PROTEROZOIC (2000-440 Ma)																																																		
NEOPROTEROZOIC (1000-440 Ma)																																																		
Ediacaran (635-542 Ma)																																																		
Cryogenian (850-720 Ma)																																																		
Tonian (1000-850 Ma)																																																		
MESOPROTEROZOIC AND NEOPROTEROZOIC (440-1000 Ma)																																																		
MESOPROTEROZOIC (1000-1600 Ma)																																																		
late Mesoproterozoic (1070-1000 Ma)																																																		
middle and late Mesoproterozoic (1000-1070 Ma)																																																		
early and middle Mesoproterozoic (970-1000 Ma)																																																		
early Mesoproterozoic (1000-1070 Ma)																																																		
PROTEROZOIC AND NEOPROTEROZOIC (440-2000 Ma)																																																		
late Paleoproterozoic and early Mesoproterozoic (1600-1900 Ma)																																																		
late Paleoproterozoic (Strophomena) (1600-1900 Ma)																																																		
middle and late Paleoproterozoic (Oriskany and Baraboo) (1600-1900 Ma)																																																		
middle Paleoproterozoic (Ontonagon) (2000-1600 Ma)																																																		
late Paleoproterozoic (Strophomena) (1600-1900 Ma)																																																		
early and middle Paleoproterozoic (Gribbles) (2000-1600 Ma)																																																		
late Paleoproterozoic (Rhyolite) (2000-1600 Ma)																																																		
middle Paleoproterozoic (Strophomena) (2000-1600 Ma)																																																		
ARCHEAN AND PROTEROZOIC																																																		
ARCHEAN AND PALEOPROTEROZOIC (4000-1600 Ma)																																																		
ARCHEAN (4000-2000 Ma)																																																		
NEOARCHAIC (2000-3800 Ma)																																																		
MESOARCHAIC AND NEOARCHAIC (2000-3800 Ma)																																																		
MESOARCHAIC (2000-3800 Ma)																																																		
EOARCHAIC AND NEOARCHAIC (3800-4000 Ma)																																																		

**EXPLANATORY NOTES**  
 Sheet 3 presents the legend and correlation chart for the Proterozoic time scale of the International Geologic Map (IGMP) project. The legend includes symbols for geological periods, stages, and sub-stages. The correlation chart shows the relationship between the Proterozoic time scale and the International Geologic Map (IGMP) project. The legend and correlation chart are essential for interpreting the geological data presented in this sheet.
