GEOLOGICAL SURVEY OF CANADA | COMMISSION GÉOLOGIQUE DU CANADA

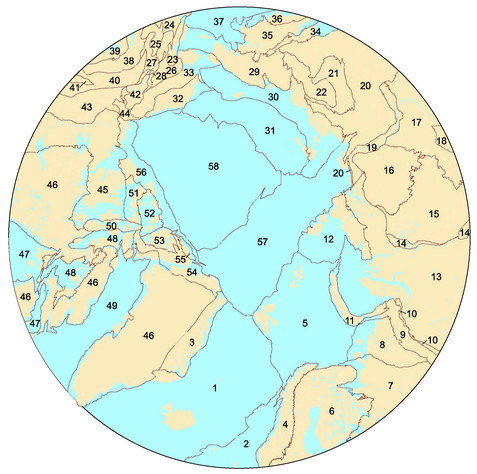
PHANEROZOIC GEOGRAPHIC REGIONS
(see correlation chart, Sheets 4 and 5)



Arctic-North Atlantic region
1. Iceland, North Atlantic, East Greenland volcanic belt
2. Faroe Islands, Shetland Platform
3. Caledonides: East Greenland
4. Caledonides: Scandinavia
5. Svalbard, Barents Shelf

East European Platform, Ural Mountains
6. Fennoscandian Shield, Gulf of Bothnia, Oslo graben
7. Russian Plate
8. Timan fold belt, Pechora Plate
9. Urals foredeep, Western Ural Mountains
10. Eastern Ural Mountains
11. Pai-Khoi, Novaya Zemlya

West Siberian Basin, Siberian Platform
12. North Kara Plate, Taimyr-Severnaya Zemlya fold region
13. West Siberian Plate, South Kara depression, Yenisei-Khatanga Trough
14. Yenisei fold-thrust belt, Tunukhansk-Noril'sk fold-thrust belt
15. Tunguska depression
16. Anabar-Olenek uplift
17. Lena-Vilyui depression
18. Baikal-Patom fold-thrust belt

Verkhoyansk-Kolyma region
19. Verkhoyansk foredeep
20. Yana-Kolyma fold-thrust belt, western Okhotsk-Chukhotsk volcanic belt
21. Chersky-Polousnenesk fold-thrust belt
22. Alazeya-Oloi fold belt, Dzhakhtarskii-Oloi volcanic belt

Interior western Alaska
23. Western Basin
24. Arkikun Mountains
25. Southwest Basin
26. Yukon-Koyukuk Basin
27. Medfra-Kantishna region
28. Ruby region

Brooks Range, Chukotka, Arctic Shelf
29. Chukotka deformed belt, eastern Okhotsk-Chukhotsk volcanic belt
30. Novosibirsk Plate
31. East Arctic Plate
32. Alaska North Slope
33. Brooks Range, Seward, western Chukotka

Okhotsk, Bering Sea, Pacific Alaska
34. Uda-Murgal fold belt, Gizhiga depression, Oklan-Penzhina volcanic belt
35. Koryak-west Kamchatka fold belt, central Kamchatka volcanic belt
36. Olyutor-Kamchatka fold belt, eastern Kamchatka volcanic belt
37. Bering Sea Basin
38. Alaska Range
39. Coast Mountains

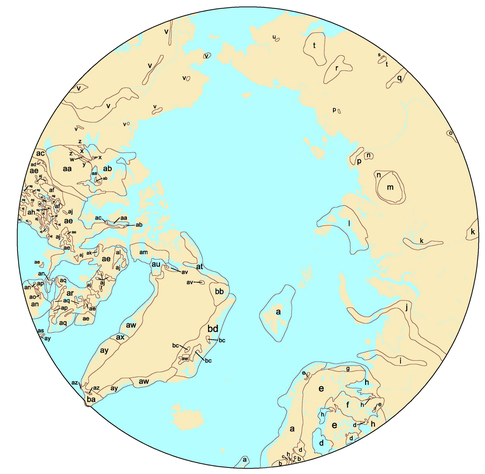
Eastern Alaska, Yukon, Mackenzie region
40. Yukon-Tanana upland
41. Intermontane Belt
42. Yukon Flats, Old Crow Basin
43. Selwyn Mountains, Mackenzie Mountains
44. Mackenzie Plain

Canadian Shield, Greenland Shield, and cover
45. Interior Platform, Arctic Platform, M'Clintock Basin
46. Canadian Shield, Greenland Shield
47. Hudson Bay Basin, Hudson Strait Basin
48. Foxe Basin, Prince Regent Basin
49. Baffin Bay-Labrador Sea basins, West Greenland volcanic belt

