

Section and station locations

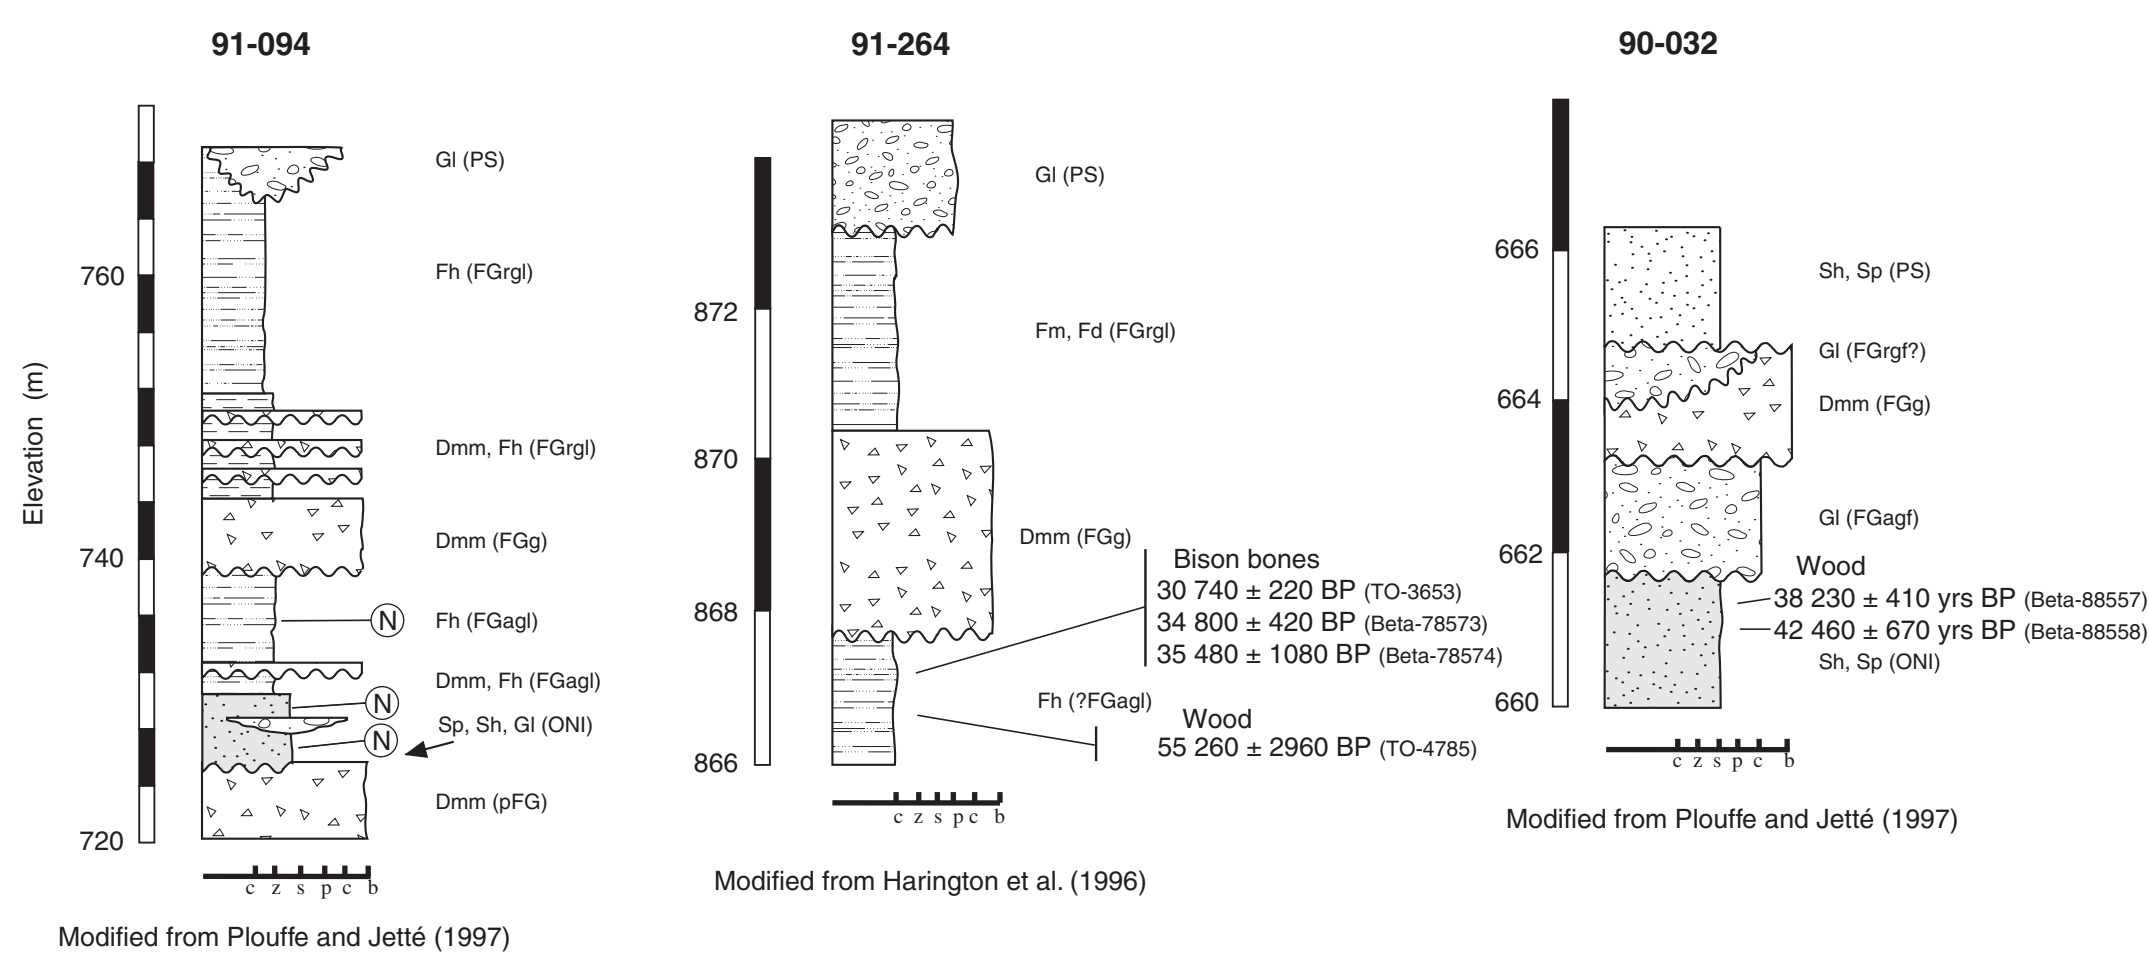

Sediments of the Fraser Glaciation

Section 91-266: Both diamictons were originally interpreted as till (pre-Fraser and Fraser glaciations Plouffe, 1992), but this interpretation has been revised following more detailed fieldwork. See text for details.

