

Fossils

The illustration depicts a vibrant prehistoric marine environment. A large, orange and white ammonite shell is the central focus, floating in the water. Below it, a large, green, spiral-shaped ammonite shell rests on the seabed. In the foreground, a large, blue, segmented trilobite is shown. To the left, a large, green, branching fossil is visible. The background features a sunset or sunrise sky with orange and yellow hues. The scene is framed by a thick orange border. Various other fossils are scattered around the main scene, including a small, green, branching fossil in the top left, a small, orange, branching fossil in the top right, a small, green, branching fossil in the bottom left, and a small, orange, branching fossil in the bottom right. A small, circular logo with the text 'CANADA 1982' and 'GEOLOGICAL SURVEY OF CANADA' is located in the bottom center.
