NON-RENEWABLE MINERAL AND ENERGY RESOURCE
POTENTIAL OF PROPOSED EXTENSIONS TO
NAHANNI NATIONAL PARK RESERVE,
NORTHERN CORDILLERA, NORTHWEST TERRITORIES

Edited by C.W. Jefferson¹ and W.A. Spirito¹

Table of Contents

	page
Table of Contents	iii
1. Executive Summary	1-1
<i>1.1. Mineral Resource Assessment of the Ragged Ranges and Nahanni Karst – Tlogotsho Plateau Study Areas, South Nahanni River Region</i>	<i>1-2</i>
<u>Broken Domain</u>	1-6
<u>Horn Domain</u>	1-6
<u>MacDonald Domain</u>	1-6
<u>Mackenzie Domain</u>	1-6
<u>Mattson Domain</u>	1-7
<u>Meilleur Domain</u>	1-7
<u>Ragged Domain</u>	1-7
<u>Sombre Domain</u>	1-7
<i>1.2. Oil and Gas Resource Assessment of the Ragged Ranges and Nahanni Karst – Tlogotsho Plateau Study Areas, South Nahanni River Region.....</i>	<i>1-7</i>
<i>1.3. Caveats</i>	<i>1-9</i>
2. Introduction	2-1
2.1. MERA Terms of Reference	2-2
2.2. Geographic Setting, MERA Study Areas and Features of National Park Interest	2-2
2.3. History and Method of NNPR MERA Studies	2-5
2.4. Confidence in this Assessment.....	2-7
2.5. Organization of this Report and Responsibilities of the Authors	2-11
2.6. Acknowledgments	2-12
3. Geological Setting.....	3-1
3.1. Rock Packages.....	3-1
3.1.1. Basinal shale-dominated and transitional Neoproterozoic strata.....	3-5
3.1.2. Platformal and transitional carbonate - clastic Neoproterozoic strata	3-6
3.1.3. Basinal shale-dominated & transitional Early Paleozoic strata.....	3-7
3.1.4. Platformal carbonate and clastic Early Paleozoic strata	3-9
3.1.5. Basinal shale-dominated and Transitional Late Devonian and younger strata....	3-9
3.1.6. Platformal clastic-dominated Late Devonian and younger strata	3-10
3.1.7. Cretaceous intrusions	3-10
3.1.8. Quaternary - unconsolidated glacial and alluvial deposits	3-11
3.2. Metamorphism.....	3-14
3.3. Tectonism and Paleogeography.....	3-14
3.4. Definition of resource assessment domains for minerals and coal	3-15
3.5. Geological features of public interest	3-18
4. Regional Surficial Geochemistry.....	4-1
4.1. Introduction and Background	4-1
4.1.1. History of geochemical studies in Nahanni region.....	4-1
4.1.2. Principles of stream sediment sampling	4-2