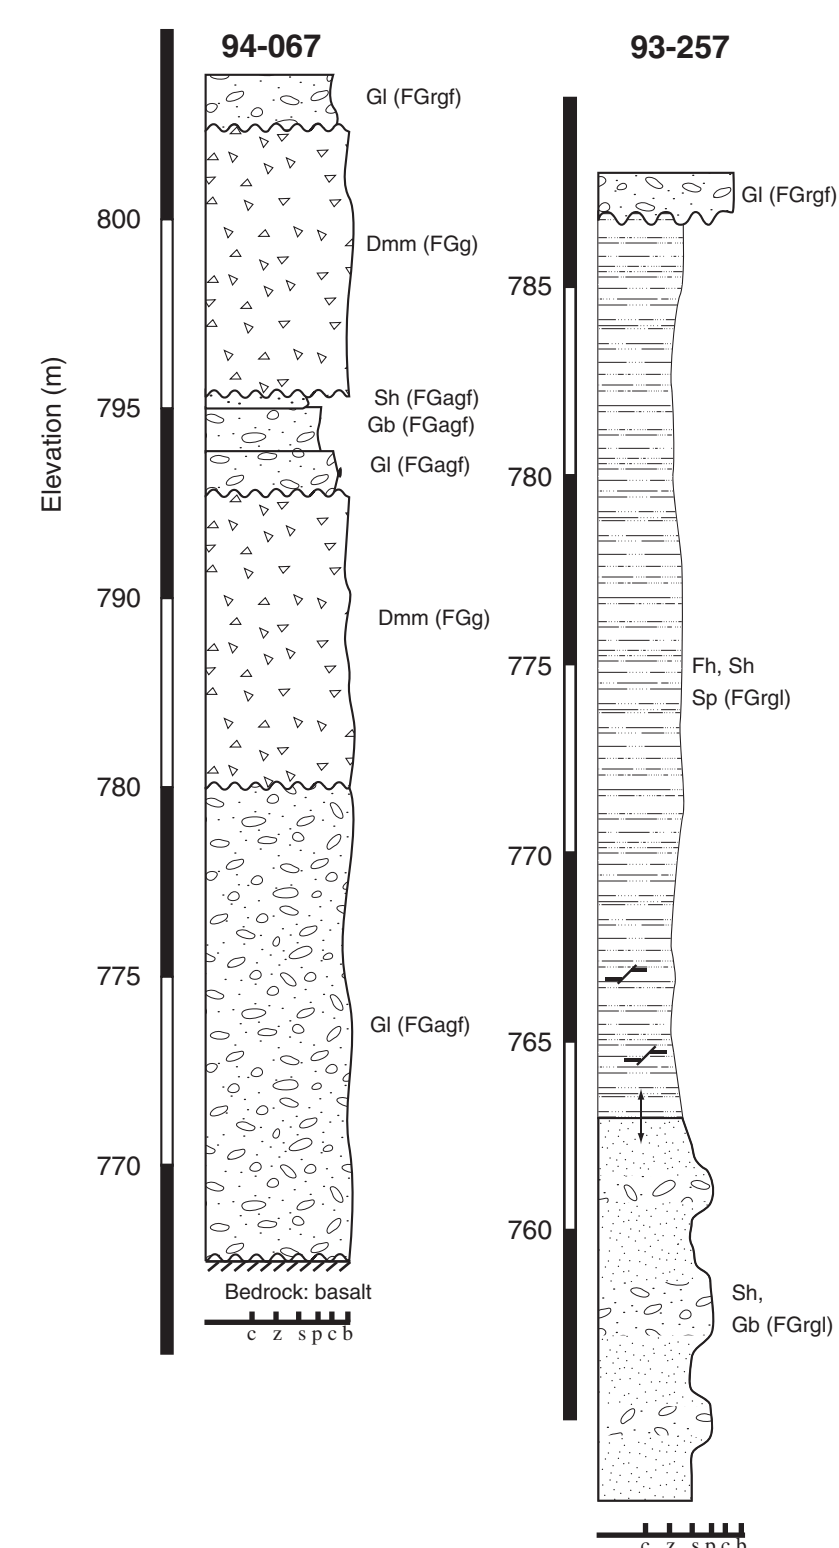

Sediments of a pre-Fraser glaciation and of the Olympia Nonglacial Interval

