
The representations of political features on this map does not necessarily reflect the position of the Government of Canada on international issues of recognition, sovereignty, or jurisdiction

ACKNOWLEDGMENTS

This compilation is a joint project between the Geological Survey of Canada's World Minerals Geoscience Database Project and the International Association for the Genesis of Ore Deposits' Working Group on Tin and Tungsten Deposits. The compilers would like to thank their respective organizations for support as follows:

Central Canada Division, Geological Survey of Canada (W.D. Sinclair)
Far East Geological Institute, Russian Academy of Sciences (G.A. Gunnchuk, P.G. Korostelev, B.I.Semenyak)
Institute of Tectonics and Geophysics, Russian Academy of Sciences (S. Rodionov)
Natural History Museum, United Kingdom (R. Sathiesan)
Charles University, Czech Republic (M. Štemprok)

Thanks also to the staff of the Data Dissemination Division (DDD), Mapping Information Branch, Earth Sciences Sector, Natural Resources Canada for technical, cartographic and library services.

The complete Arcexplorer database in GIS (ESRI shape files and Google Earth (kml) format can be obtained over the Internet from an Interactive map portal at: http://gdr.nrcan.gc.ca/index_e.php
When presented with a list of data types, scroll down to Mineral Deposits and select the link, Launch application (one step), or choose Mineral Deposit Databases and then select Mineral Deposits Web Map Application (two steps). Once the application is launched, select the Tin and Tungsten deposits layer from the left of the map window. A zipped file containing shape files and KML can now be downloaded by right clicking on Tin-Tungsten deposits in the Legend box below the map. Choose Save Target As from the pop-up menu, and save to your computer. Alternately you could go directly to the application using URL: http://apps1.gdr.nrcan.gc.ca/gcx_interactif/index_e.html?language=en#_h
However, this URL may change.

The geological backdrop of felsic and/or intermediate igneous domains subdivided by age was generated from the GIS data of Chorlton, L. B., 2007, Generalized geology of the world: bedrock domains and major faults in GIS format: a small-scale world geology map with an extended geological attribute database: Geological Survey of Canada, Open File 5535, 48 p., 1 CD-ROM.

Coastlines and drainage were obtained from the World Data Bank II topographic data set.

Political boundaries at a scale of 1:25 000 000 were obtained from ArcWorld, published by Environmental Systems Research Institute (ESRI), with modifications by DDD.

The World Minerals Geoscience Database Project was sponsored by Anglo American plc, BHP Billiton, Metal Mining Agency of Japan, Phelps Dodge Exploration Corporation, Rio Tinto Mining and Exploration Limited and Teck Cominco Limited.

This map was produced from processes that conform to the Scientific and Technical Publishing Services Subdivision (DDD) Quality Management System, registered to the ISO 9001: 2008 standard

Any revisions or additional geological information known to the user would be welcomed by the Geological Survey of Canada

Digital base map at the scale of 1:35 000 000 from ArcWorld data from Environmental Systems Research Institute (ESRI), with modifications by DDD

This publication is available from the Geological Survey of Canada Bookstore (http://gsc.nrcan.gc.ca/bookstore_e.php)
It can also can be downloaded free of charge from GeoPub (http://geopub.nrcan.gc.ca/)