Innuitian region, North Greenland
50. Boothia uplift, Cornwallis fold belt
51. Parry Islands fold belt, Cannobert fold belt
52. western Sverdrup Basin
53. eastern Sverdrup Basin, Eurekan Orogen
54. Ellesmere-North Greenland fold belt
55. Pearya, north Ellesmere Island

Arctic Ocean
56. Mackenzie Delta, Beaufort Sea, Arctic Coastal Plain
57. Lomonosov Ridge, Laptev Sea Basin, Eurasian Basin
58. Alpha Ridge, Mendeleev Ridge, Amerasian Basin

GEOLOGICAL DOMAINS HOSTING PRECAMBRIAN UNITS
(see correlation chart, Sheet 3)



Northern Europe
- a. Caledonian Orogen (Northern Europe, undivided)
- b. Sveconorwegian Orogen
- c. Gothian Domain
- d. Dala-Rapakivi Domain
- e. Svecofennian and Lapland-Kola orogens
- f. Karelian Craton
- g. Murmansk Craton
- h. Fennoscandian Shield-Gulf of Bothnia-Oslo graben
- i. Timan fold belt
- j. Urals folded region

North Asia
- k. Yenisei-Turukhansk-Noril'sk fold-thrust belt
- l. Taimyr-Severnaya Zemlya fold region
- m. Anabar Shield
- n. Anabar-Olenek uplift
- o. Baikal-Patom fold-thrust belt
- p. Yana-Kolyma fold-thrust belt
- q. Sette-Daban folded system
- r. Chersky-Polousnenesk fold-thrust belt
- s. Okhotsk massif
- t. Omolon massif
- u. Okhotsk folded region

North America
- v. Cordilleran Orogen (Canada - Alaska, undivided)
- w. Hottah terrane
- x. Great Bear batholith
- y. Hepburn batholith
- z. Wopmay Orogen
- aa. Slave Craton
- ab. Hornby Bay and Amundsen basins
- ac. Tattaron-Thelon Orogen
- ad. Nonacho Basin
- ae. Rae Craton (Canada)
- af. Thelon Basin
- ag. Nueltin suite
- ah. Hearne Craton
- ai. Baker Lake Basin
- aj. Hudson suite
- ak. Fury and Hecla Basin
- al. Borden Basin
- am. Ellesmere-Inglefield belt (Canada)
- an. Superior Craton
- ao. Purtuniq ophiolite
- ap. Narsajuaq Arc
- aq. Meta-Incognita microcontinent
- ar. Cumberland batholith
- as. Burwell Arc
- at. Ellesmerian Orogen (Canada and Greenland)

Greenland
- au. Thule Supergroup (Greenland and Canada)
- av. Ellesmere-Inglefield belt (Greenland)
- aw. Rae Craton (Greenland)
- ax. Aasiaat Domain
- ay. North Atlantic Craton (Greenland and Canada)
- az. Gardar Province
- ba. Kelidian Orogen
- bb. Independence Fjord Group
- bc. Eleonore Bay Supergroup
- bd. Caledonian Orogen (Greenland, undivided)

ONSHORE AND OFFSHORE UNITS

- Unit occurs both onshore and offshore
- Unit occurs onshore
- Unit occurs offshore

COMPOSITIONAL UNITS AND ROCK TYPES
(all sheets)

