

Appendix II
Part A: Sample Location and Description

Note:

Class (till)

- Class 1: till collected from fresh mudboil with little oxidation, no organic cover and no marine shells
- Class 2: till collected from mudboil, showing some sign of oxidation (rotten clasts, Fe-Mn oxide staining); may contain discrete pieces of organic matter and a few broken shells
- Class 3: oxidized till or glaciomarine diamicton collected from mudboil or below thin organic cover; till shows strong oxidation and/or washing of fines by waves and currents; diamicton contains abundant shells on surface and at depth; may contain thin lens of organic matter

Texture

Visually determined in the field. For more quantitative analysis, refer to Appendix XIII.