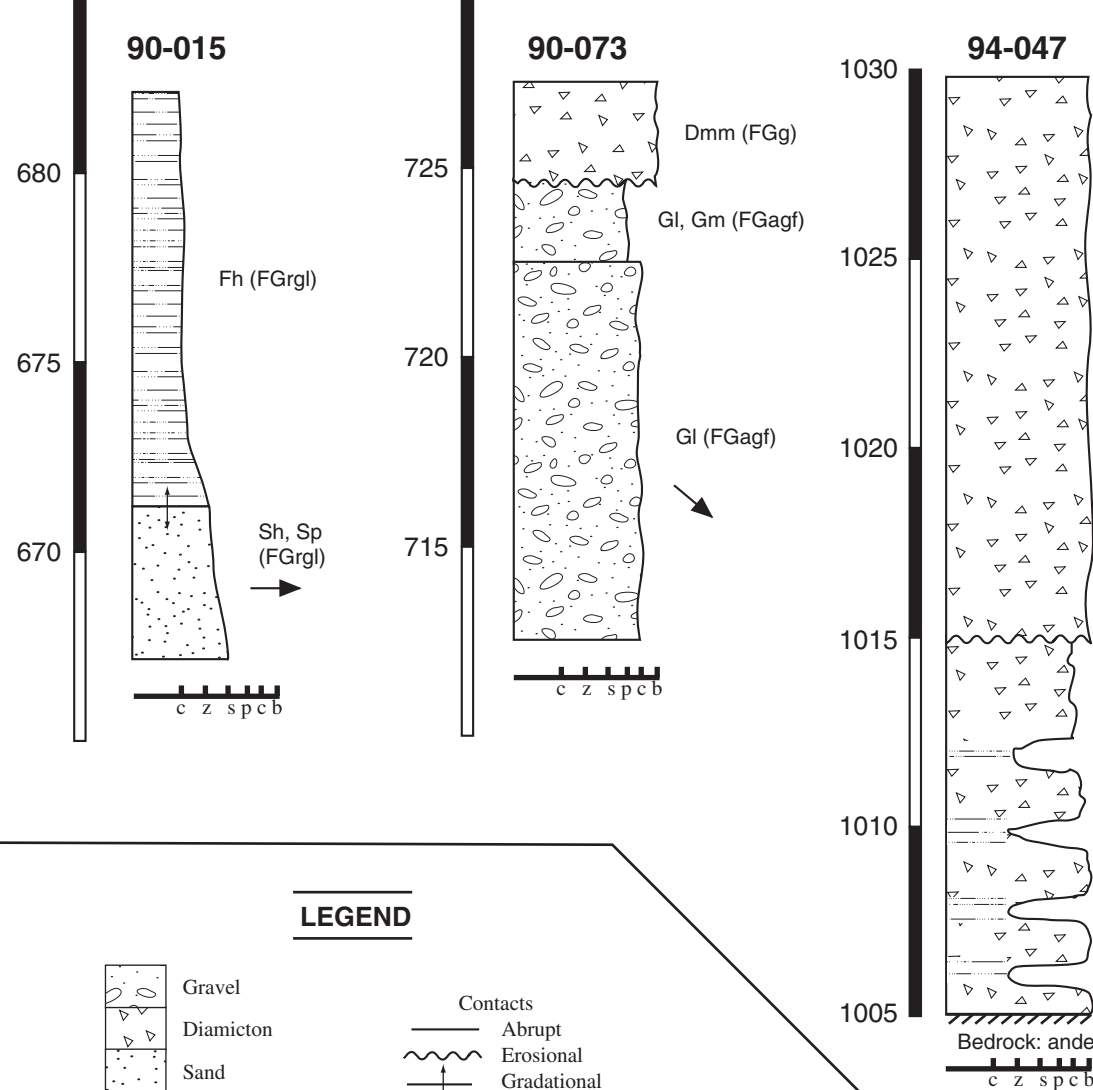

Old sediments of unknown age

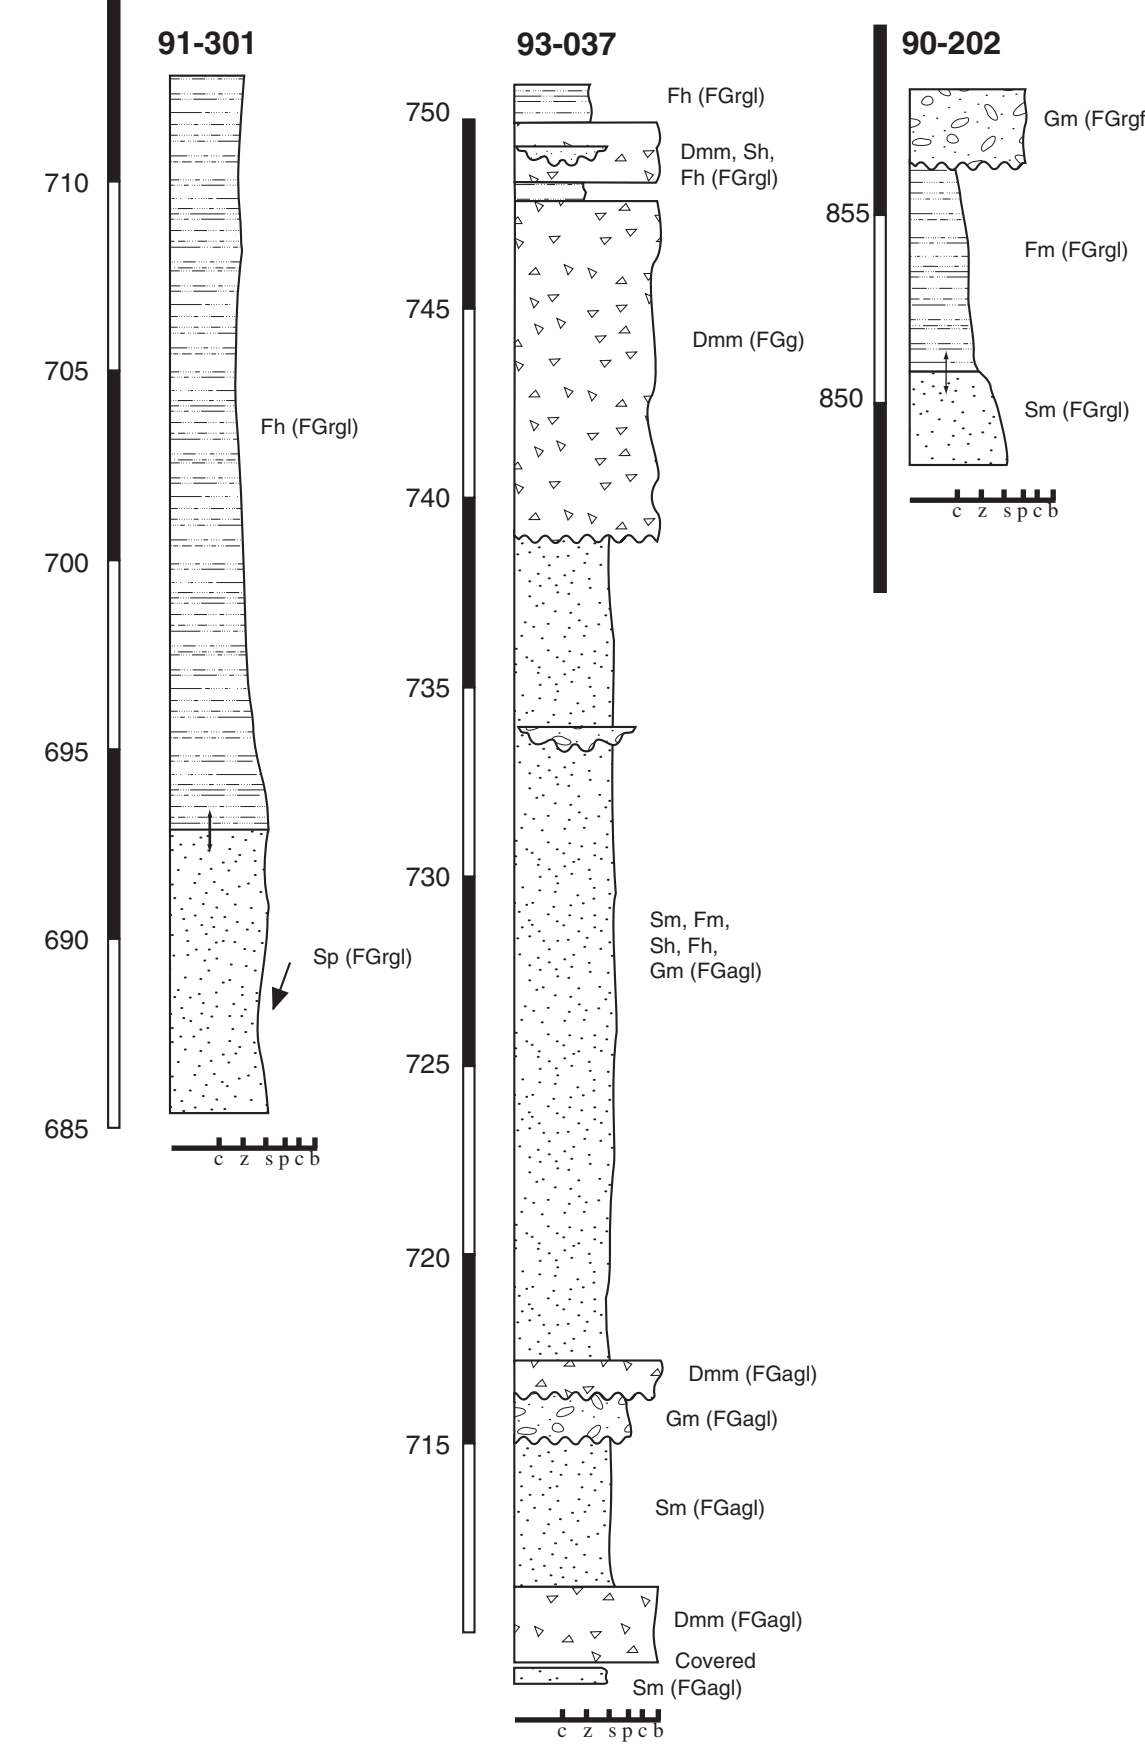

Babine Lake and Sutherland River valleys