<u>Stream silts</u>	4-3
<u>Heavy mineral concentrates (HMCs)</u>	4-3
4.2. <i>Sample Collection, Preparation and Analysis</i>	4-5
4.2.1. <i>Sample collection for the Nahanni mineral resource assessment</i>	4-5
<u>Collection of silts for silt and HMC analysis</u>	4-9
<u>Collection of pebbly sands for HMC analysis</u>	4-10
<u>Collection of bulk samples</u>	4-10
4.2.2. <i>Sample preparation in the laboratory</i>	4-10
<u>Preparation of silt samples</u>	4-10
<u>Preparation of HMCs from silt samples</u>	4-11
<u>Preparation of HMCs from pebbly sands</u>	4-13
<u>Preparation of bulk samples</u>	4-13
4.2.3. <i>Analytical methods</i>	4-14
<u>Precision and accuracy</u>	4-14
<u>The risk of contamination</u>	4-14
<u>Treatment of gold grains</u>	4-15
4.3. <i>Statistical analysis</i>	4-15
4.3.1. <i>Statistical methods for Nahanni data</i>	4-15
4.3.2. <i>Geochemical data below detection limit</i>	4-16
4.3.3. <i>Maximum likelihood estimation (MLE)</i>	4-16
<u>How are MLEs derived?</u>	4-17
<u>Maximum likelihood (ML) estimation of Nahanni data</u>	4-18
4.3.4. <i>Elements used in statistical analysis</i>	4-18
4.3.5. <i>Tests for normality</i>	4-18
4.3.6. <i>How sample mean and standard deviation can be used</i>	4-18
4.3.7. <i>Calculation of percentile values to classify the original data</i>	4-19
4.3.8. <i>Regression analysis</i>	4-28
<u>A linear first-order regression model</u>	4-28
<u>Application to Nahanni stream sediment geochemical data</u>	4-29
<u>The significance of regression results</u>	4-32
<u>Predicted background values for 100% of each rock type</u>	4-32
4.4. <i>Spatial analysis</i>	4-33
4.4.1. <i>Geographic information systems (GIS)</i>	4-33
4.4.2. <i>Catchment basin analysis</i>	4-34
4.4.2. <i>Removing the effect of rock type</i>	4-35
4.5. <i>Gold Results</i>	4-36
4.5.1. <i>HMCs from Silt Samples</i>	4-36
4.5.2. <i>Placer Gold from pebbly sand samples</i>	4-36
4.5.3. <i>Placer Gold from Silts</i>	4-37
4.5.4. <i>Heavy Mineral Point Count</i>	4-39
4.5.5. <i>Sources of gold</i>	4-41
4.6. <i>Discussion of surficial geochemistry results</i>	4-42
4.6.1. <i>Mineral potential from geochemistry - Ragged Ranges</i>	4-43
4.6.2. <i>Mineral potential from geochemistry - Nahanni Karst / Tlogotsho Plateau</i>	4-56
4.7. <i>Conclusions from stream sediment geochemistry studies in Nahanni region</i>	4-67
4.7.1. <i>Stream silts vs. heavy mineral concentrates</i>	4-67
4.7.2. <i>Statistical techniques</i>	4-75
4.7.3. <i>Mineral potential from stream sediment geochemistry</i>	4-75

5. The Application Of Spring Water Geochemistry And Hydrogeology To Mineral Resource Assessment Of The South Nahanni River Region	5-1
5.1. Introduction	5-1
5.1.1. Background - spring sampling as an assessment tool	5-1
5.1.2. Previous hydrogeologic studies in the Nahanni region	5-1
5.1.3. Hydrogeologic objectives and scope	5-3
5.2. Hydrogeologic setting	5-4
5.2.1. Controls on groundwater recharge, flow and discharge	5-4
5.2.2. Hydrochemical influences	5-5
5.3. Hydrogeology methods and data collected	5-5
5.4. Classification of springs	5-6
5.4.1. Introduction to classification methods	5-6
5.4.2. Field classification	5-7
5.4.3. Kleiner-Hartigan Trees - grouping by hydrogeochemical pattern recognition	5-7
5.4.4. Cluster analysis	5-9
5.4.5. Discussion of individual classifications	5-14
5.4.6. Comparisons among groups	5-15
5.5. Final spring groups, hydrogeochemical processes and resource assessment in the study areas	5-15
5.5.1. Introduction	5-15
5.5.2. Group A – Kraus Hot Springs at Clausen Creek	5-16
5.5.3. Group B - Acidic, high SO_4^{2-} springs	5-19
<u>Subgroup B1 - Metalliferous springs in the Meilleur River area</u>	5-20
<u>Subgroup B2a - Metalliferous springs in Ragged Ranges study area</u>	5-22
<u>Subgroup B2b - Metalliferous springs discharging from the Mattson Formation</u>	5-24
5.5.4. Group C - High pCO_2 springs in the Flat River Valley	5-25
5.5.5. Group D - High discharge TDS springs in carbonate terrane	5-28
<u>Subgroup D1a - Fault localized thermal springs</u>	5-29
<u>Subgroup D1b - Other D1 springs</u>	5-31
<u>Subgroup D2 - Moderate TDS springs in carbonate terrain</u>	5-31
5.5.6. Group E - Thermal springs related to quartz monzonite	5-32
5.5.7. Group F - Low TDS spring and surface waters	5-34
5.6. Hydrogeochemical conclusions	5-35
5.6.1. Classification of springs	5-35
5.6.2. Details of final spring water classification (see also Table 5.5)	5-36
5.6.3. Anomalous springs and areas of special interest	5-36
6. Mineral Occurrences and Geochemical Anomalies	
6.1. Mineral showings of proposed extensions to NNPR	6-1
6.2. Gemstones – new to the region	6-1
6.3. Geochemical Anomalies	6-2
6.4. Ragged Ranges Metallotects	6-9
6.5. Nahanni Karst - Tlogotsho Plateau: Placer Gold	6-15
6.6. Nahanni Karst - Tlogotsho Plateau: Sedex Zinc-Lead, Meilleur River Area	6-15
6.7. Nahanni Karst - Tlogotsho Plateau: other geochemical associations	6-17

