

DESCRIPTIVE NOTES

The Radioactivity Map of Manitoba is one of a set of eight 1:500,000 regional compilation maps that indicate the equivalent uranium radioactivity levels in the province of Manitoba. The data for these maps were derived from the results of the 1990s Uranium Geochemical Survey of Manitoba (UGSM) and the 1990s Uranium Geochemical Survey of Ontario (UGSO). The maps were compiled using the results of the UGSM and UGSO, and the results of the 1990s Uranium Geochemical Survey of Saskatchewan (UGSS) and the 1990s Uranium Geochemical Survey of Alberta (UGSA). The maps were compiled using the results of the UGSM and UGSO, and the results of the 1990s Uranium Geochemical Survey of Saskatchewan (UGSS) and the 1990s Uranium Geochemical Survey of Alberta (UGSA). The maps were compiled using the results of the UGSM and UGSO, and the results of the 1990s Uranium Geochemical Survey of Saskatchewan (UGSS) and the 1990s Uranium Geochemical Survey of Alberta (UGSA).

Geophysical compilation by J.M. Cannon, P.R. Holmer, and K.L. Ford
Digital cartography by B. Blanchard-Felix, Data Dissemination Division (DDO)

This map was produced from processes that conform to the Scientific and Technical Publishing Branch (STPB) Quality Management System, registered to the ISO 9001:2000 standard.

Any additions or additional geological information known to the user would be welcomed by the Geological Survey of Canada.

Digital base map at the scale of 1:500,000 from the Digital Chart of the World (DCW) from Environmental Systems Research Institute (ESRI), with modifications by DDO.
