

Figure 4. Similar to Figure 3 but scale is enlarged. Detailed distribution of circulation times (blue bars) corresponding to (a) 473 out of 523 logged intervals and (b) 385 out of 425 logged intervals with corrected BHT values (excludes values where t_c assumed to be 4 hours) for the Beaufort-Mackenzie Basin. Cumulative distribution curves shown in red. Median t_c values are (a) 6 hours and (b) 5.3 hours.