6.8. Summary of Metallotects, Proposed Expansions to Nahanni National Park Reserve	6-17
7. Mineral Resource Assessment of the Tlogotsho Plateau, Nahanni Karst, Ragged Ranges and Adjacent Areas Under Consideration for Expansion of Nahanni National Park Reserve, N.W.T.	
7.1. Resource Assessments - Past and Present.....	7-1
7.2. Qualitative Assessments of Mineral Potential by Deposit Models in Domains	7-1
7.2.1 Placer gold.....	7-2
7.2.2 Coal	7-2
7.2.3 Sedex lead-zinc-silver	7-3
7.2.4 Sedimentary nickel sulphides.....	7-3
7.2.5 Mississippi Valley-type lead-zinc.....	7-4
7.2.6 Lode gold	7-4
7.2.7 Vein silver-lead-zinc	7-5
7.2.8 Skarn tungsten	7-6
7.2.9 Skarn lead-zinc-silver	7-6
7.2.10 Emerald associated with bituminous sedimentary rocks	7-7
7.2.11 Emeralds associated with skarns	7-8
7.2.12 Other Gems	7-8
7.2.13 Granitic pegmatite-hosted rare metals	7-9
7.3. Mineral deposit types of low to very low potential in the S Nahanni R. region	7-9
8. Petroleum Resource Assessment of the Tlogotsho Plateau, Nahanni Karst, and Adjacent Areas Under Consideration for Expansion of Nahanni National Park Reserve, Northern Cordillera and District of Mackenzie	
8.1. Abstract	8-1
8.2. Hydrocarbon assessment background.....	8-1
8.3 Geology of the Liard hydrocarbon assessment domain	8-3
8.3.1 Neoproterozoic successions.....	8-5
8.3.2 Cambrian, Ordovician and Silurian	8-5
8.3.3 Devonian.....	8-5
8.3.4 Carboniferous	8-6
8.3.5 Permian and Triassic.....	8-7
8.3.6 Cretaceous	8-7
8.3.7 Structure	8-7
8.4 Petroleum Systems	8-9
8.5 Exploration History	8-9
8.6 Petroleum Occurrences	8-13
8.6.1 Discovered reserves	8-13
8.6.2 Petroleum shows.....	8-14
8.6.3 Previous petroleum potential assessments.....	8-16
8.7 Petroleum Resource Assessment	8-20
8.7.1 Method	8-20
8.7.2 Petroleum systems analyses	8-21
8.7.3 Play-based assessments of petroleum potential.....	8-21
8.7.4 The Geo-anchored method.....	8-22
8.7.5 Historical vindication of sequential sampling assessment methods	8-22

8.7.6 Reservoir volume methods	8-23
8.7.7 Play definition	8-25
8.7.8 Sequential sampling method (geo-anchored discovery history analysis)	8-26
8.7.9 Play reservoir volume and multivariate analysis calculations	8-28
8.8 Discussion	8-31
8.9 Implications and Recommendations for NNPR and Proposed Extensions	8-34
8.9.1 Factors favourable for the sterilization of the proposed park reserve extensions	8-35
8.9.2 Access for scientific and engineering studies in the park reserve	8-36
8.10 Conclusions	8-36
