Newfoundland.
This article was found by scanning the 'Earthquakes'
section of the general newspaper index found at the
Provincial Reference and Resource Library in
St. John's, Newfoundland.

Install measuring device on campus

Newfoundland will have its first seismograph in September. Construction has already begun on Memorial University's campus, where the equipment will be installed.

A seismograph is a piece of electronic equipment used for measuring earth tremors. It will be installed underground on the campus, attached to bedrock, and will measure the earth tremors photographically.

The seismograph will be encased in a vault underground, between the Arts and Science Buildings, making its location at the right of the campus. It will be accessible through the tunnel connecting these buildings.

The information gleaned from the seismograph will be used by the Federal Government and also by the physics department of the university.

Steam shovels are on the campus now, completing the first step in the installation program. Plans call for the seismograph to be installed in mid-August and the project to be completed

by the middle of September.

Newfoundland's seismograph will be one of a series of such machinery across Canada. The nearest one is at Halifax, used by Dalhousie University.

Appendix 5

Chronological list of all articles found, followed by
an album of the articles located in the search
of the Western Star,
April 4, 1900 to June 15, 1964

Chronological list is comprised of exact quotes of the headlines of the articles often with portions of the text to detail the type of event and the location, etc. Material in the [square brackets] is not quoted from the article, but is added to clarify the date or to amplify the information.
