Note 1: after a representative heavy mineral slide was made, HMCs were re-combined with the relatively light “heavy” minerals that were removed by MI from the tabled HMCs before submission for NAA analysis
Note 2: magnetic fraction removed before MI, stays out for NAA

Table A-3.2(ii). Descriptive terms for gold grains.

GRAIN SHAPES

Pristine

- undamaged primary shapes with smooth surfaces;
- fine wires, fracture fillings, thin angular flakes & blebs;
- clean grain moulds retaining shapes of other minerals;
- crystals (although some may be authigenic in soils);
- if abundant, may indicate short glacial transport.

Curled

- primary shapes visible, but edges and wires bent;
- grain moulds preserved in protected areas;
- may indicate intermediate glacial transport.

Rounded

- primary shapes destroyed
- grains have well rounded outlines
- surfaces are porous and scaly, some are striated;
- indicate long transport or recycling.

SURFACE TEXTURES

Smooth

- bright in reflected light;
- roughness near 0.1 micron under SEM;
- only seen on primary surfaces.

Grain moulds

- molds of gangue minerals in gold;
- grains were broken or weathered out;
- probably held sulphides or carbonates;
- only seen on pristine or curled grains.

Striated

- striae 1.0 to 0.1 microns across;
- sets of crosscutting striae common;
- seen on curled and rounded grains;
- some are damage from sampling and sample processing;
- most prove glacial transport.

Porous

- fine pores, about 0.1 micron in diameter;
- found only on scaly, rounded grains;
- only penetrate silver-depleted rims of grains produced during leaching of silver by groundwater or soil water
- penetrate older textures, e.g. striae;
- indicates a period of weathering, usually postglacial.

^a $le = 2000R/L$; where R = radius of the curvature of the most pointed part of the grain, and L = length of the grain (Sphere : $le = 1000$).

^b gold grains recovered from the 177-250 µm fraction.

^c gold grains recovered from the 250-850 µm fraction.

^d grains recovered from batea concentrate.
