

**DESCRIPTIVE NOTES**

The National Map of the Central Metasedimentary Belt for parts of eastern Ontario and western Quebec is one of a series of maps produced by the Geological Survey of Canada (GSC) as part of the National Geospatial Database (NGD) project. The NGD is a national geospatial database that provides a consistent and accurate representation of the earth's surface. The data for this map were derived from airborne gamma ray spectrometry (AGRS) data collected in 1997 and 1998. The AGRS data were processed and calibrated to provide a consistent and accurate representation of the earth's surface. The data were then processed and calibrated to provide a consistent and accurate representation of the earth's surface. The data were then processed and calibrated to provide a consistent and accurate representation of the earth's surface.