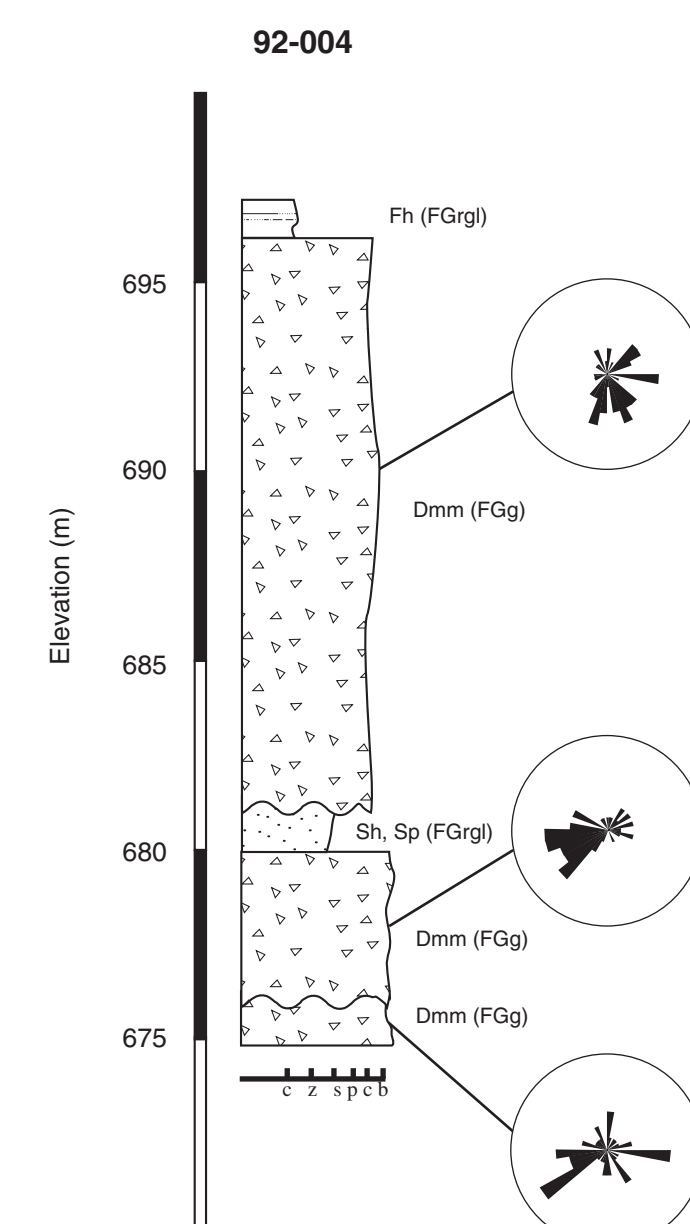

Southern region

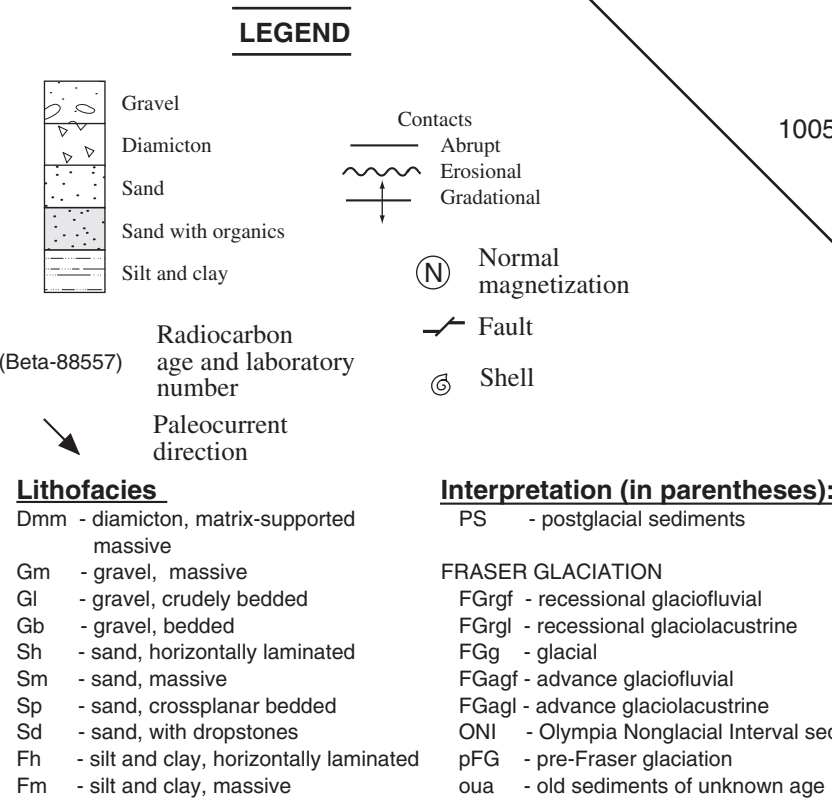

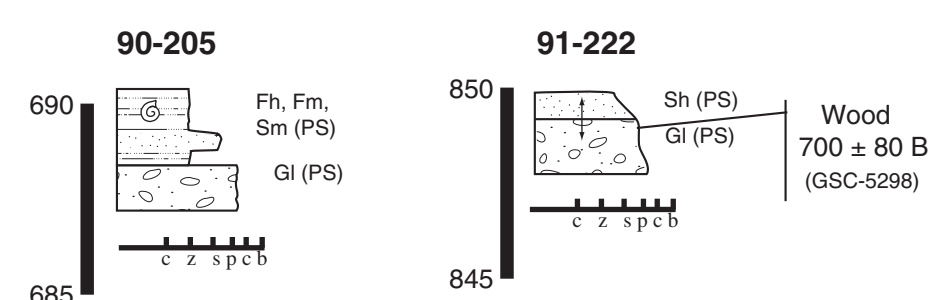

South-central region

Pinchi Creek lens: stratotype

Postglacial sediments

Grain-size scale for logs: c-clay, z-silt, s-sand, p-pebble, c-cobble, and b-boulder.

Figure 39. Stratigraphic sections and stations from the study area.
