BIBLIOGRAPHY FOR SURFICIAL GEOLOGY MAPPING IN CANADA

By R.J. Fulton, L. Maurice, and K.F. Bertrand

The reference list provides information on maps (scales greater than 1:50,000) of surficial materials of Canada. Most of the listed references are for standard published surficial or Quaternary geology maps, but a number are for figures from publications and theses, and maps that cover only limited aspects of surficial geology. This is not a complete list of all maps describing surficial materials as specialized maps such as those related to granular aggregate inventory and agricultural soils are not included, neither are open files and preliminary maps where these have been superseded by final maps. Old maps (such as those of Chalmers in the Maritime Provinces and of Johnston in the Prairie Provinces) have been retained, even though they might have been superseded as they may include information not shown on the more recent maps.

This list was compiled by R.J. Fulton, L. Maurice and K.F. Bertrand and contains references to the end of 1993. Special acknowledgement is made to several other individuals who provided information which helped with parts of this list: J.J. Clague (GSC) and P.T. Bobrowsky (British Columbia Geological Survey Branch) - Cordillera; J-S Vincent (GSC) - Quebec and Districts of Mackenzie and Keewatin; D.R. Grant (GSC) - Atlantic Provinces and D.G.E. Liverman (Newfoundland Geological Survey Branch) - Newfoundland.

References are organized by author and date. The area covered by each map, indicated by NTS designation, is given at the end of each reference. A % sign indicates only partial coverage of an NTS sheet. These same maps, grouped according to scales and provinces or territories and organized by NTS sheet, appear in a table on the back of the Surficial Materials Map of Canada (Fulton, 1995). The disk which accompanies this report includes the text of this list in WordPerfect 5.1, and ASCII delimited format. The ASCII delimited formatted information was compiled directly from a current database and includes 1994 and some 1995 references. Some of the references provided in digital format are incomplete and not available as regular publications. Abbreviations used are: NP - Not Published; NR - Not Relevant; in prep - not completed at the time this information was released. Any additions or correction are welcome; please send complete references (including scale and NTS areas covered) to the Geological Survey of Canada, 601 Booth Street, Ottawa, Ontario K1A 0E8.