PATTERN*	COMPOSITIONAL UNITS	EXAMPLE ROCK TYPES
CmD1	**Supracrustal rocks** Sedimentary and/or volcanic: undivided	Sedimentary and/or volcanic rock: undivided
	Sedimentary	
Ng1	Sedimentary: undivided	Sandstone, siltstone, shale, limestone
Ng15	Clastic: continental	Redbeds, quartz arenite, arkose, conglomerate, evaporites
Kfg3	Clastic: deltaic and nearshore	Sandstone, siltstone, shale, coal; plant fossils
D41	Clastic: shallow marine	Sandstone, siltstone, shale; marine fossils
D20	Evaporite	Salt, anhydrite, gypsum, dolostone
J40	Carbonate	Limestone, dolostone, shale, evaporites, chalk carbonate reefs
Ng24	Sedimentary: slope and deep water	Shale, chert, iron-formation, greywacke, turbidite, argillaceous limestone, matrix-supported conglomerate
SD7	Marine sedimentary: undivided	Limestone, dolostone, shale, evaporites, chalk, shale, iron-formation, greywacke, turbidite, argillaceous limestone, matrix-supported conglomerate, carbonate reefs
	Igneous	
C26	Igneous: undivided	Igneous complex; volcanic and subvolcanic rocks
	Extrusive	
P36	Extrusive: undivided	Volcanic rocks, lava flows, pyroclastic debris
T51	Extrusive: alkalic	Trachyte, phonolite, carbonatitic lavas, leucitic volcanic rocks
D45	Extrusive: felsic	Rhyolite, felsic tuff, felsic pyroclastic rocks, felsic agglomerate
PgK2	Extrusive: intermediate	Dacite, latite, andesite, rhyolite, related pyroclastic rocks
K17	Extrusive: mafic	Basalt, olivine basalt, thyolelite, alkali basalt, basanite, pillow basalt, flood basalt
Kfg5	Extrusive: ultramafic	Komatiite, nephelinite, picrite, basalt
	Intrusive	
CmD09	Intrusive: undivided	Plutonic rocks, intrusive complex, batholith
K18	Intrusive: granitic	Granite, monzogranite, quartz monzonite, leucogranite, alkalic granite, alaskite
P42	Intrusive: tonalitic-granodioritic	Monzonite, quartz monzonite, granodiorite, diorite, tonalite, granitoid rocks
SD11	Intrusive: gabbroic	Gabbro, olivine gabbro, diabase, norite, quartz norite, diorite, tonalite
PrD12	Intrusive: peridotitic	Pyroxenite, peridotite, dunite, harzburgite, wherlite, gabbro
J7	Intrusive: anorthositic	Anorthosite, gabbroic anorthosite
CmD11	Intrusive: syenitic	Syenite, lamprophyre, minnete, foid syenite
K22	Intrusive: kimberlitic	Kimberlite, lamproite
T25	Intrusive: carbonatitic	Carbonatite
	Other compositions	
PzK13	Mélange	Mélange, polymict breccia, accretionary wedge complex
PgS3	Impact structure	Impact breccia, impact melt rock, crater fill
PrD8	Metamorphic: undivided	Schist, gneiss, migmatite, diatexite, tectonite, mylonite, granulite

* Certain compositional units have a distinctive pattern overlay as indicated in this column. Other units have a distinct colour fill only. Unit colours and labels shown only as examples.

METAMORPHIC CONDITIONS
(see correlation chart, Sheets 4 and 5)

SYMBOLOGY*	DESCRIPTION	EXPLANATION	EXAMPLE ROCK TYPES
Pz	Not specified		
Pz 1	1: Not metamorphosed	Rocks have experienced temperatures low enough to still allow for the generation of liquid or gaseous hydrocarbons	Lignite, shale, sandstone, diabase, basalt, granite
Pz 2	2: Metamorphosed and not metamorphosed	Contains both metamorphosed and not metamorphosed rocks over the extent of the mapped unit	Coal, limestone, argillite, quartzite, diabase, basalt, granite
Pz 3	3: Metamorphosed	Rocks of varying metamorphic grade are present	Slate, marble, phyllite, schist, quartzite, granitic gneiss
Pz 4	4: Metamorphosed; very low and low grade	Prehnite-pumpellyite to and including greenschist facies	Anthracite, slate, phyllite, greenstone, serpentinite, quartzite, marble
Pz 5	5: Metamorphosed: medium grade	Amphibolite facies	Graphitic rocks, mica schist, amphibolite, metagabbro, granitic gneiss, migmatite, quartzite, marble, andalusite and kyanite gneisses
Pz 6	6: Metamorphosed: high grade	Granulite facies	Granulite, orthopyroxene gneiss, pyrrhotite, eclogite, migmatite, sillimanite and kyanite gneisses
Pz 7	7: Metamorphosed: high pressure	Blueschist: glaucophane-lawsonite facies	Blueschist, eclogite

* Metamorphic condition varies widely between regions. Numeric keys (1 to 7) to metamorphic grade are located on the Phanerozoic correlation chart in the lower right corner of the legend box for selected map units (Sheets 4 and 5). No key indicates that the metamorphic attribute was not specified.

MAP SYMBOLS

- Geological contact (approximate)
- Unclassified fault (onshore, offshore)
- Thrust fault (teeth on hanging wall; onshore, offshore)
- Normal fault (hachures on downthrown side; onshore, offshore)
- Reverse fault (teeth on hanging wall; onshore, offshore)
- Strike-slip fault (arrows indicate relative movement; onshore, offshore)
- Active spreading ridge (offshore); axis of postglacial volcanic activity (onshore, Iceland)
- Extinct spreading ridge
- Diapir (salt or shale)
- Impact structure
- Kimberlite, kimberlitic lamprophyre, lamproite
- Volcano, cinder cone, lava dome
- Bathymetric contour
- Ice thickness contour

Depth in metres below General Bathymetric Chart of the Oceans (GEBCO) 2003 datum; variable contour interval.
Ice thickness in metres (Greenland); 250 m contour interval.
