Fraser River Delta Slope Angles Southern Strait of Georgia

Slope angles were calculated using gridded data from a 1994 EM100 multibeam bathymetric survey. Colour-coded slope angles are superimposed on a shaded-relief image. The map datum is NAD83. The map projection is UTM Zone 10. The Landsat Spot image was used with the permission of MacDonald Dettwiler and Associates. Support for this research was provided by the Canadian Hydrographic Service, B.C. Hydro and the Panel for Energy, Research and Development.
