

LEGEND

- AGC track lines
- Bathymetry (metres)
- 1000— Isobath

Bathymetry (m) using the reported assumed velocities converted to corrected depths according to Matthews' Tables (Carter, D.J.T. (1980), Echo-sounding correction tables).

Bathymetry sources and reliability:

Data type	Data source	Reliability*
A	Many CHS sounding lines Hughes Clarke et al (1992)	2
B	Sparse sounding lines CHS charts plus AGC cruises	4
C	Two Seabeam lines Atlantis II-116	1

* reliability from 1 (good) to 4 (poor) based on accuracy of navigation and density of soundings.

Note - Bathymetry is not to be used for navigation.
